Boston Globe Article

By Megan McKee
Globe Correspondent / June 10, 2010

Hair salons, pet groomers, and veterinarians in Waltham, Lexington, Acton, and Sherborn have joined a nationwide effort to collect hair and fur clippings for use in natural-fiber oil booms, which are being assembled by hundreds of volunteers in an effort to stem the environmental damage from the massive British Petroleum oil spill in the Gulf of Mexico.

"People are surprised about the concept," said Marlene Maffei-Ryan, owner of the As You Like It Hair Salon in Acton. However, she said, once people understand the idea, they're excited about it. Some clients have even had more hair cut off than they originally intended after hearing where the clippings were headed, she said.

"It's been great. We don't do anything with the hair anyhow. We bag it and trash it . . . It's a good cause and it's easy work for us," she said.

The effort, which has brought in 570 businesses across Massachusetts, is being mounted by the group Matter of Trust on a website devoted to reducing the carbon imprint of dogs. The group is collecting clippings from salons, groomers, alpaca and llama farmers, individuals, veterinarians, and pet owners. The organization's president, Lisa Craig Gautier, said she is receiving thousands of e-mails per day, and most are from those wishing to donate.

The organization sends out e-mails with addresses of warehouses where the donors should send clippings. Once there, volunteers stuff them into nylon stockings and tie off the ends. Then they're ready for deployment.

Craig Gauthier said BP has decided not to use natural-fiber booms in its cleanup effort but rather rely on synthetic booms. But harbormasters in Florida have announced they will use the booms, Craig Gauthier said, and Matter of Trust is hoping the response to its campaign will help change the BP approach.

The organization has about 10 miles of boom ready to go.

"We don't have anything against synthetic boom, but you have to drill oil to make it," said Craig Gautier. "This is a renewable resource that we're diverting from a landfill."

Locally, Waltham's Veterinary and Emergency Center of New England is one of the entities participating in the effort.

"We're always shaving areas" on their animal patients for medical procedures, said Sharon Gately, spokeswoman for the center, "and it usually just goes to waste. I just thought it was such a good idea."

Gately said the Waltham animal hospital also will have a bin out front to collect nylons; Craig Gautier said Hooters just donated 100,000 pairs.

At Lexington's Blue salon, desk manager Michael Surette said the salon has already made four shipments thanks to the trashbag-size amount of clippings that are disposed of daily.

A neighbor of the salon has volunteered to collect and mail the bags of donated hair.

In Sherborn, Serena's Groom Room is doing warm-weather shave-downs for pets, which means it is an opportune time to participate in the program, said owner Serena Keating.

"I think this is a really cool way for us being able to help a really bad situation," said Keating. "This is a little more global for us. . . It's something indirectly all of my customers have done a lot to help."

In the meantime, Matter of Trust is using social media websites to round up volunteers in places like Alabama and Florida to stuff pantyhose with clippings, and the group is urging people to contact the government to press for the booms to be used.

The organization was founded in 1998 by Craig Gautier and her husband, Patrice Oliver Gautier, an executive at Apple Inc., and is involved in multiple efforts to promote the reuse of materials, both natural and manmade. The organization has made mats from hair clippings to clean up oil spills since 2000.

Craig Gautier is hoping her organization's talks with BP and the federal government, as well as the the goodwill of tens of thousands of businesses and hundreds of thousands of individuals who are donating, will turn the tide at the oil company.

"We absolutely can put these booms in the water," she said. "It's really up to the people of North America to decide.

http://www.nola.com/news/gulf-oil-spill/index.ssf/2010/05/engineers_will_not_use_hair_to.html

Engineers will not use hair to soak Gulf oil spill
By The Associated Press
May 22, 2010, 1:41PM

View full sizeCasey Kreider, Lancaster Newspapers/The Associated PressThis alpaca's coat was shorn in hopes the hair would soak up oil from the Deepwater Horizon leak in the Gulf of Mexico. Engineers will not use booms made out of hair to soak up the growing oil spill in the Gulf of Mexico.

Barbers have collected hair in hopes that it could contain the ooze as it invades deeper into coastal marshland. But crews said Saturday they concluded using the hair was not feasible, and the organizations collecting the hair were asked to stop doing so.

Engineers said a test conducted in February during an oil spill in Texas showed that commercial boom absorbed more oil and less water than hair boom.

Charlie Henry of the National Oceanic and Atmospheric Administration said booms made from hair became water-logged and sank within a short period of time.

GULF COAST – HOW EVERYONE CAN HELP!
ALL salons, groomers, wool & alpaca fleece farmers and individuals can sign up to donate hair, fur, fleece, feathers, nylons and funding...

A) We have many temporarily donated warehouses of various sizes strategically placed along the Gulf Coast. We are coordinating space for donations and emailing addresses, to everyone who signs up, to make sure donations are effectively distributed.

B) Please sign up to our database. It's FREE and It's FAST.

(SEE WEBSITE FOR MORE DETAILS)

http://matteroftrust.org/programs/natural.html

We have 3 types of programs:

1.Manmade Surplus (reuse and recycling of furniture, clothes, instruments, supplies, etc.)

2.Natural Surplus (products using materials found abundantly in nature)

3.Eco-Educational (environmental awareness and media projects)

Linking Life to its Promise. The National Cristina Foundation is a not–for–profit foundation dedicated to the support of training through donated technology. For more than 25 years we have encouraged companies and individuals to donate computers and other technology, which is then matched to charities, schools and public agencies in all 50 states, Canada, and in many countries around the world.

Computer Donation Requirements

* Pentium III & Higher CPUs (486 and Pentium I and II no longer accepted). Alternative CPUs accepted if Pentium III equivalent or better.
* If your donation includes a complete system (Hard Drive, Monitor, Keyboard, & Mouse), use the "PC Desktop" or "Mac Desktop" category on the donation screens that follow. If not, please use the "Partial CPU" checkbox.
* If possible, please include Software License Agreements for installed software.
* Hardware needing repair is considered on a case–by–case basis where partner organizations have repair capabilities.

Toxic red sludge reaches the Danube River
(a waste product of aluminum production)

http://news.yahoo.com/s/ap/20101008/ap_on_bi_ge/eu_hungary_sludge_flood;_ylt=Amr8iZcekajPNbxJYWkS6HZH2ocA;_ylu=X3oDMTNxbTVmOG5kBGFzc2V0Ay9zL2FwLzIwMTAxMDA4L2FwX29uX2JpX2dlL2V1X2h1bmdhcnlfc2x1ZGdlX2Zsb29kBGNjb2RlA21wX2VjXzhfMTAEY3BvcwM3BHBvcwM3BHNlYwN5bl90b3Bfc3RvcmllcwRzbGsDdG94aWNyZWRzbHVk

KOLONTAR, Hungary – Red sludge flowed into the Danube River on Thursday, threatening a half–dozen nations along one of Europe's key waterways. Monitors took samples every few hour to measure damage from the toxic spill and emergency officials declared one Hungarian tributary dead.

...

At monitoring stations in Croatia, Serbia and Romania, officials were taking river samples every few hours, though experts hoped the river's huge water volume would blunt the impact of the spill.

...

"Life in the Marcal River has been extinguished," Dobson said of the waterway, which is fed by streams around the accident site and carried the waste into the Raba River, which then flows into the Danube.

...

An environmental group that monitors threats to the Danube said the breached reservoir was on a 2006 watch list of some 100 industrial sites that were at risk for accidents that could contaminate the 1,775–mile–long river.

Headers: Show All Headers | Show Mailing List Information

Absolutely they will be geocoded and timestamped. We intend to collect time series of images over the next weeks/months and and these will be distributed as tiles that can be added as overlays or base maps to other web map apps that are based on google maps or openlayers or the like.

They are out shooting today, but mostly training local students to do the work, we have sent down 10 canons with the chdk, but it is totally conceivable to do the shooting with mobile phones using an intevalometer app.

wrote:

Sorry if I wasnt clear. We are doing this with normal digital cameras and kites and balloons. This has nothing to do with the mobile app really.

Jeff

On Fri, May 7, 2010 at 9:33 AM, Yobie Benjamin <yobie @acm.org> wrote:

Can you write the instructions? We would have to combine this with the mobile apps functions to come up with a "1 pager". Realistically there are multiple protocols to do this:

What to do if you have an iPhone or Android?

2 megapixel iPhones (non video capable)
3.2 megapixel or above iPhone and Androids (video and still photo capable)

What to do if you have a stand alone video camera? (applies also to video uploads from iPhones and Androids)

gulfoilspillvideo is an account I have setup in YOUTUBE and we can upload all videos to this account BUT we need cc folks to reach out to YOUTUBE and/or Google to allow unlimited uploads to this account. I am unaware if Heather or Andrew have a special account in YOUTUBE

What to do if you have a still photo?

I do not have an account in Flickr or Picasa though I can setup an account. CC (Heather or Andrew) again need to call the selected photo site and get an unlimited upload account.

It is CRITICAL that EVERY video and still photo be geo–tagged OR have some location description (closest address is good but at the very least Parish/County, State (stand alone still or video cameras will not have geo tag capabilities) and each should have date and time stamps. Tags would help greatly (some unique hashtag will be better... we don't want 10,000,000 search returns on oiled birds. We'll do better with something like
#CC_oiled_birds... a more knowledgeable person can create those tags)

My 2 cents

On Fri, May 7, 2010 at 9:09 AM, Jeffrey Johnson
wrote:

Hi all,

The grassroots mapping folks have deployed to the gulf to begin working with local groups to low–altitude, low–cost, yet very high–res aerial imagery capture. They have brought gear and cameras to distribute, and now have a small army of local students and volunteers to help, and are setting up training sessions.

http://wiki.grassrootsmapping.org/show/GrassrootsMappingGulfCoastOilSpill
http://grassrootsmapping.org/

They would like to put together a double sided '1 pager' that explains the process and has contact information etc on it (see below).

Is there a graphic artist or similar on one of these lists that can assist with this? I can work on the content with someone, but my design skillz are sorely lacking.

Thanks,

Jeff

To: Liz Barry
grassrootsmapping @googlegroups.com,
Nathan Cooke

Hi, all –

New york team, Jeff Johnson, and Nathan Cooke... would you be willing to help with this?

we're setting up training sessions right now and it would be wonderful to have a single sheet hand out that covers:

– checklist of needed materials (see the illustration on the grassrootsmapping wiki)
– quick rundown of how to use the cameras with the CHDK, focus on keeping batteries charged
– who to ask for help
– where to sign up as a volunteer
– contact information and where to upload the imagery
– where to print out more of the flyer itself

perhaps that's too much for one page. But some way we could have that hand out to give out at the trainings would be super.

maybe either as a wiki page or a google doc, maybe google doc is better. that way we can refine it as we learn about what people are confused about.

best,
jeff

Hi All, In case its needed and not crossed these wires yet, a bunch of data on
the Gulf oil spill is discussed in the below messages from a
conservation GIS mailing list (SCGIS).

Lars

Joseph Kerski 5/4/2010 9:22 PM >>>

All:
In addition to the ArcGIS Online data already mentioned:

Interactive map that ESRI has posted that allows the viewing of
location-based feeds, including news and videos, here:

http://www.esri.com/services/disaster-response/gulf-oil-spill-2010/index.html

This application is powered by ArcGIS Server. Individuals can add data
to this mapping application. The ability to add content is provided by
ArcGIS Server 10 beta hosted in the Amazon Web Service infrastructure.

If you want to dig deeper and use some remotely sensed imagery, you
might try some MODIS data.
All MODIS data are free, and there are several images of the oil
slick:
http://rapidfire.sci.gsfc.nasa.gov/

For daily images see:
http://rapidfire.sci.gsfc.nasa.gov/subsets/?subset=USA7

This page provides GIS compatible imagery: Select "more info," select
the granule of interest from the list at the bottom of the page. Click
on the link to get an uncorrected 5-minute swath image, down to 250
meter resolution. Make sure you also download the world file so the
image will be georegistered within your GIS. You could also download a
KML and use it in ArcGIS Explorer.

For example, I found a 250m MODIS image with world file available on:
http://rapidfire.sci.gsfc.nasa.gov/gallery/?2010119-0429/Louisiana.A2010119.1648.250m.jpg

Subject: [CrisisMappers] citizen (grassroots) mapping effort of spill coastline

Ok we've had a couple responses and will hopefully have someone down there with some ballooning/kiting/airplaning equipment by tomorrow.

Does anyone have more contacts of folks on the ground there who we could connect with and help to document not only the spill's arrival onshore, but the citizen response? We'd like to capture high–resolution low–altitude imagery of specific sites for documentation purposes (i.e. possible legal role in the litigation) as well as for media coverage...

I want to emphasis that we're not trying to map the entire spill nor 'outdo' official mapping efforts, but to focus on documenting the risks/damage to specific sites and good enough resolution to see specific effects. Not really for immediate crisis response, but as a way of adding another independent data source for analysis or press coverage. We're also taking the position that we won't know how useful the data will be until later – but it's inexpensive to do.

Any additional local contacts in the spill zone would be appreciated, as would suggestions of high–relevance sites to focus on.

To join in the organizing effort or just listen in, join the Grasroots Mapping mailing list at http://groups.google.com/group/grassrootsmapping/ or learn more about our tools/techniques at http://grassrootsmapping.org

Best,
Jeff

On Mon, May 3, 2010 at 11:52 AM, Jeffrey Warren wrote:

I don't know if it'd be useful to have a matching crowdsourced aerial imaging campaign (using balloons and kites as in grassrootsmapping.org), but if there's any interest, some of us at the grassrootsmapping mailing list would love to help.

