12/9/07 I recieved a call about contaminated water in our county from a concerned family member. They recieved this msg from a friend and it was immediately reported to me. I called our friend to get the specific details. Once I understood who/what/where... I called OEM at county levels..

RESULTS: I left a msg with the person in charge to get confirmation of this rumor. Greatfully there is no current threat. I asked a question: How long would it take to get test results on the water? aprox. 2 days. If there was a public health concern it would be reported thru the media! This contact would get reports county/state wide.. they would know if there were any issues!!

Campaigns: Government, State Government Department/Agency; Government, US/State Dept. of Health & Human Services (DHHS)
