Frontline: Inside Somalia: MSF malnutrition ward Is 'beyond full'
http://www.msf.org/msf/articles/2011/08/frontline-inside-somalia-msf-malnutrition-ward-is-beyond-full.cfm

The effects of ongoing drought in the Horn of Africa region have intensified the situation in Somalia, already precarious due to 20 years of violent conflict: food prices have gone up, livestock are dying, and humanitarian aid in the country is scarce. MSF's Marere Hospital in southern Somalia is the only health facility in the area. A Somali medical worker from Marere described the current crisis. Length: 8:29

UPDATE FROM THE WEBSITE:

Field News
Chile: MSF Assessing the Situation in Areas Most Affected by the Earthquake

As the Chilean authorities manage the response to the disaster, MSF is concentrating its efforts in the areas that are most difficult to access.
March 2, 2010

Several teams from Doctors Without Borders/Médecins San Frontières (MSF) are assessing the needs in the Maule and Bio Bio regions of Chile, both of which were hard hit by the 8.8-magnitude earthquake that struck last Saturday.

The earthquake's impact zone covers nearly 1,000 kilometers along Chile's coastal regions; many areas there have yet to be evaluated. Our teams are in contact with the Chilean government, which is managing the response to the disaster. MSF will focus its efforts in the more isolated areas that rescue workers have not yet reached.

An MSF team in the Concepción region is planning to travel today with Chilean authorities to assess the situation in the coastal area north of the city. Two other teams are covering the coast in the Maule region, both north and south of the town of Constitución. The MSF teams have also visited hospitals in Curicó and Chillán, both of which have received people wounded during the earthquake. MSF will support the hospitals through the distribution of medical supplies.

In its assessments, MSF workers observed significant damage in several areas, especially along the coast, which was hit both by the earthquake and the large waves it caused. But the damage does not seem to be as widespread, and the roads are in good

condition. In some villages, people are sleeping in the streets, either because they lost their homes or because the daily aftershocks have made them afraid to be inside.

MSF is also preparing a team of psychologists to provide mental health care to the population, as our workers have witnessed many people traumatized by the earthquake and subsequent tremors.

MSF already has 14 staff on the ground: a team consisting of doctors, nurses, logisticians and a coordinator from Argentina, Bolivia, Panama, Mexico and also Chile.

MSF Sends Teams to Chile to Evaluate the Situation After Today's Earthquake

MSF staff from Argentina and other parts of Latin America should start arriving this evening in Santiago de Chile to assess the needs of the population.
February 27, 2010

The medical–humanitarian organization Doctors Without Borders/Médecins San Frontières (MSF) is sending an exploratory team to assess the needs of the victims after an earthquake of 8.8 magnitude struck Chile early Saturday morning, causing serious damages in several areas of the country.

The MSF team, including a doctor, a nurse and logisticians coming from Argentina, Bolivia and Panama, is being deployed to Chile in order to better evaluate the needs of the population. The team from Argentina––composed of a doctor, a logistician and a nurse––should arrive Saturday night to the capital of the country, Santiago de Chile, crossing through the neighboring Argentine province of Mendoza.

For the moment, MSF doesn't have further direct information of the current situation in the most affected areas, but a staff member of MSF is already in Santiago and compiling information.

12/14/10 CHHN Update
130 pts total
15–20 pts staying overnight
2 deaths in last 24hr
CHHN gave 15 cases of chlorox and 200 pks of aquatabs 12/13/10
Say they need IV's, but actually have 500 bags. Still supported by MSF– last delivery was Dec. 11, 2010

12/8/10 From Karen with CCH
Bahon in the North between Grand Rivier and Pignon has 119 cases has a small Catholic clinic and small government clinic with minimal staff has 119 cases and 11 deaths. They are requesting stretchers to move patients down from the rural sections of Mountenwa, Bayi, and Bois–pins. They also have no to few supplies. CCH is working with MSPP in the area to get a specific needs list, but

1) ORS, Lactated ringers, aquatabs, antibiotics are desperately needed. Water source is river and a few wells.

12/7/10 From CHHN Report
Started seeing patients Nov. 10th. MSF supporting with supplies and staff since Nov. 30th
Have had 117 pts. total/ 19 staying overnight/ 1 death in last 24h

3 nurses, 3 aux nurses. Requesting 2 volunteers/ no room for accommodation
Needs: IVs, meds,
ALERT: Has no transport to pick up supplies

12/2/10 Email from Patty Gaines
Have not seen any cholera patients yet.
STAFF: 1 doc weekly on Sat. 9–2pm/ 2 RNs Mon–Fri.
Okay at present staff levels
Patty will be on the ground Dec. 4–8 and will check to make sure staff is getting cholera training
Uses DSI in Haiti for water system
Could p/u supplies in Cap Haitien if necessary.
Uses individual water systems– DSI in Haiti

5/19/11 Email from Kyle Denison Martin
There is some concern that there is a small outbreak occurring in the mountain communities of Seguin and Upper Macary. Dr. Clayton Bell and the Cloud Forest Medical Clinic (Baie d'Orange) have confirmed that there have been three deaths recently and an increase in cases near Parc Lavisite and Upper Macary.

On Sun, Jan 9, 2011 at 9:28 PM, Clayton Bell wrote:

HEAS,

We were able to confirm our river cholera samples from Mawiotie Bouret via a rapid test from MSF Spain. We are hoping to pick up a test kit tomorrow and start on a Cholera Recon Mission into the river valley where we obtained the initial hot tests. From there we will travel by foot East through the remote mountain villages and conduct recon as well as set up ORS Stations and distribute Aquatabs and education. We are so busy it would be impossible for us to make it down to Grand–Anse at this time. If you can bring the samples to us we will do it here for you (pending if we get the test kit). Cholera is very sensitive to acidity and heat. Boiling water for 1 min will kill the vibrio in infected water. I would boil for 5 min though and use aquatabs to be safe.

Also if someone can shoot me contact info for the Kenscoff Orphanage we can rendezvous in Kenscoff and test your water samples. We will be coming through early Thurs morning or Wed evening.

For the next 2–3 weeks we have volunteers lined up for the Cloud Forest Medical Clinic & CTC. As Jim mentioned we have seen 35 cholera cases here (25 admissions in the past 11 days). MSF Spain built us an amazing CTC facility, so we are well prepared for the expected surge of cases that we expect over the following 2–3 months. I want to start lining up volunteers for Feb & March now so please contact me or Kyle if you are interested.

We have no access to fuel within 1 1/2 hrs and are spending $21 on diesel per night. That will be $1,800 for the next 3 months. We can save a lot of money by obtaining some deep cell batteries (8–12) and an inverter. MSF Spain said they think they can possibly get the batteries, but an inverter and solar panels would be extremely beneficial as well.

We need motorbikes, 4 wheelers or rhinos to access these remote regions with speed and efficiency. We are hoping to purchase a 4x4 truck next week (compliments of Humanity First) which will make our logistic challenges much easier.

MSF Spain is also hooking us up with a GPS unit tomorrow to start marking recon locations, ORS Stations, infected water sources, infected villages, patient deaths, etc...

If you would like to volunteer or help contribute to our "Compe Kolera Campaign" in the Sud–Est MTNs contact me. The sheer breadth of our physical area and remoteness invites all NGOs to join in this cholera prevention, education and management mission. Because of our staff of medical volunteers which came in this evening, I will be freed up to do a remote Mountain Recon Mission for the following few days and will be out of contact.

Namaste,
Clayton Bell, MD

Cloud Forest Med Clinic & CTC
Humanity First USA
"Where the Stars Still Shine"
www.wherethestarsstillshine.org

1/8/11 Email from Dr. Clayton Bell
This is my first email in 5 days so here goes.

1. We have seen 31 cholera patients, 21 admissions in the past 11 days. 2 deaths. Most patients are from Seguin (NW 15 min hike) and Baie d'Orange(surrounding zone to our East and immediate North & South). Cases have come from all directions with a higher propensity from our mtns to the North and NW.

2. We are operating a fully functioning 20 bed CTC. It is equipped with everything (kitchen, log quarters, latrines, etc...) to classify it as a CTC. MSF was very clear with me about the classification. We expect to add 10–30 beds over the following 2–3 months. All data trends suggest we will continue to increases in cholera patients over the following 2–3 months. The rainy seasons begins in 2 months as well so things should crescendo at that point. We need to stockpile supplies now while things are still relatively quite.

3. We have 3 MSF National Nurses who are assisting us. MSF Spain will be sending 3 nurses per week to help out over the following few weeks. I called Dr Loubert from MSPP (Med Director of Marigot province) about more nurses. He has yet to call back. Will speak to his superior, Dr Deslouches, in the coming days. I am planning to hire 1–3 full time nurses but we will be in dire need of additional medical personnel in the upcoming weeks and esp months.

4. As Kyle previously mentioned. We are perfectly geographically and socially suited to launch a Forward Staging Reconnaissance Expedition.

Looking forward to meeting with you soon Jim and Ron. I have CCed Paul to this email. epidemiological questions can be directed towards him for the time being, then Kyle will be the man to speak with.

Namaste,
Clayton Bell, MD

Subject: FLASH REPORT: Possible contamination of Sud Est Mountain Region river

HEAS,

I'm relaying the below information to you courtesy of Dr. Clayton Bell of the Cloud Forest Medical Clinic / Seguin. As you may recall, the Seguin Plateau and points west, south, and east have reported cholera. Dr. Bell estimates they have now seen >25 cases locally with 2 fatalities seen by their medical providers. But with the discovery of Mawotie Bourette's 15–20 fatalities last week during his on–foot multi–hour expedition, this again highlights the high vulnerability of the isolated peoples of this region. Water samples tested by Dr. Bell's team at Mawotie Bourette tested positive (rapid test) for cholera, implying threat to all of the communities downriver. In the attached jpg image, Mawotie Bourette is highlighted east of Furcy, as is the suspected contaminated river, highlighted in BLUE.

Thanks to the hard work of MSF–Spain, Cloud Forest now has a CTC, however they are in need of nursing staff and community educators. This is not an insignificant challenge given the sheer breadth of area and challenges for transportation. Cloud Forest is in need of the following:

1. staffing– nurses
2. no local access to fuel
3. no access to ATVs or motorcycles to enable rapid surveying of villages distant from Cloud Forest
4. GPS units needed for village / event site mapping

We view Cloud Forest as a premier staging site for mountain recon, with interest in Furcy and several other secondary staging sites. This evaluation is ongoing. I will take the initiative to move this information to the HEAS ARO portal but ask that all members of the HEAS community in position to assist consider this information.

Thanks,

Jim

This site is not 'officially' designated as a 'CTC' on the latest PAHO list dated 12/13/10, however, it is set up as one per the email below dated 12/23/10 as advised by Dr. Clayton Bell.

Large Tent Needed for CFMC in Sud–Est
Tuesday, December 28, 2010 7:23 AM
From: "Kyle Denison Martin" <kdenisonmartin @ gmail.com>
To: haiti–epidemic–advisory–system@googlegroups.com, "Clayton Bell" <tonofearth7 @ yahoo.com>, "block_c" <block_c @ hotmail.com>

Hi everybody,

Dr. Clayton Bell and I are looking for a large tent that we could use
to set up a cholera treatment near the Cloud Forest Medical Clinic
(CFMC) in Baie d'Orange/Seguin (Sud–Est Department). Please contact
kdenisonmartin@gmail.com or tonofearth7@yahoo.com if you can help.

We are willing to come pick up the tent, if necessary. Thanks much!

In kindness,

Kyle Denison Martin
kdenisonmartin @ gmail.com

12/23/10 HEAS Watchboard note from Jim Wilson:

""Supply drop for 48 hrs' of materiel sent on 12/16. Will likely need very close monitoring given strategic location of site within vast Sud Est Mountain Trade Nexus".

Phone convo with Dr. Bell indicates situation deteriorating rapidly. Narrow window of time now to mobilize CTC assets, including personnel, to Cloud Forest Clinic as a staging site for Sud Est mountain region."

Re: Sud Est Mountain Region: Emergency Conditions Overview
Thursday, December 23, 2010 6:22 PM
From: "Clayton Bell" <tonofearth7 @ yahoo.com>
To: haiti–epidemic–advisory–system@googlegroups.com

The CTC in Seguin is up and running. Supplies are limited, initial estimates place supplies lasting for 10–20 acutely ill patients. We have set up the CTC in the local school over the holiday break. It currently has 15 beds and we have room to expand to nearly double that size, provided we receive more beds (cots).

Our current limiting factor is the rural landscape. We are focusing our efforts on actually getting the sick patients in the surrounding areas to our facility. We are heading out tomorrow in all directions to establish contacts in each village. We plan to then use these contacts for intel, education, and distributing supplies.
In a side note, we have acquired moto drivers who are willing to transport sick patients to the clinic.

If we can get personnel to the mountain to man the CTC it will free us up to head out via foot to establish mobile clinics. In an optimal scenario we could get a team of 2–3 personnel minimum to man the CTC. Then with 4 teams of 2 led by our local points of contact we could head out via motos, machines, and foot travel in the 4 cardinal directions traveling to the villages that are in need.

However, we will be unable to leave the CTC until we can get personnel to the mountain to assist in running the CTC. This is our greatest need.

Namaste,
Clayton Bell, MD

12/23/10
From: "James Wilson"
To" "Clayton Bell"
Cc: haiti–epidemic–advisory–system@googlegroups.com

Hi Clayton,

Thanks so much for this detailed report. It is much to our chagrin that we had, in fact, heard of "20 fatalities" in "Morotiere Bourette" from one of the Furcy elders– she was quite specific and emphatic they needed help emergently. Unfortunately, we were unable to get a GPS coordinate or any other map location for the village. That is not the only one either… It is very frustrating not to have an accurate mapping of the Sud Est mountain region.

We may want to approach the Catholic Church in Furcy to see if they would be willing to serve as a sister CTC to Seguin given the unbelievable logistical challenge we are seeing. Furcy has a helo LZ right next to the church (a soccer field).

In regards to reports of "hemorrhagic fever", we note the following:

1. All four serotypes of dengue are present in Haiti at hyperendemic levels. Theoretically, it is possible to see dengue hemorrhagic fever (DHF), however in the nearly 12 months of HEAS operations we have not seen a single report in Haitians and have not seen one epi intel report in years past stating the clinical presence of DHF. The going hypothesis, after checking with world experts in dengue epidemiology, is those of African descent may carry genetic traits as yet undefined that provide protection against severe dengue infection. Further, we have exited the major rainy season...

2. We have been unable to find documentation of yellow fever in Haiti in the last quarter–century.

3. Leptospirosis might be a consideration, however it is anecdotally associated with periods of flooding. We are largely out of the major rainy season.

I default to "cholera" until proven otherwise. Over the years our team has spent monitoring Africa, we have seen claims of "hemorrhagic" this or that associated with very bad (IDIS Cat 5) cholera epidemics in areas without medical support. People experiencing cholera with the perception of the situation being out of control (i.e. up to 50% fatality if untreated) and without hope of medical intervention often describe the situation in the most grave of terms and use explicatives that are non–routine and unusual for the community involved. Under such conditions, communities often disintegrate, meaning transient voluntary evacuation– which often facilitates the spread of the disease.

This region requires immediate, aggressive evaluation with mountain–ready expeditionary teams and multiple carefully considered CTC staging sites with helo LZs.

Cheers,
Jim

On Dec 23, 2010, at 9:10 PM, Clayton Bell wrote:

HEAS Colleagues,

> Today we hiked from the Cloud Forest Medical Clinic in Seguin over the mountains to the North and stopped in the mtn village of Carrefour Badjo. Badjo is situated about 1/2 way between Kenscoff and Seguin on the main trade route 101. A local community leader, Pastor Raymond, called a community health meeting and over 80 local villagers attended. We gave a 2 hr lecture on cholera which included an intensive Q & A session and handed out Aquatabs to all participants. We were able to ascertain knowledge that there have been 19 reported cholera deaths between Ti Boucan (village a 1 hr hike to the South from Badjo) and the Kenscoff area. The most alarming statistic was that 17 of these deaths have all been from the remote mtn village of Mawotye Bouret (Marotie Bourette, not sure of exact spelling). This village is apparently very isolated and a 2 hr hike to the East of Badjo. They have no medical personnel and have had much trouble getting their sick to a CTC. Villagers told me that many of their cholera patients had been sent to Fermate to receive healthcare (most likely to the Baptist Mission but I have not confirmed that with anyone who works there). The villagers in Badjo were very frightened about cholera and extremely eager to learn preventative measures. Today we also had 4 people delivering cholera prevention education and selling aquatabs at the Seguin Market which is attended by about 1,000 people every Thurs. Yesterday we had 2 teams deliver cholera prevention education to the market in Mabriole. Tomorrow we have 2 teams delivering education and aquatabs to the village of Fean Jean Noel and the large weekly market in Marigot/Peredo area.