An alternative public domain dataset to the official story might help empower those who's lives are being affected directly.

On May 3, 2010 11:23 AM, "Anne" wrote:

First Hurricane Katrina and now the BP oil spill. It really does feel like too much. A man named Jason told me this today. "Well, I was a wholesaler / retailer." He buys fish from the boats and re sells it in New Orleans. But today Jason spoke of his livelihood in the past tense. What else can we think when oil is gushing into our Gulf of Mexico?

These are the stories that we are mapping:
http://www.oilspill.labucketbrigade.org/
; via (504) 27 27 OIL

There are two dynamics happening on this, day three of our Oil Spill Crisis Map. I thought it might be helpful to the larger community to elucidate them. We have a great team at the Louisiana Bucket Brigade: Mariko, Shannon, Anna, Clayton and I, along with much guidance and support from Tulane University's Zach Holden and Dr.'s Nancy Mock and Nathan Morrow.

Item One: Coordinating aid in a disaster zone

In Hurricane Katrina's aftermath I recall watching an aid worker in a truck of some kind – Red Cross or World Vision – drive by and just look at me out of their window. Me, a hurricane victim! But at its best aid empowers local people, and so many organizations did this after Hurricane Katrina. Our newspaper – The Times Picayune – ran a headline on the first anniversary of the storm. It was a giant THANK YOU for all of the help. We needed it then and we need it now.

As with Katrina, lots of organizations have come in, and this is true regarding mapping. We are trying to coordinate many different sets of people doing many different things. I am reminded of the piece that Patrick wrote regarding an SMS Code of Conduct for Humanitarian

Response. Yes, one is needed, but perhaps it's not so different from whatever the code of conduct is for Humanitarian Response in general.

Some sort of Code might be especially useful for disasters here in the U.S. While disasters in other parts of the world have barriers of geography and language, this U.S. based disaster is comparably accessible. And so there are potentially more players to manage. In this case, managing all of these players has been nearly as challenging as dealing with this oil spill. If I am not mistaken, this is the first time Ushahidi has been deployed for a U.S. disaster. I know it has been used for crime maps in Atlanta and Snowmaggedon in D.C., but this is the first U.S. disaster response. Am I right? You learn a lot by being first!

One note to those who help people in disaster zones: don't be too high tech. Some of the tools being offered are just too fancy to be utilized by real people. Other people are so bogged down in tech speak that we can't understand what they are saying.

Item two: Populating the map

We have another long day tomorrow and it's already 12:30. I'll finish this tomorrow.

Thanks for all of the help, advice and good wishes. The spirit of the Crisis Mappers is important to us – I love the vibe and the appreciation of what is happening on the ground. On this ground now we are expecting oil. And shrimpers stand around waiting as Red Cross trucks drive up and offer lunch. No one wants to take it. Sometimes, though, you just don't have a choice.

Anne

Education

* What is climate change? Find out at EPA for Kids. Information, links, games and animations from the Environmental Protection Agency.
* Learn about Renewable Energy Basics and Clean Energy Technologies. Check out the Solar Oven Challenge.
* Visit Science Daily to find out about earth, climate and environmental technologies.
* The LoraxTM Project: Student Earth Day and Classroom Activities encourage educators and students to celebrate the Lorax's message and pledge to beautify and conserve their school and environment.

Policy

* No Child Left Inside Act strengthens U. S. environmental education inside and outside the classroom.
* President Obama plans to invest in alternative and renewable energy, end addiction to foreign oil, and address the global climate crisis. Read about U. S. Energy and the Environment.
* See Massachusetts Energy and Environmental Affairs for key initiatives, resources and services.

Resources

Our resource page is a reference to help you live greener. Please let us know if you would like us to add a resource.

Tip: Recycle your compact fluorescent lights (CFLs) at the local Acton Ace Hardware.

Tip: Reduce junkmail; stop delivery of phone directories at www.yellowpagesgoesgreen.org.

Tip: The Acton Memorial Library has three Kill–A–Watt electric usage meters for loan to Acton residents. The meters plug into a wall socket and an appliance to assess how efficiently the appliance works by displaying the power consumption in kilowatt–hour. For information, call the Reference Desk (978–264–9641 option 3).

Households

Recycling, Low Impact Living, Toolkits, Products and Rebates

* The Acton Water District is offering conservation rebates for 2010 on new toilets and washing machines. To be eligible for the rebates, toilets must be EPA WaterSense labeled and clothes washers must meet CEE Tier 3 requirements. For more information and program eligibility, visit actonwater.com. The District also has indoor and outdoor conservation devices available free of charge to customers; stop by the offices at 693 Massachusetts Avenue for details. The Acton Water District will sell rain barrels again in the spring. new!
* Earth 911 is a guide to local resources including recycling centers, instructions on how to recycle, pollution prevention and how to help protect the environment.
* Acton FreeCycle is a nonprofit movement of people who are giving (and getting) stuff for free in their own towns and keeping good stuff out of landfills.
* Campaign Earth offers simple solutions to today's most pressing environmental issue, climate change. See straightforward actions that help everyone make a difference.
* Concord Conserves is a handbook for low impact living. This online resource deals with combating climate change and environmental degradation.
* Natural Resources Defense Council provides how–to guides and a Green Living Toolkit.
* Green Peony is a daily website for people who want to live a happy, healthy, and green lifestyle.
* Healthy Lawns for Families offers alternatives to pesticides for lawn care.

Agriculture

Community Supported Agriculture (CSA) and Local Farms

* Acton Boxborough Farmer's Market is held each Sunday from 10am to 1pm, July 12 through November 1, in West Acton Village.
* Local Harvest tells you everything you need to know about supporting local food production and consumption including a searchable list of local farms and farmer's markets, harvest dates, forums, blogs, newsletters, and recipes.

Boston rolls out new bike–sharing program
Posted by Sara Brown July 28, 2011 05:48 PM

Riders in Boston's bike share program head out from City Hall plaza today.

By Sara Brown, Town Correspondent

Boston's new bike–sharing program officially launched today, with bicycles eventually available at 61 stations for jaunts around the city.

Mayor Thomas M. Menino presided over the ribbon–cutting ceremony for the program at 11 a.m. at City Hall Plaza. To celebrate its launch, registered Hubway members and employees of sponsors will ride 200 of the bikes around the city today.

“This is a great day for Boston,” Menino said. “New Balance Hubway promotes a new, environmentally friendly way of getting around and I hope that all residents use the system."

Some new customers welcomed the new outlet to traverse Boston.

Karly Burke, a Bay Village resident, said she joined the Hubway program last week and was excited about its arrival. As she checked out a bike in front of the Boston Public Library, she said she planned to use the bikes mostly "around town, for errands, and to meet people out."

As around one dozen of the first people to test the bikes cycled down Newbury Street, they said they were greeted with cheers and applause from onlookers.

“It was a really great ride, and nice having a big group,” said Kelly Gray, 30, a digital marketing manager at New Balance, the title sponsor of the new program. “There was a lot of excitement around the city.”

Gray, who owns and regularly rides her own bicycle, said the brand new, three–gear Hubway bikes were sturdy, easy to use, and the seats were “super comfortable.”

“I just rode from City Hall and my butt doesn’t hurt,” she said.

Of the bike stations, about 18 will be in the the Back Bay and Fenway–Kenmore, with four around the Boston University campus and Kenmore Square, stations near Fenway Park, Northeastern University, and Colleges of the Fenway, and Back Bay stations ranging from the Newbury Street to the Boston Public Library.

Bikes will also be available at three Beacon Hill stations: on Cambridge Street at Blossom Street; at the Charles Circle footbridge, and on Beacon Street at Brimmer Street. In Allston, there were seven active stations as of today.

The Hubway program allows people to rent one of about 600 bikes for short rides around the city. There are three membership options with varying prices: an annual subscription, a three–day membership, and a 24–hour membership.

Rides shorter than 30 minutes are free for all members, with charges accrued for each half–hour of riding time.

Washington, D.C., Montreal, and London have similar systems.

Also on–line: The Globe's Eric Moskowitz tested the Washington bike–sharing system.

Correspondent Jamie Lutz contributed to this report.

'PPE for the People' campaign to produce and distribute masks in Boston
By Susan Klimczak (SETC) and Joe Tache (PSL)

The South End Technology Center @ Tent City and the Boston branch of the Party for Socialism and Liberation announce our campaign, “PPE for the People.” We are producing and distributing protective masks to frontline workers and people living in Boston’s oppressed communities, who are suffering disproportionately during this COVID–19 pandemic.

As Mel King, the founder of SETC always says, we want a city and a world that works for everyone. We cannot stand by and watch as this crisis lays bare the profound inequity and injustice in our city and country for all to see. Our Love for the People calls us into action; to both serve our communities and raise demands for a new form of society organized around human needs, rather than corporate profits.
a volunteer sews olsen masks at a sewing machine.

PSL and SETC volunteers make masks. Photo by South End Technology Center. Used with permission.

Both in Boston and across the country, new data reveals an alarming trend that COVID–19 is infecting and killing people of color at a disproportionately higher rate. As the U.S. Surgeon General Dr. Jerome Adams recently pointed out, Black, Latino and Native American people are not biologically or genetically predisposed to get COVID–19. People of color are predisposed to higher risk of exposure because most do not have jobs that allow them to work from home; because of inequities in healthcare and income that make them more likely to suffer diseases that put them at risk for severe complications from the virus; because — in the case of those living in places like the Navajo Nation and Detroit — they experience a lack of access to water for recommended frequent hand–washing. As of April 9, in Boston, 72% of those who have tested positive COVID–19 are people of color.

The question of wearing masks is also complicated by racism. People of color are increasingly saying that they don’t feel safe wearing masks. In a Boston Globe op–ed, Aaron Thomas wrote that the practice “could lead to unintended attention, and ultimately a life–or–death situation…[and that] the fear of being mistaken for an armed robber or assailant is greater than the fear of contracting COVID–19.” On the other hand, on April 11, a man in Philadelphia was dragged off of a public bus by police for not wearing a mask. This pandemic is shaped by capitalism and racism, and the fight against racism must be at the top of the list of priorities for any COVID–19 response.

Overall, as COVID–19 continues to rapidly spread in Massachusetts, workers in health care, grocery, custodial, food service and other sectors have clearly expressed their desperate need for personal protective equipment, including masks. Some of our most vulnerable such as elders, returning citizens and folks in recovery also have expressed needs. Additionally, on April 3, the Centers for Disease Control and Prevention officially recommended that all individuals wear face coverings in public settings where social distancing is difficult to maintain, as it is in cities like Boston. Clearly, the need for protective masks and the need to address the inequities and injustices at work in our community is dire, and demand will only increase as Massachusetts approaches its COVID–19 “surge.”

SETC youth, staff and volunteers, along with PSL organizers are fabricating four types of masks with laser cutters, 3D printers and sewing machines in Fab Lab Boston:

3D printed face shields with clear protective covers
sewn Olson face masks with filters inserted in pockets that can be fitted with skin–safe double–sided tape for those at higher risk for exposure
sewn face masks for everyday use by the people
and 3D printed N95–style masks that have demonstrated a potential to pass fit tests with proper filtering.

A young man wears a 3d printed face mask and holds two hand sewn masks

Photo by the South End Technology Center. Used with permission.

PPE for the People has already provided over 150 masks to people like the residents and Community Table workers at the Haley House, who are serving 70 free meals per day during the pandemic, to workers in the temporary shelter tents set up for people experiencing homelessness in Lower Roxbury, to young people distributing meals to elders at Madison Park, to nurses, to grocery workers, to families living in subsidized housing and to workers serving students with disabilities. The campaign will be expanding distribution in the coming days and weeks. Essential workers and families, particularly in Grove Hall, South End and Roxbury, are encouraged to reach out if their work and/or living conditions puts them in need of protective masks.

While the PPE for the People will do everything in its power to provide masks to those who need them, the campaign will inevitably be limited in scope. Neither the SETC nor the PSL — or the entire network of Boston area Fab Labs and makerspaces — have the manufacturing capacity to meet the vast need for masks in Boston. Ultimately, the responsibility and moral imperative for addressing this crisis falls on the U.S. government. Both Governor Baker and Donald Trump have special powers to take immediate action on this issue. As reported by The Boston Globe, the state of emergency currently in place in Massachusetts allows Governor Baker to “take possession (1) of any land or building, machinery or equipment…which may be necessary or convenient… for the better protection or welfare of the commonwealth or its inhabitants.” The Defense Production Act of 1950 grants President Trump similar powers to rapidly ramp up the production of critical goods, as well as set price controls, nationally. Organizations including the Party for Socialism and Liberation and at least 18 U.S. Senators have called upon President Trump to fully invoke the Defense Production Act.

A massive intervention is required to slow the spread of this pandemic and reverse the disproportionate impact it is having on oppressed populations. To this end, the organizers of “PPE for the People” demand the following:

The state and federal governments must compel companies that otherwise prioritize their profits over societal wellbeing to produce critical goods: COVID–19 test kits, ventilators, protective equipment and medical equipment at cost to meet the urgent need.
Provide free testing for the whole population.
Free testing only works with free treatment. Healthcare must be provided for free for all.
All essential workers must be provided PPE, paid sick leave, and hazard pay.
Provide secure housing for all. Empty dwellings should be immediately seized to provide shelter for all people without housing.
Release massive numbers of incarcerated people including but not limited to those in pretrial detention, elderly and other at–risk prisoners, and ICE detainees.
Native reservations, Black, Latino and other oppressed communities must be guaranteed equal access to treatment.

