Hot Lunch Program

Aside from education for the poorest children in the community, the Hot Lunch Program has turned into SOPUDEP Schools most important program as starvation is on the rise in Haiti. Now at a capacity of over 700 children, teachers and other members of the community including street kids and other schools, the Hot Lunch Program runs an average of five days a week to give many of these people their only meal of the day. Although the cost per student is a mere 14¢ to 25¢ they often have to greatly simplify and cut back on the program due to lack of funds and the current rise in food costs.
This food program was originally government funded within the school from 2002 to 2004 under President Jean–Bertrand Aristide, but when he was forcibly removed from power the program ceased to exist. With the help of The Sawatzky Family Foundation and SOPUDEP supporters the program was reinstated in 2008, but has again fallen on hard times. They do receive help from the National Food Program now (PNCS), but this only covers 40% of the need. With your help, this crucial program can feed many hungry children in the community of Pétion–Ville.

Teachers Salary

Until today SOPUDEP School has only managed to survive with the dedication of a passionate, hardworking staff that often works for months without compensation. Their resilience is evident on many levels. Their average salary is only $500 (US) per year...They have no text books, electricity, or proper roof and windows to keep out the wind and rain... They are armed only with dilapidated chalkboards, rough desks made of planks and their ingenuity to teach their students to read, write, and do mathematics among other subjects. These university–educated professionals have done so much with very little and recognize the value of what they are doing for these children.

Textbook Fund

Initialy this fundraiser was started last summer for the 08/09 school year, but because of legal trouble that came in the form of an illegal eviction notice from the Mayor of Petion–Ville three years before their lease was up, things went sideways and much of the textbook funds had to go to legal expenses. So this year we are trying it again and it looks like we may have a decent amount to get going. This project would bring Math, Science, Language, and History textbooks to the older students for the very first time in SOPUDEP's seven year history. With the addition of proper textbooks from which the children can study, it will save on the long–term supply costs for the school as the books can be reused throughout the years. At this time all students regardless of grade use a workbook (except for the 08/09 school year as there was no funds for that) which contains both study material and exercises. It works well for the younger students and is cheaper but is not in depth enough for the older students. With the addition of real textbooks, the seniors will receive a more substantial education due to the more detailed explanations, diagrams, and pictures a textbook can provide. It thus closes even more of the "educational quality" gap that separates students in the upper echelons of the privatized education system and those trying to rebuild their lives and their society from the ground up.

Street Kids Housing and Education Program

SOPUDEP School's mission has always been to help the poorest children in their community of Pétion–Ville and although they have had children facing all dimensions of hardships, including ex street children and Restevak's (child slaves), they have never had students with no place to call home. On January 16th 2009 the school opened its doors to six homeless boys ranging in age from 12 to 17 to whom they were made aware of by a local activist only weeks prior. As of September 2009 the school is educating 31 street kids. School Director and Founder Rea Dol explains that they have always wanted to include the street kids of their community. Although SOPUDEP is now giving these young men and women an education in hopes to set them on a new path and meals from their hot lunch program (when they have the funds) they simply cannot afford to board them. Giving them a real home would dramatically change these children's lives as they could concentrate on their studies and not have to worry about where they might sleep tonight. It would offer them security they have never had.

The initial costs would be in the range of $6000 US for a three year contract on a two level building that could house a number of homeless boys and girls. As these children will need such things as clothes, bathroom supplies, breakfast and dinner, and the necessities of life on an ongoing basis we are deeming this to be a long–term project that would probably exist apart from the school as it has a life of its own. As it comes together I will keep you up to speed.

Update, February 23, 2010– Temporary School
http://www.sopudep.org/category/access/public

It's just a month and a half after the earthquake and we are starting to hear about a new cause for a devastated Haiti. Development! Tourism, agriculture, "industrial parks", strengthening Haiti's government or removing it and installing a new one. This has been touted the magic "new beginning" to a country that has been under foreign control since Christopher Columbus sanctioned it fit for European agriculture production way back when. Some ideas are valid and responsible, but many are opportunistic and will move a much needed income for Haiti out of the country or into the pockets of Haiti's elite. It is a very important topic of conversation and we certainly should pay attention to what's in the works for Haiti's future, but the type of rebuilding forefront in our mind should still be about providing the basics of everyday life for these affected Haitians.

Update January 30, 2010
http://www.sopudep.org/category/access/public
Public
SOPUDEP did have to abandon their school building about four days ago. It was being used as a shelter, but the stench of dead bodies was getting to strong. School director Réa Dol doesn't think it will ever work again as a school anyways because there was structural damage and all but three homes were destroyed in the neighborhood. It is time now for the school to relocate!