> In the Seguin/Baie d'Orange region we had 4 confirmed cholera cases as of Tues. In 3 cases the patient had become infected in the Port–au–Prince region and brought the illness back with him. One case was a transfer from husband to wife; she needed 38 L LR & 1 L D5 to resuscitate her. Our 4th patient died in a convulsive vomitous fit within 10 min of me seeing him and hooking up 2 IVs. On Wed we had 3 children present to the clinic with cholera. One of the children is still here with us receiving ORS and food; his mother left him and has not returned. The cases we know of likely represent a very small proportion of actual cholera cases in the area. Our geographical isolation and that of the communities we serve creates a physical barrier to timely initiation of healthcare. We have our CTC/CTU up and running as of today. We are lightly stocked but can handle the first wave. Immediate resupply will be needed thereafter. Thus far our life saving treatments have taken place in the patients' homes as they were too weak to walk to our facility. We need personnel to man the fort here so we can go mobile and reach our patients before it is too late. If anyone has access to a dirt bike, rhino or 4 wheeler that would help immensely. We are in the process of obtaining a 4x4 truck thanks to Humanity First, hopefully we will have it within the next few days.

> With regards to the mystery hemorrhagic fever we have seen no cases at the Cloud Forest Medical Clinic. Nor have we encountered any cases in our house calls, recon missions or treks over the mtns. The area described falls into our patient base, if we see any cases I will notify HEAS.

Namaste,
Clayton Bell, MD

Subject: Cholera Update: Sud–Est Mountains

Here is the most recent update on the cholera situation in the mountains of Sud–Est, Haiti:

The initial case of cholera in Baie d'Orange is recovering well after transitioning from IV fluids to ORS. His wife (the second case) has required a large amount of IV fluids to replenish her bodily needs but is expected to transition to ORS later today.

A third case has developed near the home of the first two individuals. A 20 year–old male from Petionville (where he is a student) developed acute diarrhea on 12 Dec after arriving in Baie d'Orange. His family members gave him "a pill" (assumed to be loperamide) that briefly stopped the diarrhea. However, his symptoms soon resumed and, beginning on 15 Dec, he began vomiting a clear liquid. The patient was given doxycycline and IV fluids and is also recovering well. It is expected that he will transition to ORS later today.

This morning, I will head to Mabriole to investigate a potential fourth case of cholera in the community. One of our "point persons" heard reports of an individual with vomiting and diarrhea beginning three days ago. This individual reported a travel history from Port–au–Prince. I will keep everybody informed of what I find.

It would seem that the route of cholera infection, for the time being, is via Port–au–Prince and the Kenschoff Trail. It should be expected that there are numerous additional cases along the route from Kenschoff to Seguin. I would recommend that these regions be surveyed as soon as possible. Unfortunately, the terrain in this area is challenging. Trucks and even motos cannot navigate the trail. The best available methods are by "Rhino," mountain bike, or foot. It will be difficult to get aid to these communities, in some cases even by helicopter. Fatality rates due to infection will most likely be high even if action is taken straight away.

We have spread our network of "point persons" at churches and schools throughout the mountains of the Sud–Est, addressing all of the major areas along the route to Fond JnNoel and Macary. Our network of point persons has been expanded to include voodoo officials and doctors as suggested to us by other organizations currently combating cholera. We have also begun employing aquatab vendors as health agents in community markets throughout the Sud–Est. Our aim is to try to have symptomatic patients referred to the clinic as soon as possible. Since our first case was detected on 13 Dec, we have had three patients referred with symptoms suggestive of cholera. Only one of these patients has been actually suspected of infection. We expect a high rate of referrals for non–cholera–related diarrheal illness in the future.

As our preventative efforts spread, we remain in need of additional ORS. If you can help to meet this need, please contact us at cloudforestmed @gmail.com. All questions regarding the current situation in the Seguin Plateau and surrounding mountains should be directed to that email address as well.

Thank you all for your support so far as we continue to manage the cholera situation.

In kindness,

Kyle Denison Martin

Hi Clayton,

Thanks for your note. I have spent the day working on our ground ops report for the areas north of the mountains… the situation is simply this: cholera is spreading from the northern flood plains south into the mountains, and from the coastal communities in the south to the north into the mountains. We are observing bad outcomes as cholera reaches the rural mountain communities because it takes too long for them to come down while ill– they die en route and are buried along the road.

Either way, evidence points to a very bad outcome for the mountain communities in Sud Est due to isolation and extremely difficult access. We now have evidence of cholera reaching the initial front range communities in the north, and now we have your report to the south– analogous to a "pincher grip". Speaking of difficult access, we lost 2/4 4WD vehicles in our convoy on the way to Belle Fountaine, for instance. One of the vehicles was able to turn around, the other blew the clutch in Belle Fountaine… it is still there. Rain and fog in the mountains blocks helo support…

We are able to redeploy our recon team again to Seguin. I understand you met (?) Lincoln. He did not have time to survey other communities in the area, so we'll return and do a rapid recon of points south of your location.

Cheers,
Jim

On Dec 13, 2010, at 9:35 PM, Clayton Bell wrote:

Today we had our first confirmed cholera case in the Seguin/Baie d' Orange area. The epidemic has been slowly creeping our way for several weeks and we knew it was only a matter of time. Our Cloud Forest Medical Clinic is strategically positioned deep in the remote mountains of Haiti and we along with the local Gov Depository (whom we are partnering with) have the only medical facilities between the Fermate Mission Hospital all the way south to Peredo and the Caribbean Sea. We are located in Seguin, Sud–Est along the popular trade route where several cholera cases have recently been reported (today's case is the first to be confirmed by medical personnel). At this point we are ramping up our prevention and education efforts through daily cholera prevention classes to all our patients, speaking about water purification, hygiene and sanitation to all the local schools & churches, mobilizing our community health workers and empowering community leaders as additional cholera point of contacts. Right now we have a few boxes of ORS along some LR, IV tubing and Abx (Azithro & Doxy), but are in no way prepared for an outbreak of any significance. At this point we do not need additional medical personnel, but I want our cholera supplies stocked up and medical teams on standby so when shit hits the fan we are ready. Our clinic serves all the surrounding mountain villages (for hrs in every direction) and we have the best chance to prevent a large scale outbreak in this region. Please support us by notifying potential medical teams and bringing in a UNHAS chopper full of supplies. We have plenty of landing zones nearby. Latitude & Longitude coordinates are:

Lat: 18.314764
Long: 72.227273
Alt: 5,355 ft

Supplies we are in greatest need of include (# of *s indicates level of need):

***Lactated Ringer's soln
**ORS
***IV caths (22, 20, 24, 18 & 16 gauge)
**IV/PO Promethazine (Phenergran) & Ordansetron
*IV tape (clear sticky variety, not cloth tape)
*Hep Locks & Hep Flushes
**Vomit/Diarrhea buckets
*Bleach, Mops & Disinfectant sprays for cleaning
*Tarps (to lay across the church floor when we convert it into a cholera hospital)
*Cots (for makeshift hospital beds)
*gauze pads
*Aquatabs for prophylactic distribution

Please email us at cloudforestmed @gmail.com or call me directly at 3898–3233 if you have any questions.

Namaste,

12/13/10 email from Dr. Jim Wilson to Lionel St. Pierre:

"Lionel,
We had a guy go down there yesterday, and he interviewed the doc in Seguin who said there was no cholera. He did not survey other communities, but I plan to return to the area and do a more comprehensive assessment.
Jim"

Cholera Update from Seguin
by Cloud Forest (Seguin) Medical Clinic on Thursday, October 28, 2010 at 5:05am

I've received several emails from people asking about whether the current cholera outbreak in Haiti had spread into Seguin and how they could help the staff at the Cloud Forest (Seguin) Medical Clinic prepare should cases begin to appear.

At this point in time, it appears that the Seguin community is at relatively low risk of being affected by the outbreak. Most of the current cases have been located in the Central Plateau region of Haiti near the Artibonite River floodplain. While several cases of cholera have been detected in Port–au–Prince, each of the infected individuals reported recent travel in the Central Plateau. Domestic and international health organizations fear that in recent weeks cholera may spread into the many "tent cities" in Port–au–Prince unless massive public health measures are taken. Several organizations have stepped up efforts to distribute water purification systems and provide education on hand washing. Other organizations have deemed the spread of cholera into Port–au–Prince an inevitability and are stocking up on ORS (oral rehydration salts), IV fluids, and antibiotics.

Seguin is blessed with a natural barrier against the spread of infection from Port–au–Prince. Located about 5,600 ft. in the mountains south–east of the capital, Seguin is buffered to a certain degree. There is a trail through the mountains leading from Seguin to Port–au–Prince that is commonly used by vendors to sell their goods. As a result, there remains a chance that one of these vendors could bring cholera into Seguin. However, this chance is relatively low and would depend on a number of factors falling perfectly into place. Furthermore, Seguin's primary water sources are (1) rain water and (2) natural spring water. It is unlikely that either of these water sources could be contaminated in a way that would affect the entire community.

Despite the low likelihood of cholera spreading into Seguin, a number of efforts have been taken to assure that the community is protected. Free water purification tablets (Aquatabs) have been distributed through two of the local churches. These tablets have also been distributed each day at the Cloud Forest (Seguin) Medical Clinic. Each day at the clinic has begun with a short lesson on proper hygiene and sanitation. This weekend, I will purchase several hundred bars of soap to distribute throughout the area. On Tuesday, our Community Health Workers had a special lesson on cholera prevention and sanitation. After this lesson, they were sent out to educate their neighbors and further distribute water purification tablets.

Should cholera arrive in Seguin, the pharmacy is stocked with adequate ORS for about 1,000 patients and IV fluids for 200 more. Our supply of antibiotics is extensive. We are awaiting CDC reports on the antibiotic sensitivity of the cholera bacteria to determine how to best treat potential patients.

In the case of a cholera outbreak, we have several health care workers ready to travel to the clinic and help with management efforts. Nonetheless, we remain hopefully that the assistance of these individuals will not be needed.

Please keep Haiti in your thoughts and prayers as the outbreak continues to spread. It will likely be several months before fears begin to die down and years before the threat of cholera is eliminated from the country.

Do not hesitate to contact me if you have any questions about the outbreak and what we doing in Seguin.

This site is a CTC per list from Health Cluster/PAHO dated 11/19/10:

CTC DEFINITION: Center for the treatment of Cholera (CLC): a center set up for the treatment of cholera with a staff recruited for this 40 to 300 beds which receives the sick suspects of cholera. In the case ideal, there are tents for rehydration iv and tents or rooms for the phase of re–convalescensce. Capable of processing of complications such as pulmonary edema. Open 24 on 24/ 7 on 7. Receives the sick who come spontaneously and cases referred to it.

CHOLERA BED CAPACITY: 27 per PAHO list dated 12/6/10

Confirmed open by Caroline Seguin MSF France

As publically stated by MSF 11/12/10

"Responding to cases in the north
As of now, MSF teams have treated more than 6,400 patients suffering from acute diarrhea nationwide, including a large proportion suffering from severe dehydration, symptoms typical of cholera.

MSF is supporting two Haitian Ministry of Health hospitals in the Artibonite Region, where the cholera outbreak originated. Medical teams are working in the main hospitals in St. Marc and Petite Riviere. Relevant medical supplies, such as intravenous fluids, catheters, and oral rehydration solution, as well as chlorine for disinfection, are also being provided. But it is outside more populated areas such as these where assistance is especially needed.

To bolster health clinics in some of the more outlying areas in the north and center of the country – in places such as Gros Morne – MSF is supplying IV solution, oral rehydration salts, IV sets, and hygiene materials. Supplies have also been provided to the hospital in the town of Port de Paix in the country's far north. MSF is preparing cholera treatment centers in Gonaives and Bassin Bleu".

12/12/10 HEAS Update From Dr. Jim Wilson:

Big Paul (MMRC), Open Hands, and our team formed a convoy to go into the valley prepared for the worst but uncertain about precisely what we would find. In these verification deployments, the mantra is "you don't know if you don't go", and this was certainly the case. We headed to the "Belle Fountaine" that was mentioned by multiple sources in the Furcy area as a village experiencing "8–10 fatalities".

There has been some degree of controversy in regards to what constitutes a 'team' for such deployments and what should one bring along in case you find a community in trouble. In the case of yesterday's deployment, we took 4 4WD vehicles in, 1 was unable to continue, and the other blew its clutch as we arrived in the camp after 4.5 hrs offroading to get there. Going back in to retrieve the vehicle and survey the area some more by foot. When we had initially gone, we debated how many medical personnel and RL to bring given the uncertainty of the reporting balanced with the moral and ethical considerations of arriving without an ability to help if there is a bad situation. A terribly difficult decision.

We elected to go with an interim option, where we brought supplies and enough medical personnel to handle a situation for 24 hrs until help arrives. In this case, MSF graciously offered backup support. Comms were decent, but sketchy as we went deeper into the mountains. We had cell and radio contact at certain key points in the itinerary. No helo LZs were identified in immediate proximity to Belle Fountaine along the route we took, which was the approach from Croix des Bouquets, through Jong, and points south.

Along the way, we passed through Tisource asking for directions. Our security detail got the phone number of the town administrator / leader who called us after we were already up the mountain to say they had "300 fatalities". We saw no evidence of this during our very brief stop but will circle back there this morning to check it out ourselves this morning. If true, there are multiple communities that wash, bathe, and drink from the same irrigation runoff ditch that passes through multiple communities.

Upon arrival to the crest of the mountain ridge, we had locals acknowledging the presence of cholera pointing down to Tisource and later found locals saying they themselves saw a single fatality and then pointing to Belle Fountaine. Many hours later upon arrival in the town of Belle Fountaine, we found no evidence of cholera but there was a local claiming two fatalities in a village one hour's hike from Belle Fountaine. We don't know if locals were referring to the town of Belle Fountaine or the entire region is considered "Belle Fountaine". If the latter is true, then we have a most difficult survey to conduct and implications of dire consequences for these villages if they ever become infected with cholera. This is a VERY isolated and difficult to access region.

We scratch our heads about these events because we observed multiple independent sources reporting an outbreak in "Belle Fountaine". Perhaps they are referring to Tisource. Either way, we return to the area today for an overnight mission to continue the evaluation process.

Thanks for the backup support Carmen as always and special thanks to Big Paul and his crew, the folks from Open Hands, and Dutch–MSF for their assistance.

Re: Results From Kenscoff and Mountain Villages South Survey

Dear Jim,

I am waiting for the assesment of this mission and ready to support if needed. Paul contacted me last night but too late and we need first verifiaction of the alert in order to support.

Please keep me posted on situation ASAP

Best,

Carmen

On 11 December 2010 06:52, James Wilson wrote:

Thank you for the kind offer.

We are moving quickly now to intercept and evaluate reporting we discovered in the Obleon – Furcy corridor by multiple locals of roughly ten fatalities each in the communities of Bel Fountaine and Mohotiere Brouette. Infection believed to have been acquired after travel to the Sequin area as opposed to PaP, however we will investigate this further. Brief stop at the Baptist Mission located between Kenscoff and Fermante indicates they've seen 8 patients total, none from these communities, no fatalities with two discharges. No patient surge noted, and the staff had not heard about the abovementioned communities.

We have teamed up with MMRC Global's Paul Sebring and the good folks from Open Hands to get on–site quickly. It is a long off–road drive with possible on–foot hiking into these areas. We have been told by locals there is zero medical support. If true, we expect to see a very bad situation, and one for which we may not be prepared with our recon team. With the multiple days of

lockdown we've all experienced thanks to the demonstrations, we believe the disruption in NGO activity has contributed to a bad situation. We hope we are wrong.

I am copying PAHO ARO for their awareness of the possibility we may need immediate assistance for rapid mobilization of a CTC/CTU capability. We estimate we will be able to last 24–48 hrs on–site without support, however there is a great deal of uncertainly what we will truly find. All helo's are grounded last time we checked, so again we hope the situation is not as bad as what the locals claim.

Cheers,
Jim

Last update 12/3/10
200 pts / 2 died in last 24 hr
CHHN no longer tracking due to MSF support

12/8/2010 Email from Carwyn Hill
Reports need for more ORS, buckets, chlorine and educational hand outs.

11/25/10 Email from Carwyn Hill
We are now officially a CTC. Have about 50 patients today but expecting more tomorrow and getting ready in the next two – three days to have 200+ capacity. Working on it with MSF, Konbit and our national staff.

11/23/10 Email (excerpts)from Konbit Sante posted on Cap Network Yahoo group
Haiti Hospital Appeal and Konbit Sante are working with MSF to open up 200-250 more beds now for cholera victims at the Baptist Convention Hospital within the next week. That number can expand as needed. The Baptist Convention Hospital in Quatier Morin is making available a couple of existing not-yet-open buildings to be used in the next few days while MSF sets up tents on their campus

From Cap Haitien Network Team Member – Hannah 11/14/10
The Hospital of the Baptist Convention is not yet set up as a CTC and is currently only treating patients for immediate rehydration before sending them to Justinien. They are not at present equipt to deal with further intervention, although there are plans in the pipeline.