Our collective goal is that this city, our communities and world WORK FOR EVERYONE. The goal is NOT a return to what was “normal” before the pandemic. We believe that this crisis gives us the opportunity and moral imperative to change the persistent injustice and inequities exposed by this pandemic. This is, as theologian and Co–Chair of the Poor People’s Campaign Liz Theoharis has pointed out, “a call to come together in new ways in order to survive, hold the powerful responsible for their unjust policies and the lies they’ve told to cover up injustice, and rebuild on foundations of love and justice” (Sojourners Newsletter). PPE for the People will be a local outlet for community and solidarity, and a step on the path towards a total transformation of our society.

For more information, follow the SETC and PSL on social media. Facebook: facebook.com/pslboston; Instagram: @southendtechnology center, @bostonpsl; Twitter: @zackboston.

Thursday nights there's an Community Open Mike called Art Is Life, where people can make announcements, and do short sets of poetry reading, etc. Featured artist follows. People can purchase food at the café and eat while watching the artists.

Before the open mike, groups can meet. The café is still open. Groups wanting to increase visibility and/or offer workshops to help the community, have given workshops/lectures there.

Boston Globe Article

By Megan McKee
Globe Correspondent / June 10, 2010

Hair salons, pet groomers, and veterinarians in Waltham, Lexington, Acton, and Sherborn have joined a nationwide effort to collect hair and fur clippings for use in natural–fiber oil booms, which are being assembled by hundreds of volunteers in an effort to stem the environmental damage from the massive British Petroleum oil spill in the Gulf of Mexico.

“People are surprised about the concept,” said Marlene Maffei–Ryan, owner of the As You Like It Hair Salon in Acton. However, she said, once people understand the idea, they’re excited about it. Some clients have even had more hair cut off than they originally intended after hearing where the clippings were headed, she said.

“It’s been great. We don’t do anything with the hair anyhow. We bag it and trash it . . . It’s a good cause and it’s easy work for us,” she said.

The effort, which has brought in 570 businesses across Massachusetts, is being mounted by the group Matter of Trust on a website devoted to reducing the carbon imprint of dogs. The group is collecting clippings from salons, groomers, alpaca and llama farmers, individuals, veterinarians, and pet owners. The organization’s president, Lisa Craig Gautier, said she is receiving thousands of e–mails per day, and most are from those wishing to donate.

The organization sends out e–mails with addresses of warehouses where the donors should send clippings. Once there, volunteers stuff them into nylon stockings and tie off the ends. Then they're ready for deployment.

Craig Gauthier said BP has decided not to use natural–fiber booms in its cleanup effort but rather rely on synthetic booms. But harbormasters in Florida have announced they will use the booms, Craig Gauthier said, and Matter of Trust is hoping the response to its campaign will help change the BP approach.

The organization has about 10 miles of boom ready to go.

"We don't have anything against synthetic boom, but you have to drill oil to make it," said Craig Gautier. "This is a renewable resource that we're diverting from a landfill."

Locally, Waltham's Veterinary and Emergency Center of New England is one of the entities participating in the effort.

"We're always shaving areas" on their animal patients for medical procedures, said Sharon Gately, spokeswoman for the center, "and it usually just goes to waste. I just thought it was such a good idea."

Gately said the Waltham animal hospital also will have a bin out front to collect nylons; Craig Gautier said Hooters just donated 100,000 pairs.

At Lexington's Blue salon, desk manager Michael Surette said the salon has already made four shipments thanks to the trashbag–size amount of clippings that are disposed of daily.

A neighbor of the salon has volunteered to collect and mail the bags of donated hair.

In Sherborn, Serena's Groom Room is doing warm–weather shave–downs for pets, which means it is an opportune time to participate in the program, said owner Serena Keating.

"I think this is a really cool way for us being able to help a really bad situation," said Keating. "This is a little more global for us. . . It's something indirectly all of my customers have done a lot to help."

In the meantime, Matter of Trust is using social media websites to round up volunteers in places like Alabama and Florida to stuff pantyhose with clippings, and the group is urging people to contact the government to press for the booms to be used.

The organization was founded in 1998 by Craig Gautier and her husband, Patrice Oliver Gautier, an executive at Apple Inc., and is involved in multiple efforts to promote the reuse of materials, both natural and manmade. The organization has made mats from hair clippings to clean up oil spills since 2000.

Craig Gautier is hoping her organization's talks with BP and the federal government, as well as the the goodwill of tens of thousands of businesses and hundreds of thousands of individuals who are donating, will turn the tide at the oil company.

"We absolutely can put these booms in the water," she said. "It's really up to the people of North America to decide.

J.V. Fletcher Library (near basement elevators)
Nabnasset Elementary Coldwell Banker (Boston Rd.)

Full UP TO DATE list of items accepted and preparation instructions:

http://westfordfarmersmarket.com/documents/UpcycleIt.pdf

The following list was uploaded in October 2010. Check the link above for an UP TO DATE LIST.

Drink Pouches:
ANY brand of drink pouch and their straw!
Capri Sun
Kool Aid
Honest Kids
Prep:
1) empty as much liquid as you can
2) cut off top, just above where straw goes
3) rinse and dry

Elmer's Glue:
ANY brand of glue bottle/stick/pen. Glitter glue too.
Prep: Clean as best you can, but don't worry too much. Leave cap ON.

Energy Bars
ANY brand of energy, granola, cereal bar or Rice Krispie Treat.
No more Pop Tart Wrappers.
Prep: empty crumbs

Chip Bags
ANY empty chip/snack bags, large and small sizes,
Examples:
All Frito Lay products Pita chips
Quaker rice cakes Tostitos
Pretzels Pirate Booty
Doritos Smart Food
Lays Fritos
Cheetos SunChips
Kame Rice crackers Cracker Jacks
Prep: empty crumbs

Cookie Wrappers
ANY brand of cookie wrappers – no plastic trays
Examples:
Fig Newtons Oreos
Chips Ahoy Vienna Fingers
Chips Deluxe 100 calorie snack packs
Animal crackers (Stauffer's)
Prep:
1) Empty crumbs
2) Empty plastic trays

Candy Wrappers
ANY brand or size of candy wrappers
Examples:
Hershey's
Hershey's Flipz
chocolate chip bags
Starburst, Tootsie roll, dum dum lollipop

Oral Care Products
ANY brand of tooth paste tubes, toothbrushes, denture cleaner/adhesive and any plastic packaging (no cardboard)
Prep: Please place the toothbrushes in a separate bag.

Coffee Bags
ANY brand of coffee bag – the ones with silver lining

Writing Instruments:
ANY brand of pen, mechanical pencil, marker, highlighter, dry erase marker, Sharpie, Crayola Twistables etc. – no wooden pencils

Corks:
ANY cork from wine or champagne, natural or synthetic

Energy Barn Raising (free/donation requested energy saving retrofitting)

Volunteer Camp · Open

Worcester, MA
Web www.worcesterroots.org/projects–and–programs/worcester–energy–barnraisers
Service Temporary

The Worcester Energy Barnraisers strive to promote environmental sustainability as well as social and economic justice though collaborative home energy efficiency projects. We organize energy barn–raisings which empower and inspire diverse groups of people to take energy conservation into their own hands. Through barn–raisings, volunteers have the opportunity to learn valuable, replicable skills from team leaders that they can use to gain experience for green collar jobs, and apply at home to trim down energy consumption and heating bills while simultaneously reducing our collective carbon footprint. We are translating the negative effects of climate change into inclusive community solutions that are accessible to everyone.

as of June 2014:
The super officially [Occupy Boston calendar is here], look to the right of the page after you click on the link, but don't neglect to check out those below here because there is a LOT more "unofficial" stuff going on http://www.occupyboston.org/

[Rule 19's FANTASTIC calendar], perhaps the best one in the state for EVERYTHING...it's not specific to any one venue or group. GET ON IT! The corresponding email list (which doesn't always have everything on this calendar, by the way), but the email list "to be on" is the Act–MA.org list. Thanks to PF Soto for keeping this calendar stuff to the gils with great stuff to do! http://www.rule19.org/

[Encuentro 5's calendar] is primarily stuff at that location or that the org is co–sponsoring, but still great. That page also has other calendars to check out. We can't keep up with them, so make sure you do! http://www.encuentro5.org/home/calendar

[Jobs With Justice] workers rights calendar http://massjwj.net/event

[350MA.org's calendar] if you're interested in divestment from fossil fuel, their main gig right now, and protesting fossil fuel use. If you are interested in other environmental stuff that may not be on their calendar, try PetitionersCommandRespect@gmail.com, for things like Rights–based–ordinances, Western MA pipeline resistance, etc. http://350ma.org/calendar/

[Democracy Center] calendar of lectures, concerts, meetings, etc http://www.democracycenter.org/calendar–of–events/

[Community Church of Boston] calendar of lectures, workshops, meetings, etc http://www.communitychurchofboston.org/home/?page_id=14

[Lucy Parsons Bookshop] calendar of lectures, workshops, meetings, etc GREAT vegan potluck...CHECK IT OUT! http://lucyparsons.org/calendar.php

Protect Our Cape Cod Water Aquifer (POCCA) advocacy, education, action

Info/Hotline · Open

MA
Web poccacapecod.org
Service Temporary

from the website:

POCCA was founded in July 2013 in response to growing concerns about water quality on Cape Cod. The Cape Cod Commission's Regional Wastewater Management Plan points out that all the towns of Cape Cod share a water table, and many of the Cape's watersheds straddle more than one town. In other words, waste–water and drinking water problems are a Cape–wide issue, not an issue each town can solve on its own. Several local towns experienced voter rejection of well–planned water infrastructure projects which were deemed unaffordable at the municipal level. We have to work together on a regional level to solve these problems.
POCCA was formed to help disseminate information and help educate the public about the growing problems and possible solutions regarding water management, as well as lobby for tighter controls over pesticide, herbicide and fertilizer use on Cape Cod.

POCCA'S most pressing issue is to prevent NSTAR from spraying herbicidal applications on Cape Cod's power lines. To see how you can help, please visit the POCCA NSTAR page.

Our Unique Landscape
Cape Cod's landscape is unique—a fragile sandbar jutting far out to sea, surrounded by salt water and with an abundance of ponds, estuaries and bays but no major rivers or reservoirs. Our water is drawn from one source—from the ground, from the single aquifer that we all share. Each town on the Cape—even Provincetown, which has no potable water of its own and get its water from Truro—pumps its water from the ground. So no town is immune to potential water contamination.
The Cape Cod Commission's Regional Wastewater Management Plan http://www.capecodcommission.org features maps showing the cross–boundary watersheds, as well as the degree of concern for each of the 14 towns on the Cape. As one would expect, there is greater concern in the Upper Cape, in the built–up areas of Falmouth and Hyannis, than in the Outer Cape towns where much of the land is protected by the Cape Cod National Seashore.

Let's do all we can to protect Cape Cod's drinking water!

Natural step forward for Provincetown municipal lawns—
Provincetown hires a Non–Toxic Consultant.
POCCA encourages all other Cape towns to adopt the same practices as Provincetown.

From the website:

One–half day of volunteer help is traded for food and accommodation, with no money exchanged. The WWOOF–USA Host Farm Directory lists more than one–thousand organic farms (not necessarily USDA certified organic) and gardens across the country. The Host Farm profile contains information about the location, general responsibilities, and lifestyle of the host. Any farm, community, or garden project in the US that is willing to host and accommodate volunteers can participate in our program. We encourage all types of volunteers and hosts who can cooperate to strengthen sustainable agriculture worldwide to be a part of WWOOF–USA. The program is open to anyone 18 years of age or older, regardless of experience.

WWOOF farms offer a variety of educational opportunities, including growing vegetables, keeping bees, building straw bale houses, working with animals, making wine, and much more. With over a thousand farms in all 50 states, the US Virgin Islands and Puerto Rico, there is something for everyone. You can preview the Directory of Farms before becoming a member on this website.

Flower CSAHow it works

A WWOOF member contacts the Host Farms to discuss hopes and expectations to form an agreeable arrangement. WWOOFing is a way to learn practical farming skills, be part of the organic agriculture movement, and experience the heart of American agrarian culture.

Once you become a WWOOFer by joining the organization, you will receive online access to the Directory of Host Farms. You can choose to also receive a printed and bound Directory of Host Farms mailed to you. Next, contact the farms you are interested in visiting to check availability and arrange a stay. WWOOFers generally volunteer for half a day in exchange for meals, accommodation, and education. The length of a farm stay is determined by you and the host, and can vary from a few days to a season. The key to a mutually beneficial experience is lots of clear and open discussion about hopes and expectations before arriving at the farm– we recommend using the telephone to have a conversation.

WHY WWOOF?

WWOOF offers a rare opportunity for people to share their knowledge and efforts with others from a variety of backgrounds. It relies on trust, respect, and hard work. Read below to determine if WWOOF is right for you.
Hosts welcome willing WWOOFers onto their property to help get work done with the intention of sharing knowledge and meeting new people while growing food for local communities.