Now that being said, SOPUDEP did start payments on a piece of land last year in anticipation of building a new school for 2012 (when their lease would run up on their current building). Thanks to a generous donor from San Francisco, all but $20,000 of the original $60,000 is owing on the land. Seth Donnelly from the Bay area will most likely head up this fundraising project to pay off the land that will secure the schools future.

Dear Friends and Colleagues,

The cholera epidemic in Haiti is FAR from over. Despite reports from the Haitian Ministry of Health and UN agencies that the number of cholera cases and deaths has stabilized, those of us working on the frontlines of cholera response know a grimmer reality. Not only is the infection nationally endemic, Haiti's rainy season is almost upon us. Because Haiti's cholera epidemic is the result of terrible sanitation conditions, the heavy rains, flooding, and mudslides Haiti faces in the coming months will severely exacerbate the situation.

As the rains fall, the number of cholera cases will rise. This health disaster has been neglected by the international news media, disappearing from the news shortly after it struck in October. Unfortunately, the disaster has NOT disappeared from Haiti. In five months, a disease that can be both easily treated, and easily cured, has taken over 4,000 lives.

J/P HRO is leading the charge of countless organizations in Haiti currently combating the epidemic. We've delivered more than 100 metric tons of clinical medical supplies to every corner of the country, supplying Cholera Treatment Centers (CTC) and units (CTU) in several rural, isolated communities where cholera can be a death sentence. But the J/P HRO cholera response goes well beyond delivering just supplies; our missions provide international volunteer physicians, Haitian medical doctors, and highly trained Haitian health promotion workers to communities who have not encountered international aid in decades, if ever. J/P HRO medical personnel activate these communities towards sustainable means of mitigation, and empower them to end unnecessary deaths due to cholera. Half–day cholera prevention seminars, mobile care clinics, and extensive training on how to use the supplies provided give the Haitian people in these communities a fighting chance.

J/P missions target remote villages and towns where often the nearest paved road is farther than a day's walk, if it can be reached by foot at all. Therefore, the only way to assist these communities is by air, and since December 2010 J/P HRO has partnered with the United Nations Humanitarian Air Service (UNHAS) fleet of MI–8 helicopters to serve these devastated populations. Collaborating with the UN gave us free and unlimited access to helicopters. But the perception that cholera has stabilized and is no longer a threat is now threatening the very people who are in greatest need. UNHAS has not been able to secure funding, and UN helicopter missions will be discontinued March 31st. In light of losing such a crucial resource, the need to fund helicopter missions to remote areas in Haiti is more critical than ever.

Please take the time to read about everything J/P HRO is doing in Haiti and donate to our cause. Your money will go directly towards improving the lives of Haitians and building a sustainable future for Haiti.

Thanks for all you do.

Sean Penn / CEO

See website for update on Cholera response details.

NEEDS LIST FOR CHOLERA RESPONSE:

Ringers Lactate 1000cc IV bags
IV Fluids
Oral Rehydration Salts
24 gauge needle IV sets
CHUX or absorbent bed pads

Pedialyte
Personal Protective Gear (Gowns/Masks)
Stool Sample Containers
Doxycline 300 mg tabs

CTU/UTC Contact: medical @ jphro.org

J/P Haitian Relief Organization and The Ministère de la Santé Publique et de la Population Respond to the Cholera Epidemic

12.03.2010- PORT-AU-PRINCE, HAITI -- J/P Haitian Relief Organization (J/P HRO) and The Ministère de la Santé Publique et de la Population (MSPP) have launched a comprehensive mission to assess ongoing medical and human resources needs and deliver supplies in response to Haiti's cholera epidemic. The activity is being conducted nationwide in strategic partnership with Partners In Health (PIH), with particular emphasis on the ongoing epidemic in isolated rural areas. This collaboration will target centers treating cholera throughout Haiti, and effectively direct human and material resources to these locations.

Crystal – Volunteer Coordinator jpvolunteer @ jphro.org

If you are an EMT volunteer gigs related to Cholera treatment with J/P HRO, you can register at:

http://org2.democracyinaction.org/o/6591/signup_page/medic-vol1

BE SURE TO SPECIFY YOUR INTEREST IN HELPING WITH THE CHOLERA EPIDEMIC!!

JP is seeking licensed health care professionals to assist in staffing various cholera clinics near Port-au-Prince. We are working with Partner's In Health who have requested the need for additional help. Many hands are needed and the work is challenging. We are accepting EMT's whose experience would be helpful in keeping IV lines checked, Paramedics who can administer IV's and of course RNs and MDs.

We will house, feed, transport, provide translators and keep safe all who sign in with JP. We have limited space, so at the very least, we will refer our applicants directly to other organizations.

Please note that working with cholera patients requires a level of care that compassionately understands the limitations of working in Haiti. The conditions are raw and viewed primitive at times because of inadequate resources. One should be in good physical health, come with egos checked at home and hearts that will embrace the suffering.