Email from Carwyn at Hospital: 11/11/10
We have 8 patients today

Our Hospital and Clinic facilities are providing urgently needed care to those most effected by the earthquake. You can donate to the emergency appeal and read about our relief efforts on the news, blog and earthquake pages. We continue to run the Ambulance service and House of Blessings. We are in the process of sourcing Medical supplies to send to Haiti for more information please contact us.

BLOG: http://www.haitihospitalappeal.org/blog.html

HHA HEALTH CENTRE

In 2007 we opened our first Health Centre which provides urgently needed primary health care to many people, a food distribution and vaccination programme, health education and a 4x4 Ambulance service. Find out more about the exciting ways you could help us reach more people through our health work...

HHA HOSPITAL PROJECT:

We're building a new Hospital about 25 minutes from Cap-Haitian, Haiti's second largest city. It currently only has one Government run hospital which has to try and serve over 800,000 people. Find out how we're trying to help, and what you can do to get involved...

HOUSE OF BLESSINGS:

In partnership with Jubilee Action and thanks to their generous support, together we were able to open a new home/respite centre for children with physical and mental specials needs or those affected by HIV/AIDs this year. Find out how you could get involved in supporting these vulnerable children...

VOLUNTEERING (FROM THE SITE):

If you're looking to find a short two week trip somewhere, or perhaps some form of Gap year, the Haiti Hospital Appeal has a whole load of opportunities for you! As a small charity our trips provide a unique and personal experience, very much based upon the specific individual needs, skills and desires of those individuals who come to Haiti with us. We're keen to hear from you if you've got a passion for justice, and a heart to bring change in Haiti. It doesn't matter whether you're 18 or 65, we'd love to hear from you to discuss in more depth what you could do. Please contact: ieuan @haitihospitalappeal.org

MEDICAL TEAMS:

Each year foreign medical teams provide a major support to our work, offering some of Haiti's most isolated communities urgently needed mobile clinics and the like. Teams can see anywhere from 50 - 400 people in such clinics. They don't only provide a valuable support to the communities we help, but are also a huge encouragement to our medical teams on the ground. If you're a

medical professional or student and would like to use your skills to help the people of Haiti in some way then please contact us today to find out more.

KIDS TEAMS:

If you've got a heart for working with children then our Children's Home for special needs children and kids with HIV/AID's is always in need of help. We look after some of the most vulnerable and at risk children in Haiti, and working with them is a life changing experience. Whether you want to just come and play, or offer more specific skills like Physiotherapy please contact us. We also run sports clubs through the year for local kids and teenagers, and various other activities when we have volunteers available.

BUILDING TEAMS:

If you're an experienced builder, plumber of electrician and could offer your skills to help build our new Hospital, or work on improving our Health Centre of Children's Home we'd love to hear from you. Equally, if you don't feel you're that great at DIY but are willing to learn, get your hands dirty and have a laugh then don't be put off. There's enough jobs for everyone.

If you feel you could support our work in other ways please still get in touch! We'd be more than happy to discuss ideas!

CDI Cayes–Jacmel Update from Patrice Tallyrand with Foundation Mayabou:

12/14/10: Update from Patrice – Caritas was only able to supply Clorox – All other supplies very urgently needed"

Latex gloves, Medium, 7/8: 5 cases of 100
ORS, 9000 doses
Doxicycline, 7000 tablets of 100 mg
Tetracyclyne, 7000 tablets of 250 mg
Paracetamol (Also known as Acetiminophen)– 7000 tablets of 500mg
Aquatabs 7000 tablets
Ringer's Lactate 2500
Cholera Educational Posters for community distribution

12/10/10 EMAIL UPDATE FROM PATRICE TALLYRAND:

Re: Update – CDI – Cayes Jacmel
Friday, December 10, 2010 5:33 PM
From: "Patrice Talleyrand"
To: leslie @citizenactionteam.org
Cc: "M.D.Jim Wilson"

Hi Leslie,

I have not spoken to Jim Wilson yet.

The cubans did not receive the PIH supplies yet but Dr Deslouches promised today again they would be delivered soon including 10 cholera cots. He did not say when but we are getting there.

Yesterday, the cubans and the canadian red cross visited the land in Cayes and in is not usable because of it's proximity to the river. They visited another location that can be used and cityhall is negotiating with the owner. We do not have an answer yet. The population is also causing troubles but this will also be taken care one way or another.

Today we visited Marigot where a piece of land is being setup by the population urgency comity. Electricity has been installed and this afternoon water pipes were being put in place. The cubans as well as miss Andrenèse Juste from the health center in Marigot said that it was suitable.

Justin also went to visit a land in Peredo with the marigot commity and the cubans. They said it can be used.

I know that the cubans can staff the CTCs but I do not know if they can supply it. For supplies, we are counting on all the help we can get.

For the moment, Caritas said they have the funds to purchase some supplies for Cayes Jacmel and Marigot. They will send for supplies in the DR.
PIH also promised supplies as well as MSF.

Miss germaine from the red cross sent us 5 agents to proceed to disinfection of patients houses in Cayes jacmel. This went well. She will send agents to Guillemonde to do disinfections as well.

Well I think this should give you a good idea of the situation here.

Will keep you posted

Best regards
Patrice

HEAS MEDICAL FACILITY CHOLERA QUESTIONNAIRE RESPONSE 12/6/10:

Facility NAME: CDI Cayes–Jacmel

Hi,

I am Ilaria, Emergency Medical Coordinator MSF Belgium.

Out team working in Grand Anse went yesterday to visit the CTC in Chambellan.
The clinic had half of the bed occupied. The doctors didn't refer to our team about any shortages, apart from Chlore which has been donated.

Have a good evening

Ilaria

I just got off the phone with Mayor Vidal of Chambellan. He does not speak english, so I threw a translator on real quick to get some details: Since Nov. 14th they have seen over 3,000 cases– with 40 fatalities. The clinic has 25 cholera beds and they have Haitian and Cuban doctors (I was unable to get an actual number). They were last given aide by MSF, 12 days ago, and are almost out of all supplies.

Requested that Lionel St. Pierre phone the site POC on 12/28/10 to get a specific supply needs list with quantities included.

L Tel – 12/27/10

Community Based Survey: Centre d'hebergement off Beudet 61 suffers water shortages, food shortages, and various public health issues.

Location
North of Carrefour Beudet and Route Lillavois
Date
Mar 31 2010

Incident Report Description
Statistics on the IDP Camp:
Population: 902 Families quantity: 150 Children Quantity: 405 Babies quantity: 26 Pregnant women quantity: 8
Affected Houses: 100 Destroyed Houses: 10

Immediate Needs and Concerns:
1–Water shortage: drinking water is contaminated, causing vaginal infections
2–Infectious disease(sore eyes, vaginal infections, diarrhea, vomit, fever
3–Mental health: people are having difficulty communicating and are otherwise behaving oddly –– "acting a fool" in response to questions.
3–food shortages

Infrastructure:
Their is need for proper piping infrastructure for the population to water their gardens. The water pump needs to be fixed.
They think they should find a way to use solar energy to make the pump work, since fuel is expensive.

Survey administered by Quartier par Quartier.

This site is listed as a 'UTC' on the MSPP/PAHO/Health Cluster list dated 11/13/10

UTC DEFINITION: Unit for the/Cholera (UTC): a health center, mobile clinic or hospital alone which has built a space to be able treat patients cholera, or in a tent or ente or in a house of the structure. THE UTC is able to make oral rehydration and intravenous use. Capacity 2–20 beds. Opening: at least during 12 hours. Staff : doctor, nurses, agent sanitation, health worker.

11/12/10 MSF article includes Choscal Hospital reference as a CTC in Cite Soleil: http://www.doctorswithoutborders.org/news/article.cfm?id=4850&cat=field–news

EXCERPT: "As is the case in other MSF health facilities, rising numbers of patients have been admitted to Choscal Hospital, a Haitian Ministry of Public Health hospital in Cité Soleil, due to acute watery diarrhea and vomiting—both of which are symptoms of cholera infection. The MSF–supported hospital has received hundreds of cases over the past five days. “Yesterday we recorded 216 separate cases of cholera arriving at the hospital, while the total number recorded just 5 days ago was 30,” said Stefano Zannini, MSF head of mission in Haiti, on Thursday. “Patients are coming from everywhere, throughout the city, slums and wealthier areas.”

Choscal Hospital in Cité Soleil: MSF intervened in this Ministry of Health hospital initially focusing on earthquake–related trauma. Currently two operating theaters are functioning for major surgery, and one for minor surgery. MSF also works in the emergency room and the maternity and pediatric wards. Medical and psychological care is also provided to victims of sexual violence. The hospital has a 100–bed capacity, all occupied and all under tents (the building has been repaired but patients are still too afraid to stay indoors). Rehabilitation works are ongoing to reduce the risks of flooding. The team has rearranged the facility into a general hospital, providing drugs to all the services and serving a population living in extremely precarious conditions. Psychological care continues for all patients and caretakers.

100 bed tent hospital
2 OR's
Has average of 2–3 violence related injuries per day.

Haiti: MSF Treats More Than 1,000 Patients; Inflatable Hospital on the Way
January 14, 2010

Doctors Without Borders/Médecins Sans Frontières (MSF) medical teams in Port–au–Prince are treating large numbers of people who suffered fractures, head injuries and other major trauma during and after the January 12 earthquake.

More than 1,000 patients have received care in the four tented facilities MSF set up near the damaged buildings in which it had been working. The primary concern at the moment is the overwhelming numbers of people who need immediate treatment and major surgery. An MSF team is beginning to work in the operating theater of a major public hospital in the capital’s Cite Soleil district, while other MSF staff are trying to identify additional medical structures that remain intact.

An inflatable MSF field hospital, equipped with two operating theatres, is expected to arrive by air in the next 24 hours. Crucial personnel, including surgeons and anesthetists, and supplementary stocks of medical supplies are on the way as well.

Food, water and shelter materials are all in short supply, however. "Basic provisions were always problematic for people in Port–au–Prince but the position is far worse now," said Vincent Hoedt, one of MSF's emergency coordinators. "And obviously there's a concern for people who are already weakened by injuries. There are also shortages of things like gasoline, which affects the working of all kinds of vital equipment."

MSF has seven charter flights stocked with staff and supplies ready to travel to Port–au–Prince, but thus far, only one has been able to fly into Haiti. That flight carried 25 tons of relief material—tents, medical disaster kits, blankets, plastic sheeting, jerrycans, and hygiene and cooking sets—from an MSF facility in Panama.

While MSF is sending up to 80 additional staff members to reinforce the ongoing efforts to provide emergency care for those who need it, the organization remains concerned about our staff in Port–au–Prince. As of yet, the teams on the ground have not been able to confirm the whereabouts of all their Haitian staff.

January 13, 2010
Doctors Without Borders/Médecins Sans Frontières (MSF) teams already working on medical projects Haiti have treated hundreds of people injured in the quake and have been setting up clinics in tents to replace their own damaged medical facilities. Paul McPhun, MSF’s operations manager for Haiti, described the current situation for MSF teams on the ground during a press conference on January 13.

Update on Wharf Jeremie:

Ok, it appears life giving force got a water system placed in the neighborhood with support to sister Marcella. The team from global dirt did their last shift last night, and did some additional training with the nurses to make sure they could handle more intensive cases of cholera. They will be keeping in touch with the sister. I understand that MSF and others are supporting the clinic with supplies, so unless otherwise notified, lets consider the clinic under control. Not sure who is the initial contact with sister marcella, but I would like to get her involved with our medical distribution program and offer her the opportunity to request medical supplies for the clinic. Not sure if she has access to internet...will set up a meeting with her when things slow down a bit here.

Subject: Re: Need

We had a busy night no emergencies but keeping people stable. A noticeable increase in children. We inherited 30-5 patients upon arrival. Acquired 10 more in the Night. And the morning rush gave us 20 with about half in need of evaluation and the other needing immediate iv serum.

We ran out of beds or only ever had one open at time.

Supplies:

Iv or oral doxcy or ciprofloxacin
Massive bucket / aka 10 thousand gallon tank – metal would be ideal because could burn in it. All of their containers are full!

Think that's all for now. We have a great relationship going with the nuns. They seriously want us to stay forever. I would forever recommend working with them.

Leah + DIRT

Date: November 18, 2010 8:27:03 AM EST
To: brenda – grassrootsunited
Subject: Good morning

Brenda,

We had a slower night with around 40 patients. We had our first infant that was critical and dealt with many of the same kids that we treated the day before coming back in a declined state. We are evaluating how we can do better education with discharge to make sure thy are still drinking.

MSF came back with three nurses this morning. An Italian doctor is covering the afternoon and we are taking the night shift.

Supplies:

Butterflies
Heavy duty trash bags
Cleaning gloves for waste disposal workers
24 Gage iv catheters yellow

11/16/10:

PLEASE DO NOT BE CONFUSED BY COMMUNICATIONS INDICATING THAT THIS SITE HAS ALL THE SUPPLIES THEY NEED – MOST DELIVERED ARE SHORT TERM & THEY ARE STILL VERY OVERWHELMED AND NEED LONGER TERM SOLUTIONS & A REGULAR FLOW OF INCOMING SUPPLIES/VOLUNTEERS & SUPPORT. THIS SITE IS VERY IMPORTANT TO THIS COMMUNITY AS SISTER IN CHARGE HAS A STRONG ELEMENT OF TRUST DEVELOPED SO THAT THOSE THAT ARE WARY OF TREATMENT WILL COME IN.

UPDATE FROM GRASSROOTS UNITED (PORTIONS PARAPHRASED):

Sending a team out to recon today and establish security for clinic and have 4 to work night shift – assuming they can feel "reasonably" safe.

As per supplies, we have a bit more in stock but not enough to support the clinic for any length of time.

IF MSG IS SUPPORTING THE CLINIC PLEASE HAVE THEM DO A SUPPLY DROP.

I can confidently say they need:

LR solution
22 Gage and smaller iv caths
Tubing
ORS
Chux
Buckets
Bleach
Mops
Gloves– especially size large xl

Additional concern is biohazard mangement. We sent surgical grade cleanser yesterday, but worried about general waste management and handling of fatalities.

Of course, our ultimate goal is to save lives, however, we have a responsibility to the teams to provide as much safety and security as possible – concerned that if they are not well supplied and run out of meds overnight that the situation could turn....

Brenda Zimmerman – GrassRoots United

11/15/10 10:17 AM PDT:

Wharf Jeremie is receiving/has received cholera medical supplies, generator, solar lights, water & support from GrassRoots United, PADF, St Damien Hospital, JP HRO, team from Canada & more. Remaining need is being coordinated off–list.

J/P HRO is also donating a generator.

AMY KING

11/14/10 HEAS POST FROM AMY KING/JEFF KERZNER:

"Just spoke with Sister Marciella.....the Wharf Jeremie clinic has received about 80 new cases today 30 of them serious. Totally overwhelmed with no support from the local mayor (who has no resources or expertise to deal with this, though the Ministry of Public Health has said it's his responsibility), Sister said Medecins san Frontiers left the clinic yesterday at 1 PM. I'm looking into getting them a few pallets of ringer solution and a bunch
of solar powered lights." –Jeff Kerzner PADF

"I'm here now in the near dark waiting for a generator and supplies. Now waiting for Fr Rick. A few are very close to death." –Lisa McFadin

Brenda/GrassRoots United, please message me off–list at rolak...@hotmail.com so we can coordinate supply exchange!

THANK YOU ALL!
AMY

11/14/10 Facebook message from Amy King:

I just spoke with Lisa & connected her to Fr/Dr Rick Frechette.

1) the critical kids & adults are being CURRENTLY loaded into tap–tap & are being driven TO Fr/DR Rick at St Damien Children's Hospital in Tabarre....he has a large UNICEF tent ...set up & will begin treatment immediately

2) Lisa is getting supplies FROM Fr/Dr Rick to take back to Sister at Wharf Jeremie for the non–critical pts

3) Life Giving Force is on site to address water needs!

11/14/10 Facebook message from Lisa McFadin:

Just in from Lisa.... "Life Giving Force on the ground now at Wharf Jeremie and we are brainstorming how we can get the filtration system in place asap. We need funding to bring down additional systems. Right now, we need a generator, pumps, diesel to meet this immediate need."

11/14/10 Facebook message from Lisa McFadin/Amy King:

Cite Soleil hospital is sending pts to this clinic & it is in distress!
There is only "1 American doctor"
Many children are sick, the little one in this photo "is dying" has "worms in vomit"

NEED: water, IVs for children, gloves, GENERATOR (have NO lights)
BOTH Lisa & Sister are ON–SITE now – call to confirm needs

I have already just forwarded this to GrassRoots United, MMRC, MTI, IMC, MOSCTHA, GlobalDIRT, Operation Blessing, CAN–DO, Open Hands, HERnow, Samaritan's Purse, MSF, JP HRO, CAMEJO, General Hospital, St Damien

I will keep you all posted! & all of you please do likewise until this need is met!