Being a WWOOF host may be right if you:
* will provide a safe, comfortable, and welcoming environment for a volunteer
* are participating in organic or sustainable activities
* have projects and tasks that you could use help with
* are interested in sharing your knowledge and daily life with volunteers

One–half day's work on a farm by a WWOOFer is exchanged for food and accommodation from the Host. Your trade agreement can be defined any number of ways: Work hours, days, length of stay, meal arrangements and accommodations vary greatly, and it is each host's and volunteer's joint responsibility to form a clear agreement.

Being a WWOOFer may be appropriate if you:
* are a respectful and courteous guest in the homes and on the lands of others
* are interested in learning about sustainable and organic farming methods
* are willing to work hard on projects and tasks presented to you

Have questions? Try reading the FAQs or feel free to contact us directly at info @ wwoofusa.org. We are available in the office from 9 to 5, Monday through Friday: 949–715–9500

Oil Spill in Great Lakes
On heels of Enbrige oil disaster, new oil spill discovered in Great Lakes off coast of Michigan.
10-06-2010
http://www.nwf.org/News-and-Magazines/Media-Center/News-by-Topic/Wildlife/2010/10-06-10-Oil-Spill-in-Lake-Huron.aspx

Yet another oil spill has been discovered in the state of Michigan, this time affecting the Great Lakes.

On Tuesday, October 5, state and federal officials received complaints from concerned members of the public that parts of a Lake Huron had toxic oil coating the shoreline of the Cheboygan State Park and sheen within the waters of Duncan Bay. This Northern Michigan coastline is home to several threaten wildlife and plant species, some of which include the rare Black Tern, Pitcher's thistle, and Dwarf Lake Iris.

Noam Chomsky Announces Solidarity With #occupywallstreet

Published 2011-09-26 10:57:09 UTC by OccupyWallSt

Anyone with eyes open knows that the gangsterism of Wall Street -- financial institutions generally -- has caused severe damage to the people of the United States (and the world). And should also know that it has been doing so increasingly for over 30 years, as their power in the economy has radically increased, and with it their political power. That has set in motion a vicious cycle that has concentrated immense wealth, and with it political power, in a tiny sector of the population, a fraction of 1%, while the rest increasingly become what is sometimes called "a precariat" -- seeking to survive in a precarious existence. They also carry out these ugly activities with almost complete impunity -- not only too big to fail, but also "too big to jail."

The courageous and honorable protests underway in Wall Street should serve to bring this calamity to public attention, and to lead to dedicated efforts to overcome it and set the society on a more healthy course.

Noam Chomsky

Please call:
Mayor Bloomberg: +1 (212) 639-9675 or +1 (212) 788-2958
Deputy Commissioner of Public Information: +1 (646) 610-6700
NYPD Switchboard: +1 (646) 610-5000
First precinct: +1 (212) 334-0611

Make our voice heard. Make sure that the world knows that everyone deserves equal protection, service, and punishment.

Remain true to our principles of non-violence.

A Message from Occupied Wall Street (Day Nine)

Published 2011-09-26 08:03:45 UTC by OccupyWallSt

This is the ninth communiqué from the 99 percent. We are occupying Wall Street. The police barricades that have been surrounding the Stock Exchange help.

Sunday has been decreed, once again, a day of rest. We didn't march. We have made a new world, a new city within the city. We are working on a new sky for where the towers are now.

Throughout the day our sisters and brothers arrested yesterday came back home to Liberty Plaza. They greeted the new faces that have joined us here. They shared their stories of imprisonment, of medical care denied and delayed. We welcomed them and listened.

March Guidelines

Published 2011-09-25 04:23:55 UTC by OccupyWallSt

1. Stay together and KEEP MOVING!
2. Don't instigate cops or pedestrians with physical violence.
3. Use basic hand signals.
4. Empowered pace keeps at the front, back and middle of every march. These folks are empowered to make directional decisions and guide the march.
5. We respect diversity of tactics, but consider how our actions may affect the entire group.

from their website:

Give your old computer new lifeSM

Donate it to Project PCReNew!

Give someone the tools to be computer literate today.

We will repair and upgrade your donated machine. As a Microsoft Authorized Refurbisher we wipe the hard drive using software designed to Department of Defense standards to protect from identity theft. A new Windows operating system is installed. The refurbished computer is then given to an individual or organization who cannot afford their own computer. A student, senior citizen or organization in the Rockland County Area.

You receive a letter of donation to use for a charitable tax donation. You also receive the satisfaction of knowing your donation will be given a second life and put to good use, not just thrown in the trash. Your old computer will be given new life and help to bring someone electronically into the 21st century. It will help them live for today and prepare for tomorrow.

PCRENEW is one of the first MAR's (Microsoft Authorized Refurbisher) appointed in the United States. Our participation in this program allows us to purchase legal Microsoft Windows operating system software at very preferred pricing for each refurbished computer. Recently, the MAR program has been changed to the MRR program (Microsoft Registered Refurbisher).

We are a Partner with National Cristina. Check their website www.cristina.org

Service Temporary

Free Geek is a 501(c)(3) organization with a mission to sustainably reuse technology, enable digital access, and provide education to create a community that empowers people to realize their potential.

Computers help us in many ways, but the move toward a digital future isn't without its share of hurdles. Many individuals lack the resources necessary to purchase a computer or get the training required to use digital technology. At the same time, the rapid pace of technology consumption and turnover means that over 2 million tons of hazardous e-waste is created each year in the United States. Free Geek's goal is to divert technology that would otherwise be recycled or thrown away, refurbish it, and give it back to our community at no or low cost.

For decades Kettleman City residents have fought Chemical Waste Management over proposed expansions of its landfill. The dispute has included charges of environmental racism and repeated concerns that the toxic dump is causing health problems.

Now, people suspect chemical waste is to blame for the recent spike in birth defects. Five area babies born in a 15-month period in 2007 and 2008 suffered severe birth defects, including cleft palate, heart problems and developmental delays.

OREGON SPECIFIC INFO:

Sites in Oregon

DHS's Environmental Health Assessment Program (EHAP) works at the request of concerned individuals and organizations to assess and prevent human exposure to contamination at Oregon sites listed on the National Priority List (or Superfund sites) and at other hazardous waste sites that impact communities. Click location on the image map below for more details or browse the overview.

http://www.oregon.gov/DHS/ph/ehap/sites.shtml

===

Voluntary Cleanup Program
DEQ created its Voluntary Cleanup Program (VCP) to provide oversight to property owners and others wishing to investigate and clean up hazardous substance sites in a voluntary, cooperative manner. The goal of the program is to increase the number of re-mediated sites by streamlining the cleanup process while ensuring compliance with Oregon environmental regulations. Projects range from simple sites with a limited amount of contaminated soil to complex sites with multiple contaminants in soil, groundwater, surface water, sediment, and/or air. The Voluntary Cleanup Program offers two options for cleaning up contaminated sites, the Independent Cleanup Pathway and the Voluntary Cleanup Pathway.

http://www.deq.state.or.us/lq/cu/voluntarycu.htm

===

PORTLAND HARBOR –
http://www.deq.state.or.us/lq/cu/nwr/PortlandHarbor/index.htm

Portland Harbor is a heavily industrialized stretch of the Willamette River north of downtown Portland, Oregon, that was listed on the National Priorities List ("Superfund") in December 2000. Sediments in the river are contaminated with various toxic compounds, including metals, polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), chlorinated pesticides and dioxin. Levels of these pollutants in the river appear to be highest near contaminated sites that sit adjacent to the river on the shore (often referred to as "upland" sites).

SEE ABOVE WEBSITE FOR MORE INFORMATION!

--

http://www.deq.state.or.us/lq/cu/nwr/PortlandHarbor/docs/PortlandHarborMap.pdf

This is a map of sites in Portland Harbor that are adjacent to the river, called "upland" sites, that DEQ is working to clean up. You can click on the name of each site to see specific information about contaminants and the status of cleanup work.

EMERGENCY FLOOD APPEAL
SUPPORT TO FAMILIES AFFECTED BY THE CATASTOPHIC
FLOODS IN PAKISTAN

After a year wrought with conflict which led to the displacement of approximately 2.2 million people, Pakistan has now been hit with the worst floods in 80 years. The unprecedented flooding has been caused by very heavy Monsoon rains, and has affected all parts of the country. With the death toll rising everyday it has not been possible to get an accurate estimate of the individuals affected by the floods but conservative estimates put the number at 6 million, with over 1,800 deaths.
The floods have destroyed homes, inundated crops, killed livestock, washed away communication links and led to a scare of a health catastrophe. With further rains forecasted for the coming weeks, the dams full to capacity and the relief agencies stretched to their limits it is time for Pakistanis and for our friends all over the world to help these people – who have been the continuous victims of strife and hardship.

from the website

About BeStrawFree.org

When fourth–grader Milo Cress learned that over 500 million straws are used every day in the US, he decided to stop using straws, and to begin an online project where others could join in to do the same.

This project approaches the issue in two ways: Reduce and Reuse.

For those people who prefer or need to use straws, Reusable Straws are often a good option. We realize it is not realistic for everyone to stop using straws completely.

The more straws we choose not to use, however, the better for us all.

Each time we choose not to use a throw–away straw we are helping reduce the amount of waste going into landfills and littering our oceans, lakes, rivers, and countryside.

– May 5th, 2011: Milo met with Mayor Bob Kiss, of Burlington, VT to discuss how the two can work together to make Burlington the first city in the US where it may become standard that restaurant staff offer cutomers a straw rather than putting a straw in every drink.
It's an "Offer–first" policy.

The Mayor presented Milo a formal Proclamation that offically recognizes this as a Best Practice in the City of Burlington.
This is an important milestone toward making Burlington, VT the
"First StrawFree City in America!"

– Earth Day, 2011: NECN News Broadcast and
National Restaurant Association Press Release !

– April: National Restaurant Association Recognizes Milo!

Milo is recognized by the National Restaurant Association for his suggestion that restaurants offer straws to patrons instead of putting a straw in every drink:
Chris Moyer, the Program Manager of the Conserve Initiative (of the National Restaurant Association) said, "I could not agree more with Milo that offering straws to guests instead of automatically giving them one is a quick and easy way restaurants can help reduce waste and conserve natural resources, as well as save money on supply purchases."

Clean the World (Soap Donor/Recycler)

Donor · Open

Recycling
Web www.cleantheworld.org
Service Temporary

from the website:

Process

Clean the World implements its mission through: (i) collecting, sorting and processing discarded soap, shampoo and lotion product donations from participating hospitality partners; (ii) recycling these product donations at its facilities in Orlando, Florida; and (iii) delivering these recycled product donations to domestic homeless shelters and impoverished countries suffering from high death rates due to acute respiratory infection and diarrheal disease.

Since its inception, Clean the World has been steadily increasing its services and operations to accommodate rapidly expanding community needs, awareness and donations, and has accepted in–kind donations of more than $150,000. In the process, Clean the World has put over 21,000 soap bars and 50 gallons of shampoo and conditioner back into human use, simultaneously eliminating over 4 tons of waste.

Clean the World is supported by through hospitality partnership program fees, sales of recycled product donations and monetary charitable contributions received from supporting individuals and organizations worldwide.

As of July 2009, Clean the World had 13 total employees and 9 total volunteers. Clean the World's volunteers have donated approximately 400 cumulative hours of service to our cause, the majority of them enhancing employment marketability through on–the–job experience and extensive training.

Recycling Operations

How do we do it?

First we work with our Hospitality Partners to educate their staff on the soap and shampoo Recycling Program. We provide bins which housekeeping staff uses to deposits collected soap. Pick up the bins weekly. We provide online training videos, housekeeping instruction posters, and collection bags.

The soap is taken to our Soap Recycling plant. We use two Recycling Methods: Re–batching and Sterilization

About Re–batching

Re–batching applied to 30% moderately to heavily used bars. Soap is cooked to remove all impurities. Soap is re–formed into 2 ounce bars

About sterilization

Our proprietary sterilization process is applied to 70% of the slightly used bars. The soap soaks in a sterilization solution and is then treated with a steam/pressure combination.

CTW test the soap's pH level and cools it for packaging.

Does it work?

Tri–Tech Laboratories tested our recycling process. They provided infected soap which we ran through the process. Tri–Tech then tested it for sterilization. They found that our process completely eliminated the pathogens (Listeria monocytogenes, Escherichia coli, Pseudomonas aerogenes, Salmonella typhymurium, Staphylococcus aureus)

Eco-Living: Alternative/Sustainable Living Communities/Networks

Info/Hotline · Open

Sustainable Development
Web www.eco-living.net/resourcedb/staticdb/community.html
Service Temporary

from above website. see website for live links.