AMY
rolaking@hotmail.com

From Lisa McFadin – J/P HRO Volunteer on the ground 11/11/10:

"Quote from the ground about Cholera situation "I heard from Wharf Jeremie that there are now so many cases that they can't receive them all, and there are dead bodies now in the streets".

We need help in Cite Soleil.

Education, Prevention and Clean Water. The CTC is very short staffed, need help ASAP."

11/11/10 LTel: Lisa is working on getting contacts and supply needs list – should have by 11/12/10

NCA wash has done training of trainers in building latrines and has together with MOFECS finished 30 latrines this week. The total finished is 60 latrines in Place Fierté, 32 in Parc Sportif and 30 in Rue Germain. The planned latrine building in Site Soleil is not finished. It now plans to build showers in the three camps. Hygiene training of 100 children has been carried out in Place Fierté with focus on the use of latrines.

11/10/10: MSF treating increasing number of suspected cholera cases in Port–au–Prince, Haiti

EXCERPT: "At all of MSF's own four facilities in Port–au–Prince, teams have treated an increasing number of suspected cases since Saturday, November 6. These facilities have more than 300 beds already set aside for treatment in cholera treatment centers (CTCs). MSF is currently constructing an additional 320–bed CTC in the Sarthe neighborhood, where the organization already maintains a post–operative care facility".

SOURCE: http://www.doctorswithoutborders.org/news/article.cfm?id=4474&cat=field–news

MSF Activities as of May 2010:

Sarthe: In February, MSF opened a new post–operative center in a converted soft drink factory in the Sarthe area of Port–au–Prince, with a potential capacity of up to 300 beds. 160 patients are receiving post–operative care – wound care, more specialized orthopedic or reconstructive surgery – in this structure. Handicap International physiotherapists are working in collaboration with MSF to optimize rehabilitation and patient adaptation to prosthetics. Mental health care is also provided. In addition, there are also 100 external consultations per week for post–operative care.

RE: fatalities reported in Fond Baptiste
Wednesday, January 26, 2011
From: "MSF OCA HoM"
To: haiti–epidemic–advisory–system@googlegroups.com

Hi everyone,

Please take note that we have already spoken to MSPP officials who have investigated these suspicious deaths and they have confirmed that it was caused by methanol poisoning. Unfortunately, some young children are among the 20 reported deceased.

Just wanted to advise you as we had also been following this situation closely.

Thanks for the monitoring efforts!

Sylvain Groulx

Ok, and just got a note from another HEAS partner saying "12 cases confirmed to be methanol by MSPP"... wow, that was one of the FASTEST alert / verification / response cycles I think I've ever seen!
Nice work HEAS!
Jim

We just received this from the Samaritan's Purse team:

SP just did an assessment in Luly near Archaie. 4 people had died with sudden onset of blindness. We interviewed all of the family members. All victims were male adults with known alcohol problems, they all consumed homemade brews. No fever, all with vomiting, spinal and head myalgia.

Preliminary assessment is consistent with methanol.

Just to avoid chasing the same thing and duplicating valuable resources...

Samaritan's Purse works closely with the Cabaret community and Cazale and will send a team including the MSPP doctor from Cabaret to Arcahaie and Fond Baptiste to investigate this problem and report to the HEAS community. If you have further info or are already pursuing this to a definitive end please let us know as a community ASAP and offline for further discussion.

Re: 12 fatalities reported in Fond Baptiste
Wednesday, January 26, 2011 10:28 AM
From: "Jim Wilson, MD"
To: "Haiti Epidemic Advisory System" <haiti–epidemic–advisory–system@googlegroups.com>

I am in Cazale, which is up the mountain from Cabaret. The judge from Cazale just came by to discuss these rumors. He said that the people in Fond Baptiste are reporting eye pain, headache, neck pain, then blindness, and also feeling like their bones are breaking and feeling weak. They're not reporting paralysis specifically (per what he's heard). They are not reporting any vomiting or diarrhea. He stated that at least one of the patients from Fond Baptiste was transported to the hospital in Archaiae (not sure which one) where she died. I'm not sure about any other patients (where they died).

He is rightfully worried about what the response will be in the community, both in Cazale and elsewhere. People are tired, they are scared. Cholera presented as an unknown illness that could kill within hours, and now they potentially have a new unknown illness to worry about. Per the rumors the judge is hearing, these patients are sick for about 2 days before they die.

The judge in Cazale was asking specifically about how the corpses should be handled. We advised handling them the same way they have handled people who've died from cholera.

Jen Halverson, M.D.
(currently working with Real Hope for Haiti in Cazale)

I should probably note that Caberet is unhappy with Parliament elections and
there have been protests and rumored road blocks, thus getting between
Archaie and Port–au–Prince on Rt 1 is well, not easy.

I don't know what secondary road options are available going to Fond Baptist
from PauP...

There's no medical care up there. They see our docs twice a year and our community health agents frequently but they have no other support in that regard. Not good at all.

12/27/10: Update from CHHN
Linking up with HHA, OXFAM, Action Sanitaire and MSPP employing health promotion and sanitizing campaign.
Needs Chlorox, soap, aquatabs and training materials

11/24/10 Email from Nate with Konbit Sante
MSF is looking to put a CTU annex to the Fort St. Michel Health Center, but there is a lot of community opposition at this point… Hopefully will be dealt with in the next couple of days.

Posted on HEAS 11/10/10

There have been a number of deaths in the community around FSM (Fort st michel), and I understand people don't want to stay at the gymnasium.

In 2003, Konbit Sante expanded its work to the clinic at Fort St. Michel. This well–organized public clinic is under equipped and under staffed to serve the needs of this impoverished neighborhood of 40,000 people on the edge of Cap–Haitien. There is no electrical service or safe drinking water in Fort St. Michel. Most homes are very fragile dwellings constructed on refuse and vulnerable to flooding. Tuberculosis is the leading infectious cause of death in the Fort St. Michel neighborhood.

140 Cholera beds extendable to 280 per PAHO list dated 12/6/10

As publicly stated by MSF
[http://www.doctorswithoutborders.org/news/article.cfm?id=4849&cat=voice–from–the–field]

Since a cholera epidemic was first confirmed in October in Haiti's Artibonite region, Médecins Sans Frontières teams have treated more than 10,000 suspected cases nationwide. In addition to MSF's 3,000 staff members in Haiti, more than 100 international staff and more than 400 national staff are working on cholera intervention activities. MSF is supporting two Haitian Ministry of Health hospitals in the Artibonite Region, where the cholera outbreak originated.

To bolster health clinics in some of the more outlying areas in the north and center of the country—in places such as Gros Morne—MSF is supplying IV solution, oral rehydration salts, IV sets, and hygiene materials. Supplies have also been provided to the hospital in the town of Port de Paix in the country's far north and another MSF team is working as far north as Cap Haitien to treat suspected cases there. MSF is supporting cholera treatment centers in Gonaives and Gros Morne. A 20–bed cholera treatment center has also been set up in Leogane, where MSF already runs a hospital.

The epidemic has taken grip in Port–au–Prince, and while MSF teams are scaling up capacity to 1,000–beds in locations throughout the city, the numbers of cases is already overwhelming MSF and public medical facilities.

Stefano Zannini is the Head of Mission for MSF in Haiti. Here he gives a first–person account of the situation on the ground for MSF teams responding to the spread of the outbreak in Port–au–Prince.

It's a really worrying situation for us at the moment. All of the hospitals in Port–au–Prince are overflowing with patients and we're seeing seven times the total amount of cases we had three days ago.

In the slum of Cite Soleil, located in the north of the city, yesterday we recorded 216 separate cases of cholera arriving at the hospital, while the total number recorded just 5 days ago was 30. Patients are coming from everywhere, throughout the city, slums and wealthier areas. At the moment we have 400 beds set aside for the stabilization and rehabilitation of patients and we're hoping to get that up to 1,000 by the end of the week.

But we are really worried about space. If the number of cases continues to increase at the same rate, then we're going to have to adopt some drastic measures to be able to treat people. We're going to have to use public spaces and even streets. I can easily see this

situation deteriorating to the point where patients are lying in the street, waiting for treatment. At the moment, we just don't have that many options.

We're looking for alternative spaces, but you have to remember what the situation in Port–au–Prince is like. Since the earthquake, every available space that wasn't damaged has been filled by camps where people are living in extremely precarious conditions. Just to find an empty area in this city is a major logistical challenge, so for us to find room to treat people is very complicated.

At the moment we have more than 100 international staff and more than 400 Haitian staff working in the cholera treatment centers throughout the country, but it's just not enough. More medical staff are arriving, but there's a chronic lack of personnel here in Haiti and we are close to being overwhelmed. Our teams are working 24 hours a day and tiredness is becoming an issue. Our teams are already stretched and are very stressed from the workload. Working inside a cholera treatment centre with the smell, the noise and the pressure of so many patients is not easy. But we will keep on providing treatment.

As the MSF head of mission, I am extremely proud of the passion and commitment my teams are currently showing in Port–au–Prince and in Haiti. But we're at critical point. There is no cholera in living memory in Haiti and thus little knowledge of the disease. This means there are a lot of misconceptions and rumors flying around which has caused panic in the population. Some people are staying away from the cholera treatment centers or are afraid to have them in their neighborhoods because they think they help spread the disease. We've been trying to explain that the opposite is true: the closer a centre is to a population, the better.

We're trying to explain that cholera can kill, but at the same time, it's a disease that you can treat quite easily. It's extremely important that the patient arrives as soon as possible to the medical facility in order to be treated.

Cholera treatment centers, where patients can be isolated, are critical for effective treatment. The access points are controlled so that whoever enters or leaves is sprayed with chlorine to disinfect properly and prevent further spread of infection. Depending on the number of beds, each treatment center can take up from 50 meters to one hectare of space. Each patient is given a bed and usually does not stay for longer than two days.

But another problem is that when people have finished their treatment and they leave the centers, they go back to what is potentially a cholera infected area. Here in Port–au–Prince, 1.4 million people are still living in camps and within the camps, hygiene, sanitation and clean water are scarce. These 1.4 million people depend entirely on humanitarian aid groups for clean water. Infrastructure is weak and it's very difficult to get medical aid and water to all of these people.

Two weeks ago I was in Petite Riviere in the Artibonite region where the cholera outbreak originated, and I visited our hospital and cholera treatment centre in Cite Soleil this morning. People are brought to our facilities, many crying and some screaming. Panic has spread throughout the city because cholera is completely new to these people. One of the saddest moments that sticks in my mind is a 10– or 12–year–old child who I saw bringing her mother to our cholera treatment centre and sitting with her, waiting for her to be treated. Usually, it's mothers and fathers who bring their children to hospital, but here it is the kids who help their parents to the treatment centers.

Cholera beds: 100 extendable to 200 per PAHO list dated 12/6/10

Health Cluster – Cholera Outbreak Response – Organizations and Activities\
(LIST MAINTAINED BY PAHO. LAST UPDATED: NOVEMBER 13, 2010 2:50PM)
CTC Defintion:

Centre for the treatment of Cholera (CTC): a center set up for the treatment of cholera with a staff recruited for this 40 to 300 beds which receives the sick suspects of cholera. In the case ideal, there are tents for rehydration iv and tents or rooms for the phase of re–convalescensce. Capable of processing of complications such as pulmonary edema. Open 24 on 24/ 7 on 7. Receives the sick who come spontaneously and cases referred to it.

MANAGING ORG: MSF France

Affiliated with Global Health Ministry

News!
For the first time in our 41–year history, Alma Mater has added a pediatrician as well as a full–time gynecologist to our current staff of 3 new graduate physicians, one general physician who coordinates the HIV/AIDS program, and one surgeon. We are also proud of our new cervical cancer detection program which began May 31st!

Sister Jackie Picard
Born in Rhode Island, Sister Jackie's order is the Religious of Jesus and Mary (RJM) and she is a nurse. Before moving to Haiti in September 1997, Sister Jackie did extensive work in elderly nursing homes and was the director of a temporary medical shelter for homeless people with AIDS. Now living at Kay Se (Sisters' House) in Gros Morne, she helps coordinate the many missionaries that come to the Gros Morne area, often serving as an interpreter for them as well. She also is in charge of the formation for incoming Haitian candidates for RJM and is a member of the Board of Director for the local hospital, Alma Mater. She also facilitates getting local patients to and from Port–au–Prince for specialty medical services not available in Gros Morne.

Sister Clarice Carroll, M.S.N. 1967 (NURS), retired as an associate professor of obstetrics/gynecology at the University of Mississippi Medical Center in December 2009. In May she began work as a nurse–midwife practitioner at the Alma Mater Hospital in Gros–Morne, Haiti.

http://www.medicineforpeace.org/haiti.htm

There is a regional hospital in Gros–Morne (the Alma Mater Hospital), that consists of five small, single–story, cinder block buildings with open windows and tin roofs. The local Catholic Church operates the hospital as well as a clinic (dispensaire) in each of the eight districts. Two part–time physicians and a small number of poorly trained community health aides attend to the 127,000 inhabitants of greater Gros–Morne.

Wednesday, October 26, 2011 7:37 AMMessage body

Dear Ted and HEAS,

In case this news is not circulating, we received word yesterday from the Haut Limbe Ebenezer Health Center (Seminaire Limbe), near Robillard, that Ebenezer's CTU has increased from 25 cholera patients in–house last week to 60 interned patients and are also feeling the strain of increasing demand for cholera relief.

(We are currently in North Carolina and not due back to Haiti until end of June.)

Steve

Nancy B. James RN
Stephen W. James MD
Holistic Health Ministries in Haiti & the Caribbean
ABC International Ministries/CBF Global Missions

2/4/11 Email from Dr. Steve James
MSF has now consolidated the Limbe district and have established their own CTC on the southern outskirts of the town of Limbe to which all health centers are to refer cholera patients.

2/4/11: HEAS post from Dr. Steve James
FYI, this 10th case of suspected ascending paralysis occurred at the Ebenezer Community Health Center CTU, Haut Limbe, Dept. du Nord, GPS19.6988N/72.3567W, an MSPP/MSN facility. Dr. Emmanuel Mareus is the Medical Director. Since onset of the cholera epidemic in this community, this small community–run CTU has admitted 1844 cholera patients with severe dehydration, overall mortality 2.6% with 246 total cholera patients treated January 2011. As of today,the CTU currently has 3 patients interned for rescue IV perfusion.

Steve James

12/11/10 CHHN Notes
Last update was 11/25/10
560 pts. total/ 40 in last 24hr
20 total deaths
CHHN no longer tracking due to MSF supporting in supplies and staff

This site is designated as a CTC per PAHO list dated 12–6–10

This site is not listed as an 'official CTC' on the MSPP/PAHO/Health Cluster list but we are using this CTC item in the avails because the operations taking place on site meet the official criteria of a 'CTC'. (Changed to CTU – Lpar 12/11/10)

11/27/10 HEAS Post from Dr. Steve James
FYI, I do not see the Haut Limbe Eben–Ezer Health Center (Département du Nord) on the maps. This is an MSPP/MSN UTC that has been hospitalizing severe cholera patients since 11–2–10 (as of noon today 11–27–10, 701 total severe gastroenteritis cases have been hospitalized, over 2000 suspected cholera cases not hospitalized treated with ORS and cholera treatment and prevention education without availability of chlorine tablets, and 20 hospitalized deaths).

HEAS POST:

Re: health worker infections
Friday, November 26, 2010 8:22 AM
From: "Steve & Nancy James" <snjames8 @ yahoo.com>
Add sender to Contacts
To: haiti–epidemic–advisory–system@googlegroups.com

The Ebenezer Health Center Haut Limbe treated this week a Haitian nurse who works at a clinic outside of Port Margot who required IV rehydration for severe gastroenteritis with severe dehydration. That clinic has been referring suspected cholera cases to the Port Margot CTC. This is the only case I know of so far.

Steve James MD
Nancy B. James RN
Stephen W. James MD

Email from Steve James: 11/17/10
Ebenezer Health Center of Haut Limbe, an MSPP clinic, now relatively small CTC, has hospitalized close to 300 patients, treating around 50 at a time, and is averaging about 300 liters IV Ringers/24 hours. Roads remaining closed, the CTC will most likely be out of IV fluids in the next 24 hours.

Steve James MD

Source from:
http://www.baptiststandard.com/index.php?option=com_content&task=view&id=11798&Itemid=53

...
Steve James worked Oct. 22 in the Ebenezer Community Health Center in Haut Limbé on a day when no cholera cases were diagnosed. Nancy prepared and helped distribute educational materials to providers and educators in the local communities.

They are working with Joel Dorsainville, coordinator of disaster relief services for the Haitian Baptist Convention, who is updating and coordinating efforts within the churches of Haiti. Next they plan to help two community health centers set up cholera treatment protocols and centers.