* Acorn Community – a cooperative, secular, intentional community located in central Virginia, "...working toward a diverse egalitarian society that embraces feminism, ecological sustainability, multiculturalism, diverse sexual and gender orientations, and personal spiritual growth."
* Alpha Farm – an intentional community in rural western Oregon, composed of "people who have chosen to live and work together to share a more harmonious way of living." Reflects Quaker values such as consensus decision-making, land stewardship, simple living and the like.
* Ash Grove Community Farm – in Corning, New York, with intent to "...provide a model of sustainable agriculture and intentional community lifestyle." Includes a CSA, dairy goat herd, apprenticeships, events and workshops, and various visitor and resident possibilities.
* Blue Heron Farm – "a community of people who have purchased 64 acres of field and woodlands to share, protect, use and enjoy together in the central Piedmont area of North Carolina." Includes member info and photos, a non-profit educational association, a bit of history of the land and buildings, info on their alternative wastewater treatment system and more.
* Crossroads Medieval Village – in Australia, owned by a co-operative, aiming to re-create a medieval village and castle and its surrounds of farmland, forest and hamlets...with a difference, as they are using Permaculture as their basis for forest, agriculture and other support systems design.
* Dancing Rabbit Ecovillage – "...an ecovillage in progress on 280 acres of beautiful northeastern Missouri rolling hills." Dancing Rabbit folks are working with natural building methods, permaculture design, a vehicle co-op, bio-diesel fuel production, publishing a newsletter and more – most of which is detailed (including pictures) on-line.
* Deer Rock Community – in Virgina, in the process of re-grouping after some initial startup complications. This site has some useful sample documents, such as a membership agreement, bylaws, and vision statement, and also a valuable narrative showing some of the complexities of a process such as forming an intentional community.
* Dreamtime Village – near West Lima, Wisconsin, "...an experiment in ecovillage design whose mission is to create new

planetary culture...Our challenge is to design a landscape where we can create art that is functional, alive, & fantasmagorical while simultaneously serving as an eco–village demonstration and a hands–on learning environment for people of all ages..."
* East Palo Alto Historical and Agricultural Society – A community–based, non–profit organization dedicated to preserving and enhancing the historical, agricultural, and cultural integrity of East Palo Alto, California, as a model of sustainable development. Good examples and samples of diversity– and sustainability–oriented community planning processes that are actually implemented or in the process of creation!
* East Wind Community – in the Ozark mountains of southern Missouri, "...a secular, egalitarian intentional community...to eventually serve as a model of a society that is free, democratic, cooperative and egalitarian; without violence and exploitation." Income–sharing, economically self–sustaining and in existence since 1973.
* Eddie's Nimbin page – one member's pages about Nimbin Rocks Cooperative near Nimbin in Australia. An individual story that offers insights into what might be involved in joining and living in such a community. Includes info on some "appropriate technolgy" projects he's working on.
* The Farm – Founded in 1971, committed to simple living and self–reliance – the Farm has pioneered a wide range of social and physical technologies for low–cost, high satisfaction community living.
* Findhorn Bay Community – yes, that Findhorn – an international community and developing eco–village of about 350 people in the northeast of Scotland. Founded in 1962 near the seaside village of Findhorn. See also Erraid, an island community with strong connections to Findhorn.
* Goose Creek Farm – an eco–village in the making in Casey County, south central Kentucky. Go to the latter part of the second page to see the info for prospective eco–village participants.
* Heathcote Intentional Community – an example of a community in process, based on Permaculture principles – information on the community itself, workshops offered, conference center facilities, visiting, joining, and the School of Living!
* Infinite Sun – Action towards sustainable urban living in Kansas City. Wide–ranging list of links, from activism to sustainability and probably even something starting with 'Z'.
* Kookaburra Park Eco–Village – an ongoing experiment in community currently being created in Australia. Land use is based on Permaculture principles.
* Los Angeles Eco–Village – a sustainable community in process and the west coast node for the Ecovillage Network of the Americas. Yes, it's really happening, and really working, and right in the middle of "El Lay" (as Joe Bob would say...). Urban community examples abound here. Check it out!
* Meadowdance – "...an egalitarian, child centered community that welcomes human diversity, ecological sensibility, mutual learning and joy." Located near Battleboro, in Southeastern Vermont, USA. In the process of formation since April 1977.
* Occidental Arts and Ecology Center – an intentional community and educational institute founded in 1994 by a group of biologists, artists, activists, educators and horticulturists. Striving to practice what they teach – practical approaches to the social, economic, environmental and spiritual challenges of our day – on a beautiful piece of land near Occidental in Sonoma county, California, USA.
* Sanctuary – a developing eco–village located in Northwest lower Michigan (U.S.A.). Notes on an Eco–village model, sustainable enterprises, contact and participation information, and community development assistance.
* Sirius Community – an example of an existing and evolving experiment in community, both physical and cultural. There is a green building apprentice program and well–developed internship positions as well.
* Sharingwood Cohousing community – in southern Snohomish county, Washington state, USA. An active, growing cohousing community. This site includes a document library as a resouce for others involved in community creation.
* Student Housing Cooperative at Michigan State – a large, participatory, land–trust–based student housing co–op based on Rochdale cooperative principles. Information on how the co–op grew, how it operates, and of course links to other co–op related sites!
* Twin Oaks Community – Established in 1967, located in rural central Virginia, based on cooperation, nonviolence, and equality. Income–sharing, self–governing, and partly self–sufficient. Communal income comes from a variety of cottage industries.
* Utopian EcoVillage Network – a forming ecovillage offering "tropical hilly geographical paradise in Ecuador...an intentional community with a self–sufficient goal, we seek people who have a strong desire to live communally." Mission statement and info on membership, goals, processes, intentions and other community details.
* Windward – an association of non–profits, including: the Windward Foundation, a non–profit corporation dedicated to developing, communicating and implementing the principles of self–reliance – finding ways to take their lives in positive directions and helping others do the same; and the Windward Center, providing support for individuals personally committed to the process of making a substantial life transition.
* ZEGG – the Center for Experimental Cultural Design, formed in 1991 in Germany; "...an experimental space for the creation of a new cultural model." Intentions include "...to explore and pass on the spiritual and practical knowledge for the building of a vivid, humane and nonviolent culture." Inspiration for the North American Network for a New Culture.
* Zen Center of Hawai'i – located on the pastoral outskirts of Waimea (Kamuela) on the Big Island of Hawai'i. The director and spiritual teacher is Robert Joshin Althouse, a Soto Zen Buddhist Priest who has also studied in the Tibetan Tantric tradition with Trungpa Rinpoche and Gyaltrul Rinpoche. The Center offers meditations, workshops, sesshins (retreats), and opportunities for bearing witness via community events and other aspects of "engaged Buddhism," including a community garden!

Information Resources [Here and Now | Information Resources]

* Bega EcoDevelopment Project Briefing Paper – a group in the Bega Valley in South East NSW, Australia, that has been meeting since April 1996 and exploring ways of creating more ecologically and economically sustainable human settlement. This

paper offers current results of their inquiries.
* Center for Sustainable Communities – in the Cascadia Bioregion (Pacific Northwest, North America). Resources such as case studies, a library, contact info and a tutorial on sustainability. The contact info ranges from local to global and covers a wide range of focuses.
* Community Coalition for Environmental Justice – comprised of representatives and residents of diverse communities of the greater Seattle region. Members are dedicated to bringing together all communities in an effort to address issues of disproportionate environmental risk in communities of the economically disadvantaged. 4759 15th Ave. NE, Seattle, WA 98105; (206) 527–1695.
* Community Currency – information, resources and events related to localized and community currency, barter and exchange systems.
* Creating Land Trusts – just like it says, all about creating land trusts, including history, examples, basic information, related organizations, books and other publications.
* Ecopsychology on–line – an e–magazine with quality information, articles, and essays on and about ecopsychology – theories, research, practices, and experiences. Also archives of past issues and links to additional resources.
* Eco–village Information Network. A service of the Global Eco–village Network – international site for the eco–village concept and movement. Check out their chock–full resources page for more relevant sites. This organization also provides the EcoBalance on–line discussion group.
* Hawai'i Nation – provides some perspectives on the restoration of the independence of Hawai`i, along with various cultural perspectives from her people. A rich site that goes well beyond the usual stereotypes of Hawai'i, with links to published articles, position papers, news items, histories, legal documents, political actions, and related sites.
* HopeDance – a grassroots, all–volunteer community magazine for the San Luis Obispo region on the central coast of California, USA. They "...publish material and engage in activities that are necessary in building an ecologically sustianable, holistic, healthy and awakened community."
* Impact Online – a nonprofit with a mission of facilitating and increasing community involvement. Major focus on coordinating volunteer organizations and opportunities by way of volunteer opportunity listings, nonprofit service and organization directories and information about volunteering.
* Intentional Communities – a resource and information site embracing a variety of ideas and forms for what some call "intentional communities." Who wants to live in community? Well, you already are...can you imagine an unintentional community? Is there such a thing? Think about it...
* Ka'u Landing – "An Independent Monthly Journal Dedicated to Community Collaboration and a Sustainable Future for the Islands of Hawai`i." Stuff on and about Hawai'i and the Big Island that you'll never hear about in mainland news media...now providing a monthly sampling of on–line articles, plus complete table of contents and advertiser index.
* LandTrust online discussion list – a listserv for individuals and groups interested in the topic of land trusts.
* Lux Intentional Communities Page – home base on the web for an intentional community project in Vermont, U.S.A. Also has pages with community–related links and a list of collected threads of online alternative energy discussions.
* MenWeb – M.E.N. Magazine – The Men's Evolvement Network site, with most all of the Seattle M.E.N. magazine content available for browsing. Also general information and links to further resources for Men's work, groups, organizations and the like.
* Network for a New Culture – a North American organization that "...seeks to build a sustainable, violence–free culture through exploring intimacy, personal growth, transparency, radical honesty, equality, compassion, sexual freedom, and the power of community." Originally inspired by the German community ZEGG. The site has a document library, discussion group and other resources and there are scheduled retreats and workshops, including an annual summer camp, in the non–virtual world.
* Northwest Intentional Communities Association – coordinating exchange of information and resources between Northwest intentional Communities and others; facilitating communication and networking between local, regional, and national intentional communities organizations. Portions of their newsletter are available online. There is a great collection of resources for potential and existing communities!
* Pomegranate Center – the mission of Pomegranate center is "to engage communities in creative experiments integrating a celebration of the arts, an appreciation of the natural environment and a thoughtful use of public resources." The center develops and offers skills and resources to help communities find a balance between economic, environmental, educational, social, community, and spiritual concerns.
* Sustainable Communities Network – addresses a broad range of issues and offers a broad range of resources "for those who want to help make their communities more livable." Sections on economy, resources, governance, lifestyle, case studies and much more.
* Syntropo – "An interactive on–line magazine dedicated to the global intentional community movement and the pioneers who are re–thinking human societies." Interactive discussions & glossary; postboard; book list; articles; etc. This is just getting started – go help it out!
* The Trust for Public Land – a national nonprofit "...working exclusively to protect land for human enjoyment and well–being." Lots of info on public land trusts, examples, resources, news bulletins and how you can help.
* VITA Village Technology Center and Catalog – "...introducing effective tools and techniques with particular emphasis on those items which increase agricultural productivity, improve housing, health and sanitation, and promote local industry in the developing areas of the world." Their catalog has "simple" technology items with descriptions and illustrations and a link to a page explaining their approach and philosophy.
* World Transformation web space – an eclectic site loaded with links. Go explore for yourself...

GoodGuide provides the world's largest and most reliable source of information on the health, environmental, and social impacts of the products in your home.

With GoodGuide, you can:

– Find safe, healthy and green products that protect you and your family
– Search or browse over 65,000 food, toys, personal care, & household products to see what's really beneath the label
– Use expert advice and recommendations on products to quickly learn the impacts of what you buy
– Find better products and make purchasing decisions based on what's important to you
– Create a personalized favorites list with the products that are right for you and your family
– Share your favorites list on Facebook or on your own website
– Get mobile advice when your are out shopping by downloading our iPhone app

GoodGuide gives you the best information available, wherever and whenever you need it most. We'll help you find better products that represent your values, avoid products that are harmful to your health, the environment, or society – and enable you to take actions to help improve the world.

The People Behind GoodGuide

One summer a few years ago, Dara O'Rourke was doing what he'd done dozens of times before: putting sunscreen on his five–year old daughter Minju before she went outside to play in the summer sun. The thought occurred to Dara, "I wonder what's really in this stuff?" So, being a Professor at the University of California–Berkeley, Dara researched the sunscreen. What he found was surprising and disturbing: the sunscreen he'd been putting on Minju for years had a toxic ingredient.

At that moment, Dara realized how little we know about the products we bring into our homes every day. He knew that other parents should have the same access to product information that he and his fellow researchers had. He also wanted to solve the problem of increasingly confusing marketing claims regarding whether products were actually healthy, safe or green.

So he brought together both academic and technology experts to create a world–class team of scientists, consumer researchers, technologists and industry professionals. From Google, Amazon, eBay, PayPal, and Intuit, to MIT and the University of California, we've developed a "For Benefit" startup at the forefront of integrating science and technology, working to fill a huge information gap in the marketplace.

Our team is dedicated to combining the best science and technology available, with what's most important to you. Our goal is to provide the most comprehensive, credible, and useful information in the world, on products and companies delivered whenever and wherever you need it. We're making information available and easy to use so each of us can express our own values and concerns in the marketplace.

GoodGuide is incorporated as a "for benefit" organization. This new organizational structure enables us to access the resources and expertise of for–profit enterprises, while maintaining a deep commitment to our social and environmental mission. At GoodGuide we're about more than just making money. We are a independent organization, dedicated to providing you with the best available information on products and companies. Our commitment to being socially, ethically, and environmentally responsible is written right into our "for benefit" charter.

http://www.goodguide.com/about/ratings

Ratings and Methodology

GoodGuide is building a comprehensive source of information on the environmental, social, and health performance of products and companies. The GoodGuide team works with a network of leading academic institutions, government data sources, non–governmental organizations, and private research firms to bring world–class information to consumers.

GoodGuide's scientists have collected data from around the world on chemical ingredients, products, brands, factories, companies, industrial sectors, and even countries. We gather the highest quality data available and convert this information into ratings that can be used by non–scientists to easily evaluate products and companies.

In the future, GoodGuide will have tools to let consumers screen this data through their own personal preferences, allowing them to "filter" and search for products and companies that match their specific values.

Service Temporary

A great piece of research showing the 100 largest food producers and which organic food companies they own. It also shows which companies have alliances with Cargill to produce "enhanced" foods...GMO (cancer! environmental devastation). It's not clear if they use these "enhanced foods" in their organic products. But the link is too close to comfort for this netizen.

Planet Aid (clothes re–use/textile recycling/low–price sale to development orgs)

Open Business* · Open

Web planetaid.org/who–we–are/about–us
Service Temporary

from the website:

Planet Aid is nonprofit organization that collects donated clothing and shoes to protect the environment and support sustainable development in impoverished communities around the world.
Planet Aid protects the environment and preserves our natural habitat by reducing the volume of textiles entering the solid waste stream, thereby saving on landfill space and reducing the emission of greenhouse gases.

* Planet Aid makes helping others easy and accessible by using donated clothing and shoes to drive economic development, improve the environment, and eliminate poverty in developing nations.
* Planet Aid is committed to building capacity by funding sustainable community development projects that address education, food security, health, hygiene, and the HIV/AIDS epidemic.
* By recycling used clothing and shoes, Planet Aid works to protect our environment by saving on landfill space and reducing the of emission green house gases.
* Planet Aid has a proven track record and an effective business model; our unique concept of aid delivery is supported by recycling unwanted clothing and shoes collected at more than 13,000 yellow donation bins nationwide.
* Since 1997, Planet Aid has supported more than 60 projects in 15 countries with more $69 million.
* Planet Aid is active in 20 states across the US and works to create partnerships with businesses, schools and other organizations on state and local levels.

NOTE: There's been some controversy with regard to this organization. Please be aware.

TF: Although this site is clumsy and also "strict" in its ratings, it's the best one I've seen. Note that you have to search for the specific brand and "product type" to find the ratings. It's hard to figure out what the ratings are, but the general rule is that if the pop up window's color is "green", then it's a good sign... if it's yellow or red, "beware". I checked out a bunch of products that I use and found their ratings to be in agreement with my own.

from the website:

Harnessing Innovation to Protect the Vulnerable

The Challenge

Relentless waves of compound global shocks – food, fuel, and financial – have revealed a wide information gap between the onset of a global crisis and the availability of actionable information for decision makers working to protect the world's poorest and most vulnerable populations. Traditional monitoring systems have been effective in tracking medium to longer–term development trends. Yet they were not designed to generate the type of real–time information decision makers need in developing timely actions to help vulnerable populations cope with fast–hitting, inter–connected crises. Much of the household–level data used to track progress toward the Millennium Development Goals (MDG), for example, dates back to 2008 or earlier – before the onset of the current economic crisis.

The recent series of crises has also shown that there is a real danger of losing hard–won development gains within a fraction of the time it took to achieve them. Finding out today how a community began coping with a crisis two years ago may be too late to prevent irreversible damage. The price a country pays for not knowing how its population is coping with shocks is increasing as the resilience of families is eroded, causing millions of households to lose ground in their struggle to escape poverty and driving many of those who had escaped back into destitution. In a climate of fiscal austerity, development investments need to be targeted where they are most needed and where they are likely to achieve the highest returns. While the private sector has been using real–time data to drive investment decisions for many years, development resources continue to be invested based on information that is often at least two years out of date. Decision makers at every level in both donor and developing countries need high–quality, actionable information and hard evidence to protect vulnerable populations.
An Opportunity

Yet even as the impacts of crises have reverberated around the world, our lives have changed in other ways as well. We live in a new information age, where the pace of technological innovation is accelerating at a breathtaking pace. As communities in the developing world increasingly adopt and use these technologies, they are beginning to generate ambient data as by–products of their everyday activities. This "information exhaust" may hold an important key to detecting early signals of emerging vulnerabilities or incipient harm. Mobile phones are now playing a critical role in global development and crisis response. Collaboration tools allow distributed teams to design, develop and share innovative solutions to problems from anywhere in the world. Social networking technologies offer the promise of new and agile forms of collective action. The explosion in the volume and diversity of data has been met by advances in methodologies to help make sense of it all, and new tools now exist to collect, filter, integrate, fuse, analyze, map and visualize information. These emerging technologies represent an extraordinary opportunity to close the information gap, to ensure that technology reaches the bottom of the pyramid, and to provide decision makers with new kinds of real–time information to protect the world's poorest and most vulnerable during global crises.
UN Global Pulse

Recognizing both the urgent need for more timely and actionable information and the unparalleled opportunities, the Secretary–General called on the UN system in April 2009 to establish a monitoring system (Global Pulse) to better track the impact of compound crises on vulnerable populations. He asked the Deputy Secretary–General to lead this effort and establish a small Team in his office to spearhead the project.

World leaders – from both developing and developed countries – have expressed their strong support for the Secretary–General's initiative. At the G20 Sum– mit in London last year, the heads of twenty of the most powerful economies re–affirmed the UN system's central role in tracking the wellbeing of vulnerable populations, calling on the United Nations "to establish an effective mechanism to monitor the impact of the crisis on the poorest and most vulnerable." The Global Pulse initiative is included in the UN Chief Executives Board's nine joint crisis initiatives, and forms part of the UN system's concerted effort to address the global economic crisis.
What will it do?

The Global Pulse initiative will work closely with Member States and other development partners to improve evidence–based decision–making and close the information gap between the onset of a global crisis and the availability of actionable information to protect the vulnerable. In doing so, the project will respond – at the highest strategic level – to two value propositions:

* Protecting countries against development reversals: In an age of increasing global volatility, hard–won develop– ment gains are in danger of being eroded much faster than in the past. Real time actionable information generated by Global Pulse will help

the international community to detect the impacts of a crisis on vulner– able populations early on when there is still time to prevent irreversible harm.
* Targeting development resources more effectively: In a climate of increasing fiscal austerity, decision mak– ers at every level face pressures on limited resources. Global Pulse will allow leaders to better plan and target interventions in times of crisis to ensure that those populations most at risk are the first to receive support.

Project Outcomes

At the project level, the Global Pulse initiative has been designed to contribute to four overall develop– ment outcomes:

* More timely and actionable hard evidence for global advocacy on the plight of the most vulnerable;
* Better global data to inform the design of more robust and agile safety nets for the world's most vulnerable populations;
* Strengthened regional networks for cross–border col– laboration and better understanding of shared regional risks and vulnerabilities;
* Strengthened national capacities to track population vulnerabilities to specific shocks and design targeted and timely policies to improve crisis resilience.

Project Outputs

Short–term

* Strong Global Pulse network built by linking together existing early warning systems and databases (Note: UN system alone runs over 39 early warning systems);
* Use of previously untapped, non–traditional data to detect anomalous behaviors that may indicate that a population is beginning to feel the impacts of a crisis or has exhausted its coping capacity;
* Reference architecture will allow the Global Pulse technology platform to plug into existing rapid data collection, analysis and collaboration tools;
* A global open–source volunteer community built (through innovation camps, competitions and on–line collaboration) to be able to constantly refine and further develop the Global Pulse technology;
* Five Pulse Labs established by the end of 2012 to build national capacities to leverage technology innovation to test new approaches to monitoring vulnerability at the country level.

Medium–to–long–term

* Reduction by order of magnitude in delay of availability of actionable information on household–level impacts and vulnerabilities;
* Free and open source technology platform for collaborative analysis and decision support;
* Strengthened national capacity for targeted policy interventions that leverage improved understanding of how specific populations cope with shocks;
* Strengthened national capacity to gather real–time information from areas that are traditionally difficult to capture, such as the informal sector.
* Thriving local communities of practice established around Pulse Labs where local technologists and social entrepreneurs collaborate with the public sector to create technology solutions for development;
* Development of an effective, efficient, rapid, scalable and sustainable model for catalyzing grassroots innova– tion for sustainable resilience to global crises.

How is Global Pulse funded?

Global Pulse is entirely funded through voluntary contributions from individual UN Member States and private philanthropic organizations. In particular, we would like to thank the UK and Swedish Governments for their financial support and the Rockefeller Foundation and Rockefeller Brothers Fund for hosting Global Pulse events at their thought–inspiring conference venues in Bellagio (Italy) and Pocantico Hills (USA). Global Pulse has also benefited from many hours of expertise generously invested in the project by many of its UN system partners, and UNDP, WFP, UNICEF and the UN's Department for Public Information (DPI) have seconded full–time staff members to the Global Pulse team. Given that Global Pulse is a multi–year project, we will continue to raise voluntary funding from a broad range of stakeholders over the coming months and years. We would welcome any expression of interest from donors interested in supporting the Global Pulse initiative.

from the site:

Cohousing communities are old–fashioned neighborhoods created with a little ingenuity. They bring together the value of private homes with the benefits of more sustainable living. That means common facilities and good connections with neighbors. All in all, they stand as innovative answers to today's environmental and social problems.

from the link above [see live links for the text below at the link above]:

"Indigenous Mutual Aid is an information and support network with an anti-colonial and anti-capitalist framework. We exist to inspire and empower autonomous Indigenous relief organizing in response to COVID-19.

We seek to grow the organizing of this effort into a collective hub of
organizers from throughout what we recognize as Turtle Island.

Indigenous Mutual Aid is an information and support network with an anti-colonial and anti-capitalist framework. We exist to inspire and empower autonomous Indigenous relief organizing in response to COVID-19.

We seek to grow the organizing of this effort into a collective hub of
organizers from throughout what we recognize as Turtle Island.
Please connect to our Slack channel (send an email to request an invite: indigenousmutualaid@protonmail.com) to connect, share, & build.

As our communities have a deep history with organizing to support each other in times of crisis, we already have many existing Mutual Aid models to draw from. This looks like a small crew coordinating their relatives or friends to chop wood and distribute to elders. It looks like traditional medicine herbal clinics or sexual health supply distribution. It looks like community water hauling efforts or large scale supply runs to ensure elders have enough to make it through harsh winters. Basically any time individuals and groups in our communities have taken direct action (not through politicians or indirect means) and supported others, not for their own self-interests but out of love for their people, this is what we call "mutual aid."
Our concept of mutual aid does not exclude our non-human relatives or the land. For more info on what Mutual Aid is (and isn't) please see "Let's Talk Mutual Aid" by Regan De Loggans. Check out our piece here and these too:
A Mutual Aid Explainer Video
Submedia's: What Is Mutual Aid?
Big Door Brigade: What is Mutual Aid

Check out our guide on How to Start an Indigenous Mutual Aid relief project.

This project is currently maintained by volunteers with Indigenous Action,
Táala Hooghan Infoshop, and Kinłani Mutual Aid based out of the
Southwestern region of the so-called "United States.""

InPowerMovement (reducing wireless emanations) (good privacy/terms policy!) (legal templates)

Info/Hotline · Open

Web inpowermovement.com/liability–action–document–templates
Service Temporary

This group helps people reduce the electrical emanations from utility meters. New "smart meters" are like a microwave oven running 24x7 in your basement. If you have gas, electric AND water meters...that's like 3 microwave ovens running all day/night. AND it sends emanations (dirty electricity) all over your house, via "noise" that can be harmful to health, heart/safety monitors, etc.

The group has given up asking utilities to help and is instead showing people how to invoke "administrative law" to impose liability on these utilities when they do not help a homeowner get rid of these meters. To do this, they suggest that you use the templates provided to give notice to the companies.

Check out their terms of service: https://inpowermovement.com/terms/

Their privacy policy reserves the right to change it without notification... so it's not perfect, but their terms of service seem to indicate their heart is in the right place!

"By using this Website, you consent to be of service to the highest good for yourself and for humanity, on all levels, with your service supporting a global emancipation of the human race from unnecessary and outdated systems of bondage and suppression."