On Oct. 24 the couple participated in a conference on a method of solar water disinfection called SODIS –– a simple procedure where contaminated water is filled in a transparent bottle and exposed to the sun for six hours. During that time UV radiation from the sun kills diarrhea–generating pathogens like cholera. The program has been operating in Haiti since January through the work of Medical Ambassadors of Haiti, a community health ministry and ministry partner to the Jameses.

Also on Sunday, ministry funds from the Cooperative Baptist Fellowship and the American Baptist Churches were given to help purchase and transport medical supplies procured by Christian partners in the Dominican Republic. The funds will also help set up treatment centers to care for the very sickest, as well as to contain the spread of infection through health education, prevention and primary health care to partner community health centers.

The Jameses said they have been in communication with CBF field personnel nurse Jenny Jenkins in the south in Grand Goave. To date she had reported one cholera case hospitalized in Grand Goave after the person arrived from the north.

If large numbers of cholera cases develop in the north, the couple said, there is concern there will be a shortage of intravenous fluids, oral rehydration salts and antibiotics. The World Health Organization and international communities are working to address possible shortages.

Patrice Tallyrand is coordinating with HEAS Cholera Response in getting supply support for CDI Jacmel and working with the Cubans, the Canadian Red Cross, MSF and Caritas to procure Cholera Supplies and a site to set up a CTC. Currently, CDI Cayes–Jacmel Hospital is only set up to treat with oral hydration and sending critical patients to Jacmel Hospital supported by MSF (which is now currently turning people away due to max capacity). MSF sent a large load of Cholera supplies but the local authorities have not released it to Cayes–Jacmel Hospital.

Organizations able to assist should contact Patrice directly at:

marcel.leopold.patrice@ gmail.com
+509 3648–8040

Help efforts in the USA contact
Claudine Sada +1 305 607 0969 in Miami

Christian Heurtelou, 4545 St Kevin App 11, montreal QC, H3T 1J1

All Donations should go by Boat directly to Jacmel or by plane through Jacmel Airport.

All AID to be distributed immediately with the help of Minustah and Office of Civil protection.

••••••

Your donations will be used to coordinate our logistic efforts to channel aid from point a to point b. As it is difficult to get aid here by road, and the airport is controlled by international instances, the best way to help is through financial aid.

Goods can come in, and when they do, we need help to get it to different points around the city. For example we are receiving saturday 25000 liters of drinkable water and need to rent trucks and pay for transportation to refugee camps.

This is where your contributions make it happen. For instance, thanks to your help, we were able to bring much needed supplies to the hospital St Michel. We captured the images that keep you posted on the situation thank you.

After a couple of days of clearing rubble and counting the dead, the people from Jacmel are facing a whole new set of difficulties. Water resources are dwindling, so is food. Prices are already rising on the little bit that is left. For example, we've heard that water bags were selling for 5 gourdes instead of one. Rice is already five times as much. Gas prices are also on the rise. A gallon of gas is now worth 500 gourdes.

Back to base, we uploaded our pictures, video, and sound. We've been contacted by many people asking what they can do to help and how, so here's an idea of different ways you can help with what is happening, and an overview of the aid situation.

Most of Haiti's banks are destroyed, so it is difficult to gather funds for the moment, but we've heard that some agencies like cam or western union would be open by Monday. We will be monitoring them and providing an update as soon as possible.

This is the current situation, but there are a lot of things you can do to help. Financial help is better in a sense that even medical supplies have trouble getting through. Security is also an issue. Therefore, it is more efficient to send money. Here's how.

One could send money through Paypal. Click the Paypal button on this page for a link to the account.

We will keep you posted on the transfer situation. We are currently monitoring the available agencies in the area and will inform as soon as one opens. Here is the information for the transfer:

Name : Patrice Talleyrand
Président, Fondation le Mabouya
NIF (id number) : 003-209-851-0
Phone number : 3648-8040
Address: 14 Rue Salomon, Cayes Jacmel, Haiti

The Banking system is down. That's why we cannot use the foundation's account. A donation will be made in your name to the foundation which will deliver a receipt.

As far as goods are concerned, It very difficult to get anything to Haiti.

The best way seems to be through the Dominican Republic. We are currently trying to set up a maritime route through the Dominican Republic in accordance with Jacmel's mayor. We should meet with him shortly.

The roads are being worked on, so soon, it is dangerous to travel to jacmel by road. Keep in mind though, the structure is severely damaged in several places, even though the road would be open, crossing in some cases can be very dangerous. We would advise against it

Seguin and Thiotte, which were alternate roads, are in bad shape. It's impossible to get through jacmel with a car.

The sea is our only hope, along with the money transfer system.

40 Cholera bed capacity

This site is designated as a 'CTU' per 12/6/10 PAHO List

CTU DEFINITION: Unit for the/Cholera (UTC): a health center, mobile clinic or hospital alone which has built a space to be able treat patients cholera, or in a tent or ente or in a house of the structure. THE UTC is able to make oral rehydration and intravenous use. Capacity 2-20 beds. Opening: at least during 12 hours. Staff : doctor, nurses, agent sanitation, health worker.

NOTE: There was no SITE POC listed on the PAHO list.

12/8/10 HEAS Post from Karen with CCH
Jacmel in Saint Michel Hospital has 120 cases, 20 new in the last 2 days, multiple deaths. The hospital/CTC with MSF only has 40 beds for cholera treatment and is being swamped with patients, so we have been asked to expand the CCH/ IMC ORU to a UTC with at least 25 beds and provide American medical staff to assist/train Haitian staff.
1) Supplies are needed for the UTC
2) US medical professionals are needed.

2/5/11 CHHN Louissaint Maxime
I went to Labadee today just to check with the clinic and the water purification system.

Firstly I spoke with Meme Rosette, one of the two nurses working at the clinic.
She said to me there's one cuban Doctor there currently but she'll be leaving on 25 or 27 of February. She also said volunteers are more than welcome to assist the Labadee clinic, because the clinic's always full of people particularly now because they used to have two or three Cubans at a time.

With regards to the water purification system, I went to see the old building they used to use for communal access to treated water. It hasn't worked for over three years, the equipment is old and damaged. The system that was in place treated the water through uv rays, but the glass has been smashed.

Vwa Aiyti distributed water filters last year to the three schools and some of the most needy families in Labadee.

I didn't see the mayor of the village because his not in haiti right now.

Subject: Les Cayes CTU

To: leslie@ citizenactionteam.org, "Judy Foster"
Date: Saturday, December 4, 2010, 7:07 PM

Dear Leslie,

Les Cayes has a CTU at the general hospital. It has 25 beds. Today they had about 35 people according to IOM, (however this may be before the 22 arrived from Cavaillon). The CTU is operated by International Medical Corps. Dr. Jojo was here until today. The program is directed by Chandra Gilmore – cgilmore @ internationalmedicalcorps.org . Space is very limited and the organization is assessing alternate sites. MSF Holland visited to assess the situation but to my understanding will put a treatment unit or center in another town. However there apparently has been much resistance from the community towards this. Les Cayes also does not yet have a waste disposal location or a burial site (the cemetery in town floods).

MEDICAL SUPPLY NEEDS LIST FROM HIC (by way of Cosy Joseph direct from hosp.) 12/3/10:

1000 – Ringers Lactate – 1000
500 – Intracath Pour Les Moins De 5 Ans / Intracath for children under 5 years old

10 – Paravent / Folding Screen
20Baril Ou Drum Pour Les Dejection Des Patients / Barrels or Containers for Patients' excrement/vomiting and contaminated fluids
30 – Pour Accompagnateur Par Malade / Chairs or folding stools for patient's accompanying adult – 30

RE: Haiti – Cholera Epidemic : Les Cayes, dramatic situation
Friday, December 3, 2010 6:16 AM
From: "Cosy C. Joseph"
To: haiti–epidemic–advisory–system@googlegroups.com

For personnel, GCF (www.gaskov.org) has not yet decided to deploy any team under the leadership of the organization. We do not have the financial means to sustain rotating teams on the ground at this point. So far, we have opted to deploy our volunteers with JP/HRO and Konbit for Haiti is helping defray some volunteer costs. At the beginning of this crisis, we decided to spend our resources on providing a potable water distribution center in Roche–a–Bateau and to share whatever supplies we raise. So our available financial resources are allotted to that project not on leading medical teams on the ground. We thought it would be more effective to supplement another organization by sending them the volunteers that we've recruited so far. Les Cayes is GCF's home base. If the situation is really as bad as TDH reports in Les Cayes, I am willing to change our approach and send our volunteers to them instead of JP/HRO .

For supplies, HIC in Les Cayes needs supplies. See their needs list in French/English. We provided HIC with some gloves and syringes that we had in Haiti. I do have some supplies that I am expecting here next week, but they were already promised to other organizations before I received this list. Anything you can do to help would be most certainly appreciated.

Re: Hôpital Immaculée Conception/École National des Infirmiére – Les Cayes Questions
Wednesday, December 1, 2010 9:46 AM
From: "Cosy C. Joseph"
To: "leslie@citizenactionteam.org"
Cc: "Amy King", "Laura Katz–Parentau", "M.D.Jim Wilson"

I've been leading Mobile clinic teams in Les Cayes since 2000. Currently I am deploying my volunteers to JP/HRO. If the situation deteriorates in Les Cayes, I will divert our resources to Les Cayes and would welcome joining forces with HEAS.

Regards,

Cosy C. Joseph

On Dec 1, 2010, at 10:26 AM, Leslie Teltoe – Citizen Action Team Relief Database <leslie@citizenactionteam.org> wrote:

Hello Cosy,

I am entering the information based on your comments and the article into the CAT dbase as well as our new Google Spreadsheet Watchgroup which documents all the sites we are giving attention to. I have a few questions if you don't mind that you might be able to provide clarity on.

I scanned the article carefully, and find no direct information on the Hopital Immaculee Conception. Can you verify if that site is the one that is referenced being run by MSF & TDH?

> HIC is operated by MSPP – with some support from the Cubans and recently MSF for the Cholera crisis. At some point TDH did have a unit at HIC for malnourished children.

–Did the MSPP director indicate any truth to MSF withdrawing?

>We did not discuss that. But TDH is an excellent and reputable ONG that has been doing a lot of great work in Les Cayes. I think their call for help should be seriously considered.

–Is the report yesterday from Paul Rudenberg on the HEAS correct in stating that the Les Cayes General Hospital is in fact an officially designated "CTC"?

> What's stated in the article is true. According to the MSPP director, HIC is the officially designated CTU. They are working on establishing a CTC. So far they have not found a property large enough to host the CTC.

–Can you tell me if Les Cayes General Hospital & Hopital Imaculee Conception are run by MSPP?

> Yes! General Hospital and Hopital Immaculee Conception (HIC) are the same institution. Yes it is operated by MSPP

–Are MSPP's resources solid enough to respond, or are they officially reaching out to equipped NGO's to fill gaps? If so, is there any word on response by a particular organization to respond immediately?

> Needs to research this one. Karen Carr's team held some training there two weeks ago. I can talk to her to get her teams feedback on the resources that were trained.

HEAS POST 11–30–10:

There is a Cholera treatment center at General Hospital in Les Cayes
that is seeing some suspected cases (apparently 27 on Nov 29).

Paul Rudenberg
Les Cayes

HEAS POST 11–8–10:

Suspect death in Cayes
Monday, November 8, 2010 7:50 PM
From: Mustard Seed Missions

Jim, I just posted about a case at the General Hospital in Cayes, but
the man I'm texting with in Haiti said there's also been a death
there. The fatality was from Grande Riviere.

POST ON HEAS:

On Nov 8, 2010, at 8:12 AM, David Doherty wrote:

Family of four from Gran Riviere (near St. Louis du Sud) had been
transported to HIC in Les Cayes. They were sent based on clinical
presentation but the lab has sent samples to the National Lab in
Port–au–Prince for confirmation.

This case was handled well by MSPP. The family was first referred to
Le Charite in Les Cayes which immediately notified the departmental
director, Dr. Louissaint. He had the patients transferred to the
departmental hospital which has been doing the work up.
According to my people on the ground in the South, the family had not
traveled to any of area previously affected by the cholera outbreak.

This is the TDH (Terre Des Hommes) 11/28/10 press release translated regarding HIC & the Les Cayes Cholera situation:

Progression of cholera in the department South and the city of Les Cayes call for the urgent mobilization

The situation on the front of the epidemic of Cholera in the department of the South and in particular in the town of Cayes is extremely worrying. The health services are totally obsolete while the number of cases is constantly increasing and that no major medical humanitarian agency is not present in the area. The fourth city of country does not have today treatment center at the measurement of the humanitarian crisis which is increasing.

The agglomeration of Les Cayes account a global population of more than 320'000 inhabitants. The city is significantly from the size of Cap Haitien. Urban areas are densely populated areas, the populations the poorest live in the vicinity of river mouths, without any sanitation system. With its channels of evacuation open skies and the major part of the city center located flood area to, Les Cayes presents high risk of contamination (see map DINEPA).

The number of persons contaminated in the department of the South, even if it remains in absolute terms well below the number of cases recorded in Port au Prince or in the Department of Nord, is constantly increasing. Until now, in the whole of the department, 12 outbreaks of contamination , including 5 located in the city, have been identified. Official figures state of 160 cases treated, but they are largely under–evaluated.

The health authorities have been made destitute face the outbreak program and already sorely lacking the means, human and material, to face a situation which is constantly to worsen.

Located in the enclosure of the hospital, the CTU transitional has a capacity of only 25 beds. Women, men and children do not have spaces separated. Managed by staff insufficiently trained and overloaded, missing of supervision, it saves 10 15 admissions daily since a few days. It is completely saturated. The inmates of the central prison are also referred to it.

All indicators show that the epidemic will explode in the city of Cayes. It is already beginning to strike the surrounding agglomerations. There is an urgent need for mobilization of actors medical and WASH in order to build in the shortest possible time CLC to a minimum of 100 beds, dimensioned to the needs of a city of 140 000 inhabitants and thus to avoid that the situation in South is out of control. The MINISTRY lack of means and penalty to mobilize its staff.

3 Dec 2010 – Cholera in Haiti: Tdh mobilizes against the epidemic

Launched on Monday 29th November, the mobilization appeal of Terre des hommes against cholera has not remained unanswered. Three specialists from the Swiss Humanitarian Aid Unit (attached to the SDC) are a hand to our team against the epidemic since early December, together with the doctor already lent to Tdh by the University Hospitals of Geneva. Two other experts are expected to join soon.

In Les Cayes (South) the third city of Haiti, MSF Holland will assure the medical component of the Cholera Treatment Centre (CTC). Soon, the equipment needed to treat 2'000 sick people, requested to the SDC, will land on the island by cargo aircraft.

Michel Roulet, a pediatrician who has experienced several outbreaks in humanitarian contexts, said: "I had some concerns last month on the capacity to meet the new health crisis. I note today that Tdh teams react with skill and intelligence to care for the sick and to prevent communities. The CTC of Grand Goave, which includes a hundred beds, is remarkably conducted with the support of other NGOs."

Tdh collaborates with Medecins du Monde, Medecins sans Frontieres and with the Haitian Ministry of Health and Population to curb the epidemic.

The World Health Organization has revised its forecast: cholera would reach up to 400'000 people by next April with a peak expected in late December. Among those people, one in twenty could die.

From partners in the north....

I made a visit to both Limbe hospitals yesterday and brought more supplies to Bord de Mer Limbe clinic (Haiti Village Health) where I ended up staying night due to huge volumes of rain and assisting with cholera patients here. Even with the rain (likely causing many to never make it) clinic is seeing 5-10 patients a day. 6 to the hospital this morning one of whom died. Late last night we were at (Hospital) Bon Samaritan which is overflowing with patients. We talked with Shawn (Hodges) who said the last two days had been crazy and they were hoping to set up a second tent today to accommodate increased patient load.

The situation at the other limbe hospital (Government hospital St Jean) was worse. We brought a patient there only to discover that a huge tent and building full of patients was being attended by noone. There was no doctor or nurse present, dry IV bags, and when we asked how a doctor could be reached noone really knew. All patients from the clinic are now being routed to Bon Samaritan after stabilization with IV or oral fluid and the hospital has said to send them along no problem.

1/3/11 CHHN Update
Although fully supported by MSF, they do not always have all the supplies they need and could use external support. Also a possibility that MSF will pull out soon and HBS feel thee is still a great need.