Services offered: Advocacy, * (ANY/ALL Types); Advocacy, Environmental; Advocacy, Health & Human Rights; Advocacy, Human Rights; Advocacy, Privacy/Ethics, GOOD PRIVACY POLICY; Advocacy, Privacy/Ethics, GOOD PRIVACY POLICY, for advocacy groups; Advocacy, Reducing Impact of Wireless Emanations; Advocacy, Social Justice; Advocacy, Special Needs Folks; Assistance, Referrals, Legal Information & Resource Referrals (For Elders/Seniors); Demographic Served: Autism Spectrum; Demographic Served: Caregivers; Demographic Served: Critically Ill; Demographic Served: Disabled, Persons With Disabilities; Demographic Served: Homebound; Demographic Served: Low Income Folks; Demographic Served: Special Needs; Demographic Served: Sustainable Communities; Demographic Served: Vulnerable & Marginalized Populations; Documentation, Capitalism (the ruthless sort), Issues with & Solutions to; Information Resource * (ANY/ALL Types); Information Resource, Constitutional Rights; Information Resource, Environmental Education; Information Resource, Environmental Impacts; Information Resource, Legal Templates; Information Resource: Watchdogs, Environmental; New "business" models, Government; New "business" models, Sustainable Societies; Resource Website for "Green" (incl socially just) Products/Services; Resource Website for "Green" Living Suggestions; Services, Legal Assistance; Services: Legal Assistance for Disaster Survivors; Services, Legal Assistance (For Low–Income Families); Services, Legal, Community, Environmental Issues; Training, Legal; Training, Micro–Economic Entrepeneurship

Ohio, Cleveland We supply and install salvaged natural stone, sandstone, barnstone, bridgestone, and curbstone for landscape walls, stone walls, garden walls and retaining walls.
BRING Recycling
Oregon, Glenwood Salvaged materials are sold to the public. We can provide a wide range of deconstruction services, from completely dismantling structures to simply salvaging high value materials.
Gorge Rebuild–it Center
Oregon, Hood River Donate usable building materials. Avoid garbage fees, and get a tax deduction. Buy affordable building materials, and give them a second life.
The ReBuilding Center of Our United Villages
Oregon, Portland The ReBuilding Center plays an important role in reducing reusable materials from entering the waste stream.
Heartwood ReSources
Oregon, Roseburg More than just a store that sells reclaimed building materials, we provide professional contracting services for deconstruction and housing rehab for low–income residents.
The Barnwood Connection
Pennsylvania, Barto We offer a complete line of antique building materials reclaimed from old barns, homes, and other vintage structures of centuries past.
Construction Junction
Pennsylvania, Pittsburgh Construction Junction promotes conservation through the reuse of building materials. Pittsburgh’s non–profit building material reuse retailer.

Frank's Demolition Salvage
Pennsylvania, Woodlyn An expert demolition technician who collects & handpicks architectural antiques & other building materials from old and historic buildings & resells these materials.
Old House Salvage
South Carolina, Piedmont Architectural salvage is the store for all of your architectural needs.
Discount Home Warehouse
Texas, Dallas Discount Home Warehouse has been the go–to place for interior and exterior architectural salvage and home design finds.
Historic Houston Salvage Warehouse
Texas, Houston A non–profit organization dedicated to preserving Houston’s historic architectural and cultural resources. Runs a salvage warehouse.
Pieces of the Past
Texas, Johnson City Specializing in architectural antiques & salvaged doors, reclaimed lumber, and more for your home & garden.
ReNew Salvage
Vermont, Brattleboro A non–profit building materials reuse store. Our goal is to reduce the amount of construction waste, project surplus items, & usable items that end up in the landfill.
Architectural Salvage Warehouse
Vermont, Burlington We buy and sell antique building materials. We purchase salvage rights to buildings throughout New England.
ReCycle North
Vermont, Burlington ReCycle North is a non–profit organization in Burlington, Vermont with a 3–part mission of waste reduction, job–skills training and poverty relief.
Shiningwater Enterprises
Vermont, Lincoln Architectural salvage, dismantled buildings, salvaged timbers and architectural elements.
COVER Home Repair & Reuse Program
Vermont, White River Junction Our mission: To build community and foster hope through cooperation and fellowship among all home repair and reuse participants.
The Friendship HomeStore
Virginia, Harrisonburg We exist to help the construction industry reduce solid waste by diverting good materials from landfills back into other construction or remodeling projects.
Shenandoah Valley Reclaimed Lumber
Virginia, Harrisonburg We sell our reclaimed lumber, brick and stone to both the wholesale & retail market. We also offer demolition services for old houses and barns.
Black Dog Salvage
Virginia, Roanoke Specializes in reclaiming & renewing architectural antiques from the past including: salvaged mantles, doors, windows, stained glass, & more.
The Brass Knob
Washington, D.C. Specializes in architectural antiques and salvage for restorations and renovations, as well as new construction. Ideal for both commercial and residential projects.
Olympia Salvage
Washington, Olympia A non–profit organization whose mission is to promote environmental sustainability, to divert building materials from the waste stream, & to provide affordable alternatives
Waste Not, Want Not

Washington, Port Townsend A dynamic inventory of affordable quality used building materials. We offer the most practical of house parts; from the front door to tile for your floor & the kitchen sink.

Earthwise Architectural & Building Salvage

Washington, Seattle We purchase desirable, quality materials every day at our salvage warehouse from homeowners, architects, contractors, artists, designers and others.

Second Use

Washington, Seattle Second Use diverts tons of reusable materials from the waste stream and resells them at affordable prices to the public.

Oneida County Solid Waste Department

Wisconsin, Rhinelander Second Story is a building materials reuse project that will salvage used building materials, hardware furniture, appliances & other items in order to keep them out of landfills.

Demxx Deconstruction Inc.

Canada, Britist Columbia, Coombs Demolition and salvage company that specializes in hand demolition and the recycling and reuse of building materials.

Hudson Valley Historics
New York, Catskill Architectural salvage, building materials, recycling, collectibles, furniture.

This Old Toilet

California, Los Altos Salvaged toilets, toilet bowls, toilet tanks, toilet tank lids, covers, tops. 1915 to present. White & colors. New toilet seats & toilet bolt caps in many colors.

Skagit Building Salvage

Washington, Mt. Vernon At our retail yard and warehouse in Mt. Vernon, Washington we divert re–useable building materials from the waste stream and offer them to you at prices you will like. A buy–sell–trade location.

ReBuild Warehouse

Virginia, Springfield We are a nonprofit organization offering quality used building materials at discounted prices. Our profits will fund training programs for workers in "green collar" jobs.

Ameri–Source Services. LLC.

Pennsylvania, Bethel Park We offer: Architectural salvage, building materials, recycling, collectibles, furniture. Re–claimed materials, green building materials.

This Old Toilet

California, Los Altos Toilet tank lids, salvaged. All brands, white and colors. 1915 to current. Delivered to your door. The "Toilet Lid King" per the San Jose Mercury News.

The Barnwood Store

Pennsylvania, Cooperburg Reclaimed building stone, slate, brick and architectural salvage: doors windows iron hardware antique lumber & lumber products.

Recycled Building Materials – Online Marketplaces

PlanetReuse.com Website that connects buyers & sellers of reused & reclaimed construction materials & equipment from around the world and allows them to purchase products online.

Builder2builder.com Free online classified ads for used building materials. Where contractors, homeowners, architects & designers come to find & sell used building materials & architectural antiques.

The Architectural Machine The Green Building Resource Guide is a database of green building materials and products selected specifically for their usefulness to the design and building professions.

RE–USE Consulting

Washington, Bellingham We work on–line or travel to your location to provide training and on–site assistance or help building owners find alternatives to demolition.

DiggersList.com Buy or sell recycled, used and reclaimed building materials and supplies, tools, heavy and light–load vehicles, architectural salvage, appliances, flooring, windows and doors, and more!

Amighini Architectural

California, New Jersey Antique Salvage from Amighini Architectural. Over 500 architectural antique pieces from various periods and styles, imported from Europe dating from late 1800s to early 1900s.

Contractor Yard Sale
Classifieds Contractor Yard Sale is your online classifieds source for the advertising, buying, and selling of surplus building materials. Sell any salvaged or surplus materials.
Banco Roofing and Building Supply
Texas, Pasadena We offer brand new surplus and overstock building materials for up to 75% off retail.

Recycled Building Materials – Manufacturers

StrawJet
Oregon StrawJet has a unique process for the manufacture of structural building components from waste agricultural stalks.

Renew Resources Ltd
Canada, Ontario, Toronto We offer material made from recycled plastic. Our deck, plastic lumber and plastic pallet are made from 100% recycle plastic. Our Polyboard plastic sheet comes in 4'x8' size.
Recycled Building Materials – Resources & Tools

Jefferson Tool, LLC.
South Carolina, Charleston A tool to make nail extraction easy, "The Extractor."

Reconnx Incorporated
Location Not Available The Nail Kicker is a handheld pneumatic denailer or nail remover. It 'kicks' nails out of lumber instead of putting them in, without destroying the wood.

Recycled Building Materials – Associations, Consulting, Networks, Education ...

Building Materials Reuse Association
Pennsylvania, Pittsburgh The BMRA is a non–profit educational organization whose mission is to facilitate building deconstruction and the reuse/recycling of recovered building materials.

RE–USE Consulting
Washington, Bellingham We work on–line or travel to your location to provide training and on–site assistance or help building owners find alternatives to demolition.

Reuse Development Organization, Inc. (ReDO)
Maryland, Baltimore ReDo is providing education, training, and technical assistance to start up and operate reuse programs. ReDO is working to create a national reuse network and infrastructure.

from the website:

About LocalHarvest
LocalHarvest is America's #1 organic and local food website. We maintain a definitive and reliable "living" public nationwide directory of small farms, farmers markets, and other local food sources. Our search engine helps people find products from family farms, local sources of sustainably grown food, and encourages them to establish direct contact with small farms in their local area. Our online store helps small farms develop markets for some of their products beyond their local area.

Check out what our members are saying.

The richness, variety, and flavor of our communities, food systems, and diets is in jeopardy. The exclusive focus on economic efficiency has brought us low prices and convenience through large supermarkets chains, agribusiness and factory farms, while taking away many other aspects of our food lives, like our personal relation with our food and with the people who produce it. More and more people are realizing this and actively working to turn the tide and to preserve a food industry based on family–owned, small scale businesses. They are our best guarantee against a world of styrofoam–like long–shelf–life tomatoes and diets dictated from corporate boardrooms.

The Buy Local movement is quickly taking us beyond the promise of environmental responsibility that the organic movement delivered, and awakening the US to the importance of community, variety, humane treatment of farm animals, and social and environmental responsibility in regards to our food economy.

Who Are We?
LocalHarvest was founded in 1998, and is now the number one informational resource for the Buy Local movement and the top place on the Internet where people find information on direct marketing family farms. We now have more than 20000 members, and are growing by about 20 new members every day. Through our servers, our website and those of our partners serve about three and a half million page views per month to the public interested in buying food from family farms.

LocalHarvest is located in Santa Cruz, California, and was founded by Guillermo Payet, a software engineer and activist dedicated to generating positive social change through the Internet.

You Can Help
You can participate in our building process by encouraging your farmer, market manager, and restauranteur friends to visit localharvest.org and sign themselves up!

If you are a Sustainable Agriculture or Family Farming group, contact us to discuss how we can partner together in support of your work.

Coastal Response Research Center (CRRC) The Coastal Response Research Center (CRRC) at the University of New Hampshire (UNH) is focused on developing new approaches to spill response and restoration in marine and estuarine environments through research and synthesis of information. [leaves OR&R site]

––

http://www.darrp.noaa.gov/
DARRP is a NOAA multi–office effort involving the Damage Assessment Center, Office of General Counsel for Natural Resources, and Restoration Center. OR&R's Assessment and Restoration Division (ARD) is responsible for assessing the impact to NOAA trust resources from releases of oil and hazardous materials to achieve the goal of restoration. DAC staff determines what resources have been injured and lost to the public, and identifies resources that should be restored.

NOAA’s Oil Spill Response Effort in the Gulf of Mexico

As the nation’s leading scientific resource for oil spills, NOAA has been on the scene of the BP spill from the start, providing coordinated scientific weather and biological response services to federal, state and local organizations.

We have mobilized experts from across the agency to help contain the spreading oil spill and protect the Gulf of Mexico’s many marine mammals, sea turtles, fish, shellfish and other endangered marine life.

NOAA spill specialists are advising the U.S. Coast Guard on cleanup options as well as advising all affected federal, state and local partners on sensitive marine resources at risk in this area of the Gulf of Mexico. Additionally:

* NOAA is predicting the oil spill’s trajectory and the path of the layers of oil floating on the surface. OR&R experts are conducting aerial surveys to update trajectory maps and visually track the movement of the spill.
* NOAA’s National Weather Service is providing regular weather forecasts to a joint federal command center in Louisiana to facilitate operations planning and response efforts.
* Experienced marine mammal spotters from NOAA’s Southeast Fisheries Science Center are participating in surveillance flights flown by the Office of Marine and Aviation Operations to assess the species and populations that may come in contact with the spill.
* NOAA also is using experimental satellite data from our Satellite Analysis Branch to survey the extent of spill–related marine pollution.

As a major partner in the federal response to this evolving incident, NOAA will continue to provide the necessary coastal and marine expertise required for sound, timely decision–making and help protect the affected Gulf Coast communities and coastal marine environment.

Organic Foods on a Limited Budget

* The Dollar Stretcher, Bradenton FL, February 2009
Straight to the Source

Buying Organic Foods

Does anyone know how to save money on organic foods? I am very health conscious and have recently decided it was best for my two young daughters and me to make a real effort to eat foods without preservatives and hormones. Unfortunately, recent trips to local markets show how expensive it is to do just that. I had hoped Dollar Stretcher readers might have some advice on how to save money on organic/natural foods.
Jean K. in Boca Raton, FL

Grow Your Own Organic Produce

Try your local farmers' market, where you are likely to find organic items available for considerably less than what you pay in the grocery stores. Going to the farmers' market is a great habit to get into anyway, since you'll find wonderful fresh foods and you will help sustain local farmers.

In my area, the farmers' market is open year–round, and features many seasonal festivals spotlighting everything from strawberries to mudbugs (crawfish). Even when I lived in an area that required me to drive 25 minutes to the farmers' market, I found that the money I saved on the produce I bought to make my own salads (as opposed to spending $5.95 plus tax per salad per day at work) and the quality of the produce made the effort very cost–effective.