12/11/10 CHHN Notes:
Last update: 11/22/10
49 current pts.
CHHN no longer tracking due to MSF support

11/22/10 Email from Paul Hodges (stateside)
HBS (Hopital Bon Samaritain) received its first patient of Acute Dysentery Infection on the 21st of October 2010. In the days following HBS began to receive more patients with the same symptoms all of them coming from the upper areas of 8th and 4th Section of the Limbe Valley. HBS contacted MSPP and based on the reports of a similar cases in the Artibonite Valley, HBS doctors believed that they were looking at an onset of epidemic in the North of Haiti. MSPP and CDC have determined this epidemic to be Cholera. Due to the nature of the illness and that the majority of patients were coming were coming from the poorest levels of society, HBS decided that, as with our TB and the Diabetic programs, that its cholera program would also be entirely free for admission and medicine. With the help of MSPP, AmeriCares , MSF, PAHO and others for supplies and staff, HBS has seen and treated almost 400 patients from all over the Limbe Valley to where the epidemic has now spread. The mortality rate of about 6.25% is due, in part, to the slow response of the families to bring the patients in at the first sign of symptoms. HBS has in isolation on any given day between 40 and 80 patients.
HBS badly needs help such as volunteer doctors and nurses. Help is also needed to better isolate and provide proper hygiene for the patients. The doctors, nurses and staff at HBS are performing a heroic effort but are stretched thin trying to maintain the hospital while caring for the cholera patients. HBS has supplies on hand to treat the patients, though the supply routes are sometimes slow depending on the situation in the country.

11/11/10 HEAS POST 7:03 PM:

"The hospitals in the Limbe river region, and most other treatment
facilities in the same region are being inundated with cases, starting
with Hospital Bon Samaritan in Limbe."

FROM HEAS POST:
On Nov 10, 2010, at 1:56 PM, Tiffany Keenan wrote:

From partners in the north....

I made a visit to both Limbe hospitals yesterday and brought more supplies to Bord de Mer Limbe clinic (Haiti Village Health) where I ended up staying night due to huge volumes of rain and assisting with cholera patients here. Even with the rain (likely causing many to never make it) clinic is seeing 5–10 patients a day. 6 to the hospital this morning one of whom died. Late last night we were at (Hospital) Bon Samaritan which is overflowing with patients. We talked with Shawn (Hodges) who said the last two days had been crazy and they were hoping to set up a second tent today to accommodate increased patient load.

The situation at the other limbe hospital (Government hospital St Jean) was worse. We brought a patient there only to discover that a huge tent and building full of patients was being attended by noone. There was no doctor or nurse present, dry IV bags, and when we asked how a doctor could be reached noone really knew. All patients from the clinic are now being routed to Bon Samaritan after stabilization with IV or oral fluid and the hospital has said to send them along no problem.

Personal contact....
also had another report from Clinic Ebenezer who said they were overrun with patients and on their last box of saline. Staff have been overwhelmed and they are looking for nurses.

CRISIS IN HAITI
EARTHQUAKE 2010

Update 24 January 2010

Friends of HBS

GOOD NEWS!! The surgery team, headed up by Dr. Anthony Brown and Dr. Anders Ulland of MN arrived at HBS late Wednesday bringing supplies, medicines and hope to the victims of the Earthquake. Working with the HBS medical staff, the team members immediately set up for surgery and performed an emergency C–Section that night. Since then the team at HBS has been able to accomplish wound debridement, a below knee amputation, open reduction and internal fixations of fractures, non operative treatment of fractures (cast/splint) some with use of anesthesia and emergency C–sections. Surgery is ongoing as more patients receive word that we have trauma/orthopedic/general surgeons working and are showing up to receive help.

Thanks to all of you for your prayers, donations and support to make this possible. We are continuing to receive surgery and medical supplies here in Florida to airlift to Haiti. Our goal is to keep HBS surgery operational for as long as needed with the best

care possible. Your continued donations will make this happen as we have to rotate medical personnel and airlift more medicines and supplies.

Friends of HBS

Shortly before 5 PM, January 12, 2010 a major earthquake struck the capital of Haiti, Port au Prince and surrounding area causing major devastation. Seventy miles north, in Limbe, at Hopital Bon Samaritain, the buildings shook and a violent rolling motion was experienced for close to a minute. About ten minutes later, an aftershock, though less powerful, repeated itself. The light poles and trees swayed back and forth. Though the earthquakes were the hardest we have ever felt, we are thankful that the hospital buildings which were well built by Dr. William Hodges, sustained little or no damage. Aftershocks are continuing, contributing to a general panic throughout Haiti. All the staff, patients and kids are well. The hospital remains open caring for all.

PLEASE CONTINUE TO HELP support our efforts at HBS Limbe. Every donation, however small helps. We need operating capital in Haiti. We need supplies on the ground. So far we have been operating with cash only as the banks are barely functional. We need funds to help defray fuel costs to airlift supplies to Haiti. We hope to be able to send in larger aircraft with badly needed medical and surgery supplies at the end of the week from Ft. Lauderdale. Once treated, victims need to be reintegrated into these communities outside Port au Prince.

VOLUNTEERING (FROM THE SITE):

HBS encourages persons from different countries and from all age groups and walks of life to come and donate a portion of their life, use their skills and experience the joy of sharing with another culture and society. HBS needs medical professionals such as general doctors, surgeons, anesthesiologists, PA's, physical therapists, nurses, midwives, lab technicians, and pharmacists on a regular basis. General support staff, such as administrative personnel, computer technicians, and maintenance personnel is also sought. Whether you are a student, a professional or retired, and you feel that you would like to join the HBS staff in helping to make a difference in the life of the Haitians in the Limbe Valley, please do not hesitate to contact us. We will make every effort to get back to you as soon as possible and let you know available openings and positions that you might be able to fill. HBS asks that you provide your time and air travel to Haiti. HBS in return provides room and board and necessary local transportation for the length of your stay there.

Volunteer Information

HBS is very flexible when it comes to the volunteer work program. We are open round the clock, with most persons working a 40–48 hour week. Although everyone is expected to take responsibility for their work, no one is expected to do more than they are qualified or feel comfortable doing. As every ex–patriate represents HBS in some way, all persons are expected to conduct themselves in a courteous, respectable and professional manner at work and at all other times.

ACCOMODATIONS

Room and Board is provided by HBS for all visiting and foreign staff. Rooms are very basic with food served three times a day in a cafeteria. Running water and electricity (120V/60 Hz) is provided 24 hours a day. Laundry Service, bedding, towels, soap and toilet paper are available.

CLOTHES

HBS expects appropriate attire for work. Hospital blouses and scrubs are available. As this is the tropical weather, good footwear and rain gear is a must. Most clothes are acceptable for free time.

COMMUNICATIONS

Communications are fairly unreliable though there is a satellite phone available for emergency voice and data. E–mail and VoIP are available at local cyber cafes in Caqp Haitian.
HEALTH PRECAUTIONS

Health Insurance is suggested especially for medivac purposes
Updated Tetanus Vaccine
Typhoid – Not required but one should consider it
Malaria – Because of Falciparum malaria in the area, you may want to start anti–malaria pills two weeks before coming to Haiti. Chloroquine pills are available here in our pharmacy.

LANGUAGE

Though French is the official language, Creole (patois) is spoken everywhere. Persons who speak and understand English can be found almost anywhere to translate.

ENTRY REQUIREMENTS

Haiti requires a valid passport. A tourist Card, valid for three months (renewable) is issued upon entry.

FINANCES

The official currency is the gourde. The exchange rate is about 39 gourdes = 1.00 U$. Foreign Cash and traveler checks can be changed locally.

AIR TRAVEL

HBS uses a humanitarian based airline, MFI, that flies directly to Cap Haitian from Florida. If you wish to utilize this route please contact us for more information. Lynx Air is a small commercial based service flying from Ft. Lauderdale to Cap Haitian. One can also plan to arrive through Port au Prince and then fly the shuttle to Cap Haitian.

1. Missionary Flights International (MFI), 3170 Airmans Dr., Ft Pierce, FL 34946. They fly from Ft. Pierce to Cap Haïtian on Tuesdays and on Thursdays. As they are a mission airline using DC–3's for aircraft, they only take passengers recommended to them by the affiliated mission. Their phone number is (772) 462 2395. Once you set up your reservations, please notify us so we can call them to confirm.

2. Lynx Air International, 3402 SW 9th Ave, Ft. Lauderdale, FL 33315.You can contact them for current rates and weight restrictions. They have daily flights into Cap Haïtian using a Metroliner SW–4. Their phone number is (954) 772 9808 or (888)–596–9247.

3. Another option is taking a commercial flight into Port au Prince and then flying the local shuttle to Cap Haitian (U$ 132.00 RT). Caribintair operates 4–5 flights daily.

Update Re: Sud Est Mountainous Region, with specific mention of Michino
Thursday, January 27, 2011 3:00 PM
From: "James Wilson"
To: haiti–epidemic–advisory–system@googlegroups.com

Dear HEAS,

With tremendous thanks to MSF–Holland, MSF–Spain, and PAHO, we have been told MSF has performed several recon missions in these areas and have not found foci with significant case loads. MSF–Spain indicated they are specifically monitoring Michino and intend to deploy there via UN helo.

We have also been informed that MSF–Holland of the following:

"… We are training next week in Kenscoff (non–medical staff from 5 sections around that area; nouvelle pourraine, Bon Gars, Belfontaine, 4e Grand Fonds and Sourcailles) in order to sensitize them about cholera and provide ORS."

Specific thanks to Sylvain, Ellen, and Pablo for your rapid response, as always!

Cheers,
Jim

I have spoken with Patrice.

I was able to locate a good landing zone near Michino. The problem is that the workers going there have no GPS and are not familiar with their use.
Patrice feels it would be best for whomever brings the needed supplies to contact him and the people will meet them in Cayes Jacmel and take them by Rhino.

Please contact me or Patrice off board and we will give you the number to work out times and further details.

Dennis Sherrod

From: "Patrice Talleyrand"
To: "Leslie Teltoe", "Jim Wilson"

There is no specific medical facility in Michino.

A "clinic" was opened with a nurse some time ago by the population. The nurse goes that every week end. So I believe there is a small house.

Coordinates is difficult cause I am not there physically and my guys up there have no clue about GPS.

No I have not checked with MSF, I will call them now to ask if they can help.
I had just contacted Jorge (cubans who can not help because they are in macary now)

Patrice

HEAS Post/Cholera Alert 1/27/11:

Quoting James Wilson:

Thanks Patrice,

I am copying the HEAS in the hopes MSF will see this report. As you and Lionel have pointed out, cholera has penetrated the mountains north of the paved coasted road corridor between Jacmel and Marigot, with devastating outcomes due to lack of medical capacity that existed before the cholera epidemic. A comprehensive recon and assessment of this mountainous region is urgently needed.

Cheers,
Jim

On Jan 27, 2011, at 10:33 AM, Patrice Talleyrand wrote:

Critical Situation in Michino Cayes Jacmel:

• 6 cases this morning
• Population has called for vehicle to come pick up cases
• Access to Michino is very difficult and takes a long time
• MINUSTAH has tried during election but FAILED to identified Helicopter landing area
• Michino is on top of water table
• No disinfection was done

Actions taken:

• We have created a comity through local Grass root orgs and split the area into 3 zones:
• We are providing CLOROX to the 3 zones for disinfection

Needs:

• ORS packages to distribute to the people responsible so Cases do not have to expire while waiting for vehicle from Jacmel.
• It would probably be better if UTC was installed

Fear of riots as tonnes of food lie awaiting distribution

http://www.demotix.com/news/225371/82nd–airborne–lz–food–distribution–center–haiti

1/21/10:

82nd Airborne, distributing food that has 5,000 calories - enough for one day's worth of food/water. Additional images show UN soldiers protecting German and Hungarian rescue teams as they enter Leogane on the 18th January. Petionville Golf Club, Port–au–Prince, Haiti.

The LZ is at the top of a hill. Haitians must wait in long lines and climb up the steep hillside to enter into one entrance, grab one food meal/packet than return down the hill. Most haven't eaten for days, and they have to climb up in brutal heat - it is very punishing on their bodies.

NPR, Jan 19, 2010:

http://www.npr.org/templates/story/story.php?storyId=122734169&ft=1&f=1004

A shipment of food from Catholic Relief Services was distributed Tuesday in Haiti at a makeshift camp in the Petionville Club Golf Course, near Port–au–Prince. Lane Hartill, the group's regional information officer, says the U.S. military's presence is making the distribution effort easlier, but people are still desperate.

Aid Arrives but Few Are Lucky to Get It

By RAY RIVERA
Published: January 18, 2010
PORT–AU–PRINCE, Haiti — When the aid helicopters descend on the Pétionville Club golf course, once a playground for the wealthy and now a sprawling city of makeshift tents, the residents hurry toward them. But to get there, they must climb a steep embankment to a landing zone on top of a hill where the 82nd Airborne Division distributes the food and water.

He arrived in the morning but made it only halfway up the hill, where into the late afternoon he was lying on the ground next to his cane. A woman had given him one of the two bottles of water she had gotten from the Americans, but he said he had gotten no food.

"I cannot make it up," he says.

Even as more aid flows into Haiti nearly a week after a devastating earthquake, the challenges faced by the 82nd Airborne in handing out food and water here illustrate the hurdles in distributing it across the city. Roads are clogged with traffic and rubble. Confusion is rampant. Everywhere, people ask, "Where do I go?"

People lucky enough to have learned about the food drop zone at the top of this golf course in the city's Bourdon neighborhood, where tens of thousands of people now live, still face difficulties getting to it.

The elderly get priority, but some of them cannot make it up. Families with young children also have priority, so some people are said to have borrowed babies and hauled them up the hill.

Others wait near the landing zone for hours in the blazing sun, using cardboard boxes to shield their faces from the stinging dust and dry grass whipped up every time a helicopter lands.

"I guess the people down there have dubbed this 'the hill,' " said Lt. Jeff Wozencraft, 24, of Mannford, Okla. "It's desperate. We're doing everything we can."

Since members of the 82nd Airborne, from Fort Bragg, N.C., began distributing food on Saturday, their delivery method has evolved.

On the first day they wore rifles slung around their backs. By Monday, they had ditched the rifles and were trying to present themselves more as aid workers than as soldiers.

They set up a first aid station because many people coming up had untreated cuts and injuries. They have also ventured into the camp below to find people who can act as community leaders to help organize distribution in the far reaches of the hilly, nine–hole golf course.

And they had to stop serving only at the front of the line, because the whole concept of a line was not working here.

“We found people at the back of the line weren’t getting anywhere and never getting any food,” said Capt. John Hartstock of Vinton, Va. “Now we’re taking 10 at a time from different sections. It’s the best way, we’ve found.”

“It’s been a learning process,” he added.

Another failure: stamping the fingers of people who receive aid to prevent repeat customers who might sell the extra goods and deprive others who need them. People just washed the ink off.

The food supplies are packaged Meals Ready to Eat, similar to the rations the military uses in the field.

The Navy flies them to the landing zone from the aircraft every half–hour or so, dropping off dozens of 21–pound boxes.

They start at 7:30 in the morning and stop at 6:30 as night falls, so people will not be on the dark hillside at night and because the small grass plateau that serves as a landing zone is unsafe for helicopters at night.

Captain Hartstock said they handed out 3,000 meals on Monday and 10,000 bottles of water.

But they estimate there are more than 25,000 people living on the golf course. A look at the rolling hills of tents and blankets and tarps held up by sticks suggests that estimate may be conservative.

Down below, people are grateful for the food, and finding other ways to survive. Impromptu markets have sprung up, but many with limited food at inflated prices.

Once the food is gone, the boxes have second lives as bed mats and roofs. Children use the cardboard to slide down the hills.

Quikni Alakasis, 21, was lucky. She has a 4–month–old baby. She marched up the hill and was called to the front right away. “Because of the baby,” she said. “That’s why they gave me the food.”

Ms. Alakasis lost her home in the earthquake and does not know how long she will live on this golf course. For now, she just waits for the helicopters.

Plush Haitian golf club houses 50,000 refugees
By Andrew Cawthorne, ReutersJanuary 19, 2010

A family relaxes in their new home at the Petionville Club in Port–au–Prince, Haiti, Monday, Jan. 18, 2009. The U.S. Army is distributing food and water at the tent city.Photograph by: Michael Laughlin, Sun Sentinel/MCTPORT–AU–PRINCE – Elite U.S. soldiers lie exhausted on tennis courts and beside a pool. Fifty thousand homeless people cram the nine–hole golf course. Helicopters land every half an hour with crates of water and food aid.

The prestigious Club Petionville, on a hill in spacious grounds overlooking Port–au–Prince and the Caribbean sea beyond, has been transformed into probably the biggest refugee camp in Haiti after last week's catastrophic earthquake.

Haiti is the most impoverished nation in the Western Hemisphere but its elite came to the country club's elegant stone headquarters to dine and mingle with foreign diplomats and businessmen. Now the club houses commanders from the U.S. military's crack 82nd Airborne Division.

Down the lawns and beyond a loose military cordon, the golf course is covered with tents, made from poles and sheets by people who flocked onto the club's grounds after the earthquake brought down its perimeter walls, as well as their homes.

The club, named for former Haitian President Alexandre Petion, largely escaped damage, save a few broken pillars.

"The days are long but it is good to help," said Staff Sergeant Michael Watson, a veteran of the U.S. military's response to the 2005 Hurricane Katrina disaster in New Orleans.

"Katrina was bad but this is a lot bigger."

The 7.0 magnitude earthquake that struck Haiti last week has killed between 100,000 and 200,000 people, according to the government, and left several million on the street.

Unlike chaotic scenes elsewhere, with refugees fighting and scrambling for water and food, an orderly queue winds up the lawns of the club. Each refugee is allowed two bottles of water and one Meal Ready to Eat (MRE) ration.

"If they get unruly, we just sit down," said Captain John Hartsock. "It has only happened twice. They get the message.

"We don't want everyone going nuts, like the scene in 'Black Hawk Down' from Somalia."

FROM IRAQ TO HAITI

Hartsock, who has served three times in Iraq, said it was easier to deliver humanitarian aid in Haiti because there was not the same risk of attack. Instead of the razor–wire common in Iraq, a line of white swimming pool chairs is the only barrier between the soldiers and the refugees.

"We want to avoid the military look," Hartsock said.

The mass of flimsy tents and thousands of people lying on the grass give the appearance of a traditional refugee camp but a closer look reveals differences, perhaps reflecting the better–off social milieu of areas near the club.

Many of the refugees are comfortably trilingual: Creole, French and English. The occupants of two or three tents even had solar panels outside, charging up some mobile phones.

Rony Florial normally teaches tennis at the club. Now he is helping to organize refugee lines, while off–duty soldiers catch some sleep on the tennis courts. Other soldiers await their next shift around the pool, lounging on deckchairs in full uniform, with spectacular views over the city and hills beyond.

"We are all doing what we can to help," Florial said. "The owners have closed the club and allowed the Americans to take over. It is for the national interest."

Since Saturday, U.S. soldiers have attended the refugees from sunrise to sundown at the Petionville Club. On Monday, they gave out an estimated 20,000 bottles of water.

Refugee leaders, however, say many needs are unattended. With the golf course on a high slope, the temperatures have dropped fast at night, and that has killed various children.

"We need blankets, we need toilets, we need help for the children who have lost their parents," organizer Michel Ovilus said. "And we need houses. These people do not want to spend the rest of their life on a golf course."

As publicly stated by MSF 11/12/10:

MSF is supporting two Haitian Ministry of Health hospitals in the Artibonite Region, where the cholera outbreak originated. Medical teams are working in the main hospitals in St. Marc and Petite Riviere. Relevant medical supplies, such as intravenous fluids, catheters, and oral rehydration solution, as well as chlorine for disinfection, are also being provided. But it is outside more populated areas such as these where assistance is especially needed.

To bolster health clinics in some of the more outlying areas in the north and center of the country – in places such as Gros Morne – MSF is supplying IV solution, oral rehydration salts, IV sets, and hygiene materials. Supplies have also been provided to the hospital in the town of Port de Paix in the country's far north. MSF is preparing cholera treatment centers in Gonaives and Bassin Bleu".

This site is designated as a "CTC" per the PAHO list dated 11/19/10

CTC Definition:

Center for the treatment of Cholera (CTC): a center set up for the treatment of cholera with a staff recruited for this 40 to 300 beds which receives the sick suspects of cholera. In the case ideal, there are tents for rehydration iv and tents or rooms for the phase of re-convalescensce. Capable of processing of complications such as pulmonary edema. Open 24 on 24/ 7 on 7. Receives the sick who come spontaneously and cases referred to it.

BED CAPACITY: 120

7/23/11 Posted on HEAS Came from Alex Areces
"The hospital is located in Port de Paix, the are receiving 300 people.
The supplies they need is Lactate ringer, scrub brush, soaps, aprons, cathere, facial mask, gloves, goggles, HTH and cholera beds.
The organizations they have that supporting them is international, WHO, and PAHO.
I have told her about the network team she welcome us to help her in any way we can.
Juline Mauricette"

If the needs cannot be satisfied, please post a request for HEAS members to fill in any gaps.

12/12/10 Lpar Notes:

4/19/11 CHHN update from Hannah
Cholera: 0–5 admissions a month. MSF CTC still in situ but lacking supplies.
Water: well supplies clinic and one supplying the school and fathers' house. Latter has pump but first doesn't. Not purified.

12/22/10 CHHN Update
Staff: no docs, 8 nurses
Receiving supplies from MSF about once every 2 weeks, but not enough. Having to buy own supplies to cover the second week.
Would really appreciate a doctor and support staff but are managing.

2/19/10: CHHN update
2 visiting docs from HVH have left.

12/17/10 CHHN update
CHHN gave aquatabs and general meds on 12/16/10
CHHN gave 20 boxes of LR & other cholera supplies on 12/17/10

12/12/10 CHHN update
Started seeing pts. 10/30/10
34 patients total
6 deaths total
MSPP supllies Nov. 18th, MSF supplies Nov. 25th
Need supplies and volunteers to help with health promotion
Doctors at HVH due to visit 12/14
Accomodations for 2 at Fr's house
Can pick up supplies

12/6/10 Report from CHHN team
34 pts in last 3 weeks
6 death in total, 2 in last 24hr.
Last reciev'd supplies from MSF Nov. 25
Need supplies and personnel– 1 doc who won't stay overnight, nurses are all nuns(3)report that night shift is interfering with their religious practices.
Need help with health promotion– can do in schools and church.

11/25/10 Post to Yahoo Group from Shelia Zielinski
Sister Lucrecia said that in the last 2 weeks the St. Malachy Clinic in Port Margot has seen 61 Cholera patients with 4 deaths. The deaths were related to patients traveling long distances & delays in seeking care. The clinic has been recieving patients from the Boyeou & Novion and they've been staffing 12 beds in the clinic around the clock.

Email from Shelia Zielinski 11/16/10
Fr. Michelin (Port Margot) called tonight & they're in need of more IV flds.

They've had 2 deaths this week from patients that waited too long before coming to the clinic.

FROM HEAS POST 11–11–10:

GHESKIO has not been able to open their Bicentnaire site. MSF Spain reported yesterday they were not fully open either. Someone can just simply call the list of numbers to verify each.

Megan

On Nov 11, 8:41 am, "Jim Wilson, MD":

Dr. Megan Coffee at HUEH/PaP has reported that multiple CTCs are actually CLOSED, not open as recorded. Megan, would you please help us understand the situation from your point of view?

Thanks,
Jim

As publicly stated by MSF – 11/11/10:
[http://www.doctorswithoutborders.org/news/article.cfm?id=4849&cat=voice–from–the–field]

Since a cholera epidemic was first confirmed in October in Haiti's Artibonite region, Médecins Sans Frontières teams have treated more than 10,000 suspected cases nationwide. In addition to MSF's 3,000 staff members in Haiti, more than 100 international staff and more than 400 national staff are working on cholera intervention activities. MSF is supporting two Haitian Ministry of Health hospitals in the Artibonite Region, where the cholera outbreak originated.

To bolster health clinics in some of the more outlying areas in the north and center of the country—in places such as Gros Morne—MSF is supplying IV solution, oral rehydration salts, IV sets, and hygiene materials. Supplies have also been provided to the hospital in the town of Port de Paix in the country's far north and another MSF team is working as far north as Cap Haitien to treat suspected cases there. MSF is supporting cholera treatment centers in Gonaives and Gros Morne. A 20–bed cholera treatment center has also been set up in Leogane, where MSF already runs a hospital.

The epidemic has taken grip in Port–au–Prince, and while MSF teams are scaling up capacity to 1,000–beds in locations throughout the city, the numbers of cases is already overwhelming MSF and public medical facilities.

Stefano Zannini is the Head of Mission for MSF in Haiti. Here he gives a first–person account of the situation on the ground for MSF teams responding to the spread of the outbreak in Port–au–Prince.

It's a really worrying situation for us at the moment. All of the hospitals in Port–au–Prince are overflowing with patients and we're seeing seven times the total amount of cases we had three days ago.

In the slum of Cite Soleil, located in the north of the city, yesterday we recorded 216 separate cases of cholera arriving at the hospital, while the total number recorded just 5 days ago was 30. Patients are coming from everywhere, throughout the city, slums and wealthier areas. At the moment we have 400 beds set aside for the stabilization and rehabilitation of patients and we're hoping to get that up to 1,000 by the end of the week.

But we are really worried about space. If the number of cases continues to increase at the same rate, then we're going to have to adopt some drastic measures to be able to treat people. We're going to have to use public spaces and even streets. I can easily see this situation deteriorating to the point where patients are lying in the street, waiting for treatment. At the moment, we just don't have that many options.

We're looking for alternative spaces, but you have to remember what the situation in Port–au–Prince is like. Since the earthquake, every available space that wasn't damaged has been filled by camps where people are living in extremely precarious conditions. Just to find an empty area in this city is a major logistical challenge, so for us to find room to treat people is very complicated.

At the moment we have more than 100 international staff and more than 400 Haitian staff working in the cholera treatment centers throughout the country, but it's just not enough. More medical staff are arriving, but there's a chronic lack of personnel here in Haiti and we are close to being overwhelmed. Our teams are working 24 hours a day and tiredness is becoming an issue. Our teams are already stretched and are very stressed from the workload. Working inside a cholera treatment centre with the smell, the noise and the pressure of so many patients is not easy. But we will keep on providing treatment.

As the MSF head of mission, I am extremely proud of the passion and commitment my teams are currently showing in Port–au–Prince and in Haiti. But we're at critical point. There is no cholera in living memory in Haiti and thus little knowledge of the disease. This means there are a lot of misconceptions and rumors flying around which has caused panic in the population. Some people are staying away from the cholera treatment centers or are afraid to have them in their neighborhoods because they think they help spread the disease. We've been trying to explain that the opposite is true: the closer a centre is to a population, the better.

We're trying to explain that cholera can kill, but at the same time, it's a disease that you can treat quite easily. It's extremely important that the patient arrives as soon as possible to the medical facility in order to be treated.

Cholera treatment centers, where patients can be isolated, are critical for effective treatment. The access points are controlled so that whoever enters or leaves is sprayed with chlorine to disinfect properly and prevent further spread of infection. Depending on the number of beds, each treatment center can take up from 50 meters to one hectare of space. Each patient is given a bed and usually does not stay for longer than two days.

But another problem is that when people have finished their treatment and they leave the centers, they go back to what is potentially a cholera infected area. Here in Port–au–Prince, 1.4 million people are still living in camps and within the camps, hygiene, sanitation and clean water are scarce. These 1.4 million people depend entirely on humanitarian aid groups for clean water. Infrastructure is weak and it's very difficult to get medical aid and water to all of these people.

Two weeks ago I was in Petite Riviere in the Artibonite region where the cholera outbreak originated, and I visited our hospital and cholera treatment centre in Cite Soleil this morning. People are brought to our facilities, many crying and some screaming. Panic has spread throughout the city because cholera is completely new to these people. One of the saddest moments that sticks in my mind is a 10– or 12–year–old child who I saw bringing her mother to our cholera treatment centre and sitting with her, waiting for her to be treated. Usually, it's mothers and fathers who bring their children to hospital, but here it is the kids who help their parents to the treatment centers.

Protecting Gonaives, Haiti from Future Flooding

Source: CHF International
Date: 01 Nov 2010

When the hurricanes and tropical storms hit Haiti in 2004 and 2008, one of the most affected cities was Gonaives (170 kilometers north of Port–au–Prince). With funding from USAID, CHF International has been implementing projects to help protect the city from future catastrophes. The program focuses on improving drainage and flood control within the city of Gonaives as well as in the surrounding areas. Projects include constructing drains and canals, stone terracing and reforestation to prevent soil erosion, and expanding catchment systems. The program also provides short–term employment for local residents who participate in the construction efforts.

FROM RELIEF WEB:

Innovative CHF Program Recycles Haitian Earthquake Rubble for use in Recovery Effort
Source: CHF International
Date: 28 Oct 2010

October 28, 2010—CHF has launched an innovative new program in Haiti that is turning buildings destroyed by the January 12 earthquake into valuable sand and gravel that is being used in the recovery effort.

CHF's program, called CRUSH (Creating Rubble Recycling Solutions for Haiti), was launched in Petit–Goave on October 18 and is intended to eventually expand to several sections of the earthquake–affected area.

The CRUSH program is currently using 10 portable rock crushers supported by a total of 284 workers to process rubble at 9 sites in Petit–Goave. The portable crushers were built by Red Rhino Crushers in the United Kingdom, representatives of which came to Haiti in mid–October to train CHF local staff in how to use and maintain the machines.

CRUSH is unique in that it is the only large–scale program in Haiti that is actively converting rubble into material that can be used on–site to improve communities affected by the earthquake. Among other uses, CHF has been using sand and gravel to construct cement platforms for its shelter program. Additionally, CHF is accumulating gravel for use in critical road projects identified in concert with the local government, and will soon be delivering gravel to serve as floors of schools still operating out of tents.

The CRUSH program is also unique in that it dramatically reduces the transportation costs and bureaucratic obstacles associated with other rubble removal programs in Haiti. Suitable, approved rubble dump sites in virtually all parts of Haiti are either of insufficient size or are so far away from affected areas that they are cost prohibitive both in terms of time required to access them as well as money required to fuel the trucks. Processing the rubble on–site is much cheaper overall and will allow CHF to operate much more efficiently than other rubble removal programs in Haiti.

In less than two weeks, CHF's crushers have already processed nearly 1,000 cubic meters of rubble to produce an equivalent amount of sand and gravel.

Petit–Goave Mayor Marc Roland Justal was complimentary of CHF's program. "I love the new rubble recycling program that CHF is implementing here," said Justal as he toured one of CHF's recycling sites. The mayor continued, "Instead of just throwing rubble into the ocean or rivers, we can dispose of it on site and for useful purposes." The mayor promised to collaborate with CHF to identify the best possible uses for the processed rubble, in particular key dirt roads that would be reinforced by adding a layer of gravel.

The CRUSH program is paid for by USAID and will continue through February 2011.

FROM RELIEF WEB:

CHF Continues Reforestation and Erosion Control Efforts in the Rural Mountains of Haiti

Source: CHF International

Date: 16 Oct 2010

October 16, 2010—CHF is completing the third week of a three–month soil conservation and reforestation project in Marre Danjour, a rural mountain community high above downtown Petit–Goave.

Only 5 kilometers south of downtown Petit–Goave, the farming community of 5,000 is also the site of a crucial watershed – it hangs directly over the Riviere La Digue, the largest river in the area, and one that constantly threatens the city center during the rainy season. While the riverbed marking the lower boundary of the project site lies 300 meters (1,000 feet) above sea level, the upper reaches of the watershed climb up to more than 1,000 meters (3,300 feet). The area is the origin point of much flooding in the area, so CHF is installing terracing and vegetation that will mitigate against topsoil erosion as well as slow the velocity of water runoff.

CHF's work at Marre Danjour covers 50 hectares of land and will, when complete, account for 10 kilometers of stone terracing. Additionally, CHF will use the terraces to plant 2,000 fruit saplings, 2,000 hardwood saplings, 1,000 bamboo shoots, and 75,000 seedlings of various erosion–mitigating grasses and tubers.

CHF currently employs 132 residents of Marre Danjour to work on the project, each of whom receives at least US$5 per day for their effort. In addition to stabilizing the topsoil and preventing catastrophic downstream flooding, workers will take home a combined US$42,000 in salaries alone, a major stimulus for the economy of this rural community.

Since launching work in Petit–Goave in 2007, CHF has completed soil conservation and reforestation projects that have protected 250 hectares of land, all of it in rural mountains and foothills.

CHF's project at Marre Danjour is paid for by a generous private donation from the Brickman Group, a U.S.–based landscaping specialist. Established in 1939, Brickman is a leader in the commercial landscape industry with over 160 branches serving 29 states in the US. For further information, please visit their web site at www.brickmangroup.com.

per email from CHF:

WHERE WE ARE WORKING RIGHT NOW: We are working Port Au Prince (PaP) (namely Delmas, Petion–Ville, Cite Soleil, Port Au Prince and Carrefour). We are also working in Grand Goave, Jacmel, Petit Goave, Leogane, Petit Guinee, Cap Haitien, Martissant St. Marc and Gonaives as well as a host of other communities across Haiti. CASH FOR WORK PROGRAM
http://www.chfinternational.org/node/34048

CHF–Haiti Blog Update – Feb. 17, 2010: CHF Cash for Work Teams in Petit Goave Receive First Payroll

From the website: January 29, 2010 - CHF International (CHF) began its second phase of cleanup in Haiti yesterday by partnering with Haitian communities to clear essential routes through Port au Prince.

Nine "High Impact Labor Teams", each consisting of 12 people including a supervisor, fanned out across the municipality of Delmas to clean up key routes through the area. CHF provided teams with hats, gloves, t–shirts, wheelbarrows, boots, pickaxes, shovels, sledgehammers and hacksaws to remove rubble from roads and sites of destroyed buildings. This complements CHF's ongoing work with CHF–trained Haitian Caterpillar operators who have been clearing large amounts of debris from roads and Ministry buildings since the beginning of this week.

Working with the local mayors, who recruit community members, each team member works from 7:00am–1:30pm daily and is paid 200 Gourdes per day for their work - more than twice the average daily income in Haiti per day and equivalent to $5.00 US dollars. The objective of the work is not only essential clean up, but also to get people back to work in a constructive way, ensure they have income to provide for their family, and begin to revitalize the Haitian economy.

"We are hoping to employ up to 3,500 people within the next few months throughout Port–au–Prince for the clean–up," says Alberto Wilde, CHF's Country Director in Haiti. "Cash for work programs will be essential for kick–starting the Haitian economy after the earthquake and for helping families, many of whom have lost everything."

"We have covered about two acres of land next to the St. Luke hospital with gravel, and we set up so far 4 of a total of 15 large tents, where we will receive cholera patients. We have set up a diarrhea clinic there, where our staff will evaluate anyone with diarrhea, without them needing to go into either the St. Damien or St. Luke compounds. After screening, if it is likely cholera, we will bring them nearby to Doctors without Borders Cholera site. When they have reached their capacity of 250 beds, we will begin receiving the patients in our tents. We have a capacity for about 300 people".

November 9, 2010
Fr. Rick in HaitiFather Rick Frechette, Director of Nuestros Pequeños Hermanos/Nos Petits Freres et Soeurs (NPH/NPFS, Spanish and French for “Our Little Brothers and Sisters”) Haiti

EXCERPT: http://www.friendsoftheorphans.org/s/769/inner.aspx?sid=769&gid=1&pgid=252&cid=2449&ecid=2449&crid=0&calpgid=61&calcid=719

"We were very fortunate that Dr. Jeff from Ohio came with IV catheters that you put directly into the bone. We flew a team to Port–de–Paix yesterday to teach the sisters and their staff how to use it. So many small children have cholera, and it is nearly impossible when they are so dehydrated to find a vein for IV".

Fr. Rick Frechette
National Director NPFS Haiti

Friends of the Orphans:

Our Response
Cholera treatment in Haiti is being provided by Nuestros Pequeños Hermanos/Nos Petits Freres et Soeurs (NPH/NPFS, Spanish and French for “Our Little Brothers and Sisters”), which is supported by Friends of the Orphans. In addition, supplies are being delivered to various affected areas. NPH/NPFS is prepared to receive up to 400 patients at a tent site next to the St. Luke family hospital.

Support Needed
According to Fr. Rick Frechette, CP, D.O., who oversees all the NPH/NPFS programs in Haiti:

"What we need mostly are the IV catheters that go directly to the bone. The drills that put them in the bone are expensive. The catheters are $100 U.S. each. We sent what we had to the sisters in Port–au–Paix. We need about four more drills and 1,000 catheters for starters. We can buy these at a hospital in Ohio and get them here immediately. Even with the discounts we get, we still need about $90,000 total to buy these items."

Services offered: CHOLERA Epidemic Supplies * (ANY/ALL Types); Medical, Facility, Camp, Medical Camp; Medical, Facility, Capacity, Hospital Beds; Medical, Facility, Cholera, Cholera Treatment Center (CTC); Medical, Facility, Cholera, Rehydration Center (CTU or UTC)

HEAS Update posted by Dr. Keenan 11/22/10
I just arrived in today. I got some updates by folks on the ground. It seems the Cap Gynmansium is under better control with MSF and they are starting a new centre at Quartier Morin, HHA. Teams were supposed to arrive today, unsure how many did.

I visited Ebenezer Clinic in Haut Limbe today, they were overcrowded, 2 docs and 5 nurses, but doing better than last week. They seem to be managing. MSF has been giving them support as well and plan to establish a larger CTC there along with one at Bon Samaritan, Sean Hodges in Limbe. Everyone is trying their best but it's seems that staffing is a key problem.

Luckily the roads are open to Cap and supplies are flowing.

At my clinic, we must have had about 40 cases today. MSF was planning to send a tent and staff to help us as well but unsure of a date yet. As we have 3 medical personnel on the ground we have decided to keep patients overnight, as we see the massive overcrowding in Limbe. I guess we'll see how tonight goes.

So, it seems that for the north that having contact with MSF is a key measure of success. They too are very busy but at least they seem to have a good strategy.

In terms of volunteers, we need nurses/EMTs and docs throughout the region The soon we get this volunteer co–ordination happening the better, but truly volunteers need to stay for minimum of 10–14 days. Unless they've been to Haiti before any shorter time is not worthwhile as it takes time for orientation.

I will try to stay posted on this working group but clinic may be overwhelming these next few weeks.

Email from Dr. Keenan 11/11/10
I wanted to forward a little update regarding cholera in Haiti. It has very quickly become an epidemic. Our staff in country are doing the best they can do. Please, if you have friends/family interesting in donating direct them to:

https://www.canadahelps.org/DonationDetails.aspx?cookieCheck=true

I am trying to hire more Haitian staff to keep up to the demand.

Tiffany

25 cases and 3 deaths since november 1st

http://yfrog.com/76moedj

This is a photo of one of our docs carrying a 13 year old boy to a truck, for transport today to the hospital in Limbe.

The situation is dire. Our volunteer doctors are heading home on Monday and we will have our Haitian Doctor and Iranese alone next week, though I am looking for local reinforcements.

Our team will travel down Nov 21–December 3rd.

Keep us and the Haitians in your thoughts!!

NGO Coordinator at Jacmel Airport

The clinic is staffed 5 days a week by a nurse and 2 days a week with a physician

Global DIRT – (Disaster Immediate Response Team) 2010 Haiti Earthquake

Volunteer Camp · Open

Disaster Relief/Recovery

Web	globaldirt.org
Serves	Port au Prince & directly surrounding areas
Checks payable to	Global DIRT
Service	Temporary

Global DIRT is currently dedicating all man–power and resources to provide relief in any way possible to the victims of the recent earthquake that devastated the nation of Haiti.

We will continue serving in Haiti through the upcoming hurricane season and beyond, and this is made possible solely by our volunteers and the donations of our supporters. On behalf of the people of Haiti we thank you for your continued support!

.Global DIRT and Can–do.org on AC360
07/14/2010 – 00:26
Just a quick update for those who missed the flurry of tweets and Facebook messages. Global DIRT was mentioned on the July 13 episode of Anderson Cooper 360 (or AC360).

http://globaldirt.org/blog/can–do–globaldirt–and–cnn

Global DIRT is currently working with partners on fundraisers and events in and around the Portsmouth, NH region. We would like to thank all of those who have and continue to support us in our efforts to provide aid to the Haitian people. We will post information on events here as we have it!

For those who would like to volunteer to serve with Global DIRT, either on the ground or by assisting in fundraisers, please fill out the form on our Contact page with your information and we will be in touch. We are currently compiling information on potential volunteers for future endeavors, and are looking particularly for people with a medical background.

Of course, the easiest way you can support Global DIRT and the people of Haiti is through donations. 100% of all proceeds go directly to funding operations and helping to rebuild Haiti for a brighter tomorrow.

"MSF: providing medical assistance and emergency relief items in Tome/Kesen'numa city, Minamisanriku cho, Miyagi Pref."

FROM THE SITE:

Japan: MSF Teams Reach Hardest Hit Areas, Support Relief Effort
March 12, 2011

Two Doctors Without Borders/Médecins Sans Frontières (MSF) teams arrived by helicopter in Japan's Miyagi prefecture earlier today and then traveled on to the city of Sendai, one of the areas hardest hit by the 8.9 magnitude earthquake and the resulting tsunamis that battered northeast Japan on Friday afternoon.

The teams are comprised of medical and logistical staff and include Dr. Nobuko Kurosaki, MSF–Japan President and a pediatric surgeon. Three more helicopter flights are scheduled to bring additional MSF teams to the area early Sunday morning.

All MSF staff will work in coordination with the Japanese Disaster Medical Assistance Team (DMAT) and will assess the needs to see if the situation requires larger intervention by MSF. The MSF team is currently working in an evacuation center in Sendai, where people displaced by flooding and damage are receiving medical consultations.

The damage is stark, but MSF personnel report that it appears that medical needs are being met. "In some places, we saw that houses and buildings had been completely destroyed," said Mikiko Dotsu, the coordinator of the MSF assessment team. "Local people said the water from the tsunami had gone down from yesterday, but there was still a lot of flooding."

"The authorities said that there are 90 DMATs already working in Miyage prefecture," Dotsu added. "They seem to have enough people. There is a hospital referral system already set up and the hospitals are managing."

Although the medical situation in Sendai appears to be under control, the population has needs, Dotsu said. "At the moment, there is very little electricity and no water supply. People need food, blankets, and water. These needs are bigger than medical needs at the moment," said the assessment coordinator.

The team will soon be joined by additional MSF personnel and will continue their assessments of the situation.

Hoboken, New Jersey
On Saturday, November 3, MSF dispatched a doctor, nurse, and mental health specialist to Hoboken to assess medical and psychosocial care needs in the city. The team has been providing the only medical care in three shelters: Wallace public school, St Matthew's church, and Saint Peter and Paul. The team has also assessed several nursing homes in the area. Since Saturday, the team has conducted 60 medical consultations and 87 mental health counseling sessions. MSF has arranged for prescriptions to be refilled for 48 patients.

The majority of the patients, as in other locations where MSF is working, are suffering from chronic medical conditions such as hypertension and diabetes. Most of the patients are elderly and many are suffering from pre-existing mental illnesses that have only been exacerbated by the trauma associated with the hurricane.

NEW YORK, November 5, 2012 — Doctors Without Borders/Médecins Sans Frontières (MSF) teams, working alongside local community groups, are providing medical and mental health care to Hurricane Sandy–affected communities in the New York City boroughs of Brooklyn, Queens, and Staten Island, as well as Hoboken, New Jersey. The vast majority of the patients treated by MSF in the shelters and underserved communities have been elderly, homeless, or physically or mentally impaired.

Queens
A team of two doctors, nurse–practitioner, mental health specialist, nurse, and logistical–support staff have established a temporary clinic in a community room in a housing complex in the Arverne neighborhood of Rockaway, Queens. The medical team has treated 50 patients, most suffering from pre–existing conditions like hypertension, asthma and congestive heart failure. In the clinic, there have been routine prenatal consultations for several pregnant women.

The team has also been going door–to–door in high–rise apartments, alongside volunteers from various community groups, to conduct medical consultations with residents who have been without electricity since October 29, and who have had limited access to heat and water. The community groups, through volunteers, are carrying water and other supplies to residents of the buildings, including a 22–story apartment building.

Many of the residents visited are suffering some form of paraplegia, obesity or dementia, and have not been able to seek outside assistance since the hurricane hit. Several elderly patients have also received care by home visits.

Brooklyn
At the evacuation center located at FDR High School in Brooklyn, where 866 people have sought shelter, MSF has ensured consistent 24–hour medical care and coordination with physicians and registered nurses since November 1. The medical team has tended to 247 people, the majority of whom are suffering from upper respiratory tract infections, high blood pressure, diabetes, or psychological trauma. MSF is helping patients to secure refills for various prescription medications. The team has referred 10 patients to local hospitals for emergency care and transported several wheelchair–bound people to their homes.

FDR HIGH SCHOOL
5800 20 AVENUE
BROOKLYN, NY 11204

Staten Island
Since assessing the evacuation center at Susan E. Wagner High School on November 2, MSF medical and mental health teams have been providing support to the onsite response team, which has worked tirelessly since the hurricane to tend to the needs of their patients. The shelter houses approximately 385 people, with one–third of the population being under the age of 18.

At the shelter, MSF has provided a prescribing physician and organized a medicines procurement system with a local pharmacy that has been donating medical material and prescription medicines for evacuees. As a result, approximately a dozen individuals who have lost access to their prescription medicines for hypertension and other chronic conditions have received medication.

MSF has also donated blood–sugar rapid diagnostic testing kits for diabetic patients and nebulizers and medications for patients suffering from chronic respiratory conditions.

A two–person mental health team has provided therapy to several people exhibiting signs of mental trauma in the shelter. The team has also set up a recovery room for first–responders suffering from exhaustion after working multiple shifts without relief. The team has also conducted a training session for social workers and psychologists from Wagner High School to take on mental health services for people living in the shelter.

Hoboken, New Jersey
On Saturday, November 3, MSF dispatched a doctor, nurse, and mental health specialist to Hoboken to assess medical and psychosocial care needs in the city. The team has been providing the only medical care in three shelters: Wallace public school, St Matthew's church, and Saint Peter and Paul. From the website:

MSF has over 1,480 staff working in Gaza's health facilities, including public hospitals, field hospitals, clinics, and medical points throughout the Strip. Our teams provide surgical care, wound and burn care, malnutrition screening and treatment, maternal and pediatric services, physiotherapy, vaccination, mental health support, and care for non-communicable diseases, among other services. We also provide water and sanitation support and assist medical evacuations to our reconstructive surgery hospital in Amman, Jordan, where we provide evacuees with rehabilitative care.

Doctors Without Borders/Médecins Sans Frontières (MSF) Sudan Response

Medical Facility · Open

Nyala, South Darfur

Web www.doctorswithoutborders.org/what-we-do/where-we-work/sudan

From the website:

In April 2023, intense fighting broke out across Sudan, triggering one of the world's biggest humanitarian crises. MSF teams are providing medical care and humanitarian aid for people affected by the war.

Deadly drone strike on a busy market in South Darfur

October 16, 2026 — At least four people were killed, including a child, this morning in a drone strike that hit Almawashi market in Nyala, South Darfur, Sudan.

Eight people wounded in the strike are receiving care at the Ministry of Health's Nyala Teaching Hospital, which is supported by Doctors Without Borders/Médecins Sans Frontières (MSF).

The market was hit on the busiest day of the week, making civilian casualties inevitable. Once again, MSF calls on the Sudanese Armed Forces and all parties to the conflict to show respect for civilian lives and stop attacks on markets and other civilian areas. Civilians must be spared from this hideous violence.

Our work in Sudan

Since a bloody war erupted in Sudan in 2023, Doctors Without Borders/Médecins Sans Frontières (MSF) has quickly adapted activities to respond, despite security and administrative challenges. Our teams deliver medical and humanitarian assistance across many of the country's conflict-ravaged states.

Since the fighting broke out in April 2023, Doctors Without Borders/Médecins Sans Frontières (MSF) teams have been responding to the medical and humanitarian consequences in hospitals, clinics, and camps across the country. Our teams provide surgical and emergency care, malnutrition treatment, maternal and pediatric care, mental health support, vaccination, and other critical services people urgently need.

Once long ago, we all were children, simple, loving and caring. We chose to care about our world, our families and everyone around us. Somewhere along the way, we became mad; we lost our way as humanity. We began destroying and consuming our world and our hearts. We chose events and things as more important – than each others lives. The Raise Your Hand and Open Your Heart Foundation chooses to change that, to get people to help one another, no matter the crisis, the problem, or the effort.

A world united for ONE single common goal. HOPE. HOPE for each other, for our children, for our animals and for our environment.

You can be a part of this organization, by registering through the website, donating cash, time, your talents, volunteer or participate directly with the charities, people and organizations listed there. You can load new charities and even load your own problems. This way, we intend helping each other, as ONE family. Participate today by searching and navigating through the various regions and causes and taking a few hours each day to help heal the world through the website by using your talents, things and time. Thank You for being a part of the change.

Oceania
South America

HOW ARE WE KEPT ACCOUNTABLE?

The donor is notified, thanked and praised for making a donation, immediately upon payment. They are also automatically provided with a tax certificate. They remain anonymous on the system, but are progressed to the regional list of real donors.

They are explained that their funds are kept in trust, either for direct release for urgent need, or until a project comes up that is needed for and will NOT be used for anything else.

Once the payment is, the donor is informed that the payment is made to the charity, or cause. With a proof of payment attached in the system and a track able reference to verify that this has been done.

100% of the donation will be done, unless under extreme circumstance a charge or fee is incurred. In this instance, they will also be provided with proof of these charges.

Now, most organizations end here, but where Raise Your Hand will be different is that we will not only 'pay' the 100% donation over to the organization, we will require them to provide us with faxes or scanned emails of the use of this money and exactly what every cent is used for.

They will only receive an immediate 20% of the donation and until they prove that they can provide the proof that it is used what it is used for, we will not release the money.

If it is an ambassador or representative of the charity, and the entire donation is needed now, they will immediately be paid over, once they provide letters from where they will be purchasing goods, or provide direct invoices for us to pay on their behalf.

Let us say, as an example, The Red Cross needs $850000 (yes, they asked me for this), for fuel and the means to get aid across Pakistan. Now, what would be best is to find a Shell Petrol Depot there and pay them directly, with this proof of invoice and payment, our donors will feel that their money has gone to the right place.

If, we can, we will also provide them with photos of the delivery of their aid.

All of this allows our donors to know their money goes to the correct place at any given time, with proof and contactable verification of delivery of the aid money.