Farmers' markets are also a great way to teach kids about farming and what goes into producing the food they eat. You might also consider growing your own organic produce this spring. I once lived in a condo that had a balcony roughly the size of a refrigerator, yet I managed to grow cucumbers in hanging baskets, leaf lettuce in an old dishpan, loads of herbs, and cherry tomatoes and peppers in pots. Check your local library for books on container gardening, and ask friends if they might want to join in and split seed packages. This, too, is a great project in which to involve kids. My niece and nephew helped me plant all the seeds for my balcony garden, and then cheerfully raided the tomato and cucumber plants in our "air farm" (thus named because of the balcony location) at every visit.
Alicia

Join (or Start) an Organic Produce Co–op

A friend and I run one out of her living room. We buy from a produce wholesaler (the same one that delivers to the local health food stores). Watch for the trucks and look them up online. We have semi–annual meetings to decide what kinds of produce to order and how often. We have about 15 members who give us a standing order for every two weeks. If we have enough membership interest, we order a case of that particular produce, and when the produce comes, we sort it out. We use last time's produce boxes, and write everyone's names on them and sort into them, using the standing order each member has placed. It helps to have your members' standing orders be a range (i.e. 6–10 apples), because the cases aren't always the same quantities from week to week.

I use Excel to fill in everyone's bill (because we don't know the exact price until the produce comes with an invoice). We mark each item up only 10% (as opposed to the store's 40–50%), and the extra money gets split between those who sort that week, as a credit off of their bill. I require that every member put in a deposit, which I keep in a separate checking account, just for this co–op. Then, I'm able to write a check when the produce is delivered each produce day, and the members pay for their produce upon pickup, which replenishes the bank account.

I found members using my son's school newsletter and bulletin boards in schools and public buildings. Fifteen to twenty members is a good sized group, as everyone's boxes fit in my friend's living room for sorting, and it seems to be enough people to get full cases of most items we want. It does take a good bit of time organizing, but I think it's well worth it. Every once in a while, I check at the grocery store to compare to their organic prices, and I've saved about 30%. I'm getting organic produce and paying conventional prices, though I admit that for a sale–watcher, conventional produce would likely be cheaper. But the long–term benefits to my family's health make organics worth it to me. And we eat more fruits and veggies this way, because they are delivered on a regular basis, and I can do my meal planning around what's coming on produce day. And, I've gotten to meet some wonderful people that I otherwise wouldn't know.
Abbie in Michigan

Talk to the Farmers

If you go to green markets where you can actually discuss with farmers, try to find small farmers whose agricultural practices you agree with, but who may not have an organic certification and the price premium that goes with it. Certification is long and expensive, and many small producers won't take the trouble of getting certified, even if they use ecological farming practices.
Catherine in Montreal, Quebec, Canada

Stick to Whole Foods

My husband and I eat only organic food and these are the tips that help us save money:

· Stick primarily to unprocessed foods. The price of prepared organic food (dry cereals, frozen meals, crackers, etc.) is steep, but if you eat mostly whole foods (veggies, fruits, grains, beans, meats, etc.), you will save money. You may invest a little more in prep and cooking, but you will save money and be serving healthy foods to your family. And cook simply. If you are serving the best and freshest foods, they often don't need much adornment.

· Shop for fruits and veggies at you local farmers' market and strive to eat only in–season produce. You will get superior produce, support your local farmers and save money. You could also look into buying a share from a local farm. How this works is for a small fee per week you receive a box of fresh produce and, depending on the farm, fruit. You must usually commit to a season (typically March through October here) and pick up your box each week from a pick up location. You don't get to choose what you get though so you must learn how to be adventurous in the kitchen. For more information, Google "CSA farms." Some farms are organic and some are not, so make sure you know what you are getting.

· Check out your local natural food store. In the past, I have avoided shopping at mine because I figured that it would be more expensive than buying from the big supermarket down the street (economies of scale and all), but I was wrong. Their prices are cheaper and they carry a much larger selection of organic and natural foods than the big supermarkets.

· Try the bulk bins. Many regular supermarkets have started carrying bulk organic items and your natural food store will probably have an even better selection. Rice, pasta, oatmeal, nuts, etc. are all there and at rock bottom prices.

· Check out Trader Joes. If you can find what you are looking for, you will almost always get the best price here. Go with a list and stick to it. Trader Joes is temptation city and it is easy to pick a few extra items that look good and end up spending more than you budgeted for.

· Another place to get rock bottom prices is your local Costco or Sams Club. The big warehouse stores are carrying more and more organic products and you can often get a great deal. In our area, eggs, canned tomatoes, milk, dog food (yes, our dog even eats organic food!) and environmentally friendly laundry soap are cheaper here than anywhere else.

· If you have the time, space, and desire, grow your own. Even a row of green beans or a couple of cherry tomato plants on your balcony can provide a lot of food for just a few dollar investment in a packet of seeds. If you can't find organic seed in your area, just look on the Internet and you will find plenty of companies who sell at least some organic seed. You can also check out many great organic gardening books at your local library or check the Internet of organic growing tips.

· Look into joining a natural food co–op in your area. Members take advantage of the idea of bulk buying to get better prices on items. Google "food co–ops" for more information.

Chris

Go Direct

Try to link up with local farmers who grow organic food and buy directly from them. They are often families who are trying to get by just like you are and would be happy to help out like–minded folks, maybe even bartering for your purchases. The organic items you buy in the store cost more because of the packaging, shipping and so on. If you can buy local, you avoid all that unnecessary cost.
A

Find a Local CSA

Try to join a food co–operative or buy a "share" of a farm through community supported agriculture (CSA). You get delicious, healthy, organic food at a reasonable cost and help local farmers as well! Find a local CSA at www.localharvest.org/csa/
Denise

Shop Online

eBay has many sellers who offer organic. http://www.netrition.com/ is another invaluable source. I suggest Googling whatever product you're searching for (no dairy or perishable products of course) to find your best price. Also if you have a Whole Foods store nearby, I can't recommend them too highly. My youngest daughter lives near one (about two hours from me) and when I visit her, I buy milk. A gallon of organic milk often costs less than a gallon of hormone–laced milk does at Wal–Mart!

Jayne

Make Wise Choices

Sprouting seeds is a fun and economical way to stretch your organic budget. Seed sprouting kits range widely in price or you can make one from easily available items. There are wonderful websites devoted to the subject. Children love this do–it–yourself project. Begin with good, organic seed. A little seed goes a long way!

When you cannot afford organic, it is important to make wise choices when purchasing produce. For a list of the worst and best choices for non–organic foods, visit www.foodnews.org/walletguide.php
R. S. in Valdez, Alaska

Florida Organics

I live in Royal Palm Beach (not to far from Boca) and almost exclusively buy organic foods for a family of three for about $150 to $200 every two weeks. Here is how I do it:

· I live within a five–mile radius of a Wal–Mart superstore, Target superstore, Publix, Winn–Dixie, Albertson's, BJ's wholesale club, and a Costco wholesale club. All of these stores sell organic foods. I look in the sales flyers for any organics on sale, write up a two–week menu, gather coupons, and head out. I first start at Wal–Mart. They are almost always the cheapest though Target often matches or comes close to their prices. Then I go to Target for anything I couldn't get at Wal–Mart. I usually finish

up at Publix for a few things. I rarely go to the other stores unless they are having a great sale on something or I can only get it there. When cruising the aisles at Wal–Mart, I keep an eye out for clearance foods in the aisles. I have gotten many good buys this way. At Target, I make sure to always go by the endcaps to see if there is anything worth getting. Also, I have a price list for all three stores for the items I buy regularly so if a price goes up I can see if it's cheaper at one of the other stores.

· Publix every so often puts out a flyer with their name brand of organic foods. This is a great time to stock up, especially on the canned goods.

· When buying certain brands of organic foods, there are often coupons on the box, etc. Cut them out and use them.

· Start eating more beans and less meat. Beans are a lot cheaper! I make at least two bean dinners a week, double the recipe, and freeze half for another time. Beans are also a great way to stretch recipes to get more from them. We've gotten to the point where we only eat meat once or twice a week, which is healthier for you anyway.

· Vegetables are also cheaper than meat. Look for recipes that have a lot of vegetables in them.

· Milk and bread freezes very well, so stock up when they go on sale.

· I bake a lot of my own breads and muffins and then freeze them for later use.

· Stick strictly to your shopping list and don't fall for impulse buys unless, of course, they are on clearance or unadvertised sale and you will use them soon. Remember to buy only what you really need or can use and then use it! It's no deal if it's sitting on the shelf for six months or you end up throwing it out because it went bad.

· In Boynton Beach, there is a farm called Green Cay Produce. They are a CSA farm (Community Supported Agriculture) where the produce is grown locally and can be delivered to your door or you can pick it up. There is a charge for delivery. You can get a large box or small box of produce. I get the large box and we were constantly overwhelmed by how much we get. I often share with neighbors. If you decide to go this route, make sure you get the right size box for your family. This is not an organic farm, but they use environmentally friendly growing practices that are often recommended for organic farms. I will tell you some of the best tasting produce I've ever had has come from this farm. For more information, visit their web site at http://www.veggies4u.com/.

· Another way to get organic produce is through the South Florida Organic Produce Buying Club. Members of the club have the produce delivered in bulk. It is about 20 percent below retail. The club has 15 members to a group. There is a host who divides each members share and you pick it up in a designated spot. There is already a group in Boca. For more information, visit their website at http://www.organicbuyingclubsofla.com/.

· You can also have organic food delivered to your door from Delicious Organics based in Miami. They have wild fish, chicken, meats, dairy, snacks, juice, nuts, chocolate, coffee and tea. There is a $50 minimum order with a $5 surcharge or $100 with no surcharge, plus a $9.95 delivery fee. They generally run about 20 percent lower than retail. For more information, visit their website at http://www.delicousorganics.com/.

Ruth in Royal Palm Beach

First, Simplify Your Menu

The key to organic is to simplify your menu first. Figure out what your family likes, or can live without, and go from there. Consider a garden to get the much needed tomatoes, green peppers, spinach, etc. in order to make the favorites for the family. Then learn to can and freeze your food properly. Consider canning the best recycling ever! Get canning equipment for next to nothing by just asking around, and maybe can with a friend to make it "less painful."

I gave up "convenience" foods, especially in the organic health food section. I can't rationalize mac and cheese el natural, when making it from scratch is way better and just as easy. Invest in simplified cookbooks that break it down to the basics, such as Moosewood Classics, Cheap, Fast, Good, Miserly Meals, and the indispensable Less is More Cookbook. These are the most used books in my cupboard because of the wide range of menus and simple ingredients.

Do some research online for local co–ops. I found a co–op 30 minutes away that delivers once every month, so I order flour, rice, oats, herbs, and dried fruit in bulk and it gets delivered to my door. If I don't think I'll use everything, I call some friends to split the food. It's a lot of fun and saves money buying bulk organics.

The biggest challenge I've found in organics is dairy. I have a hard time buying $4 gallons of milk or $6 chunk of cheese. Therefore, I analyzed my use of these ingredients and decided to add water to my whole milk, make my own yogurt, and change my attitude on good cheese (it's worth it to spend the $6). In the end, I'm no longer spending money on cereal (I make my own fabulous granola), junk food, or convenience food, so then I can afford a good, better tasting chunk of cheese
Heidi

Consider the Long–Term Benefits

I really struggle with this too! We want to serve our family the highest quality foods, but we also do not want to pay and arm and a leg for them. Here are some suggestions that I have used.

· First, recognize that buying high quality and/or organic products are better choices in the long run. Dr. Sears points out in his book The Healthiest Kid in the Neighborhood that in the long run children who eat better are healthier and thus save money on healthcare costs.

· Research which foods are the highest in pesticides and other chemical additives. For instance, apples and peaches are always important to buy organically, while bananas are not as high in pesticides. You can also research which areas are ones to stay away from (buy grapes grown in the U.S. instead of Chile due to higher amounts of pesticides used there).

· Come up with a general list of products you want to buy organically and look around at your local groceries. Find out which ones tend to have those products cheaper more regularly. Also, those tend to be the stores that have higher turnover rates for these products, which means that they are usually fresher.

· Conduct an Internet search for "organic coupons." You'll be surprised at how many you might find that way. If this does not yield you what you want, then go to each company's website. I wanted a coupon for Laura's Lean Beef, but there was not one on the website to print. I e–mailed them asking for one and they sent me some in the mail. I now am on their mailing list so that I continue to get deals. Also look in your Sunday Circulars for coupons. More and more companies are getting on the bandwagon and adding organic products to their lines.

· This spring start a home garden. Even a sunny spot on a terrace or deck can support a potted garden. Freeze or can what you have in excess. Also reap the bounty from friends and family's gardens. Offer to water while they are away on vacation in turn for being able to pick the garden during that time.

· In the appropriate seasons, visit farms that are organic where you can pick your own. We froze an abundance of raspberries this last season and are still enjoying them.

· Visit your local farmer's market or food co–op. Usually they are the cheapest places to buy produce. Remember that the fruits and veggies that have to travel across country to reach you have had many of their vitamins lost through oxidation. Locally grown produce is usually the best way to go. Plus, you are supporting the people of your area.

Gabrielle in Knoxville, TN

PRIVACY POLICY:

Privacy Policy:
In Summary:
The Organic Consumers Association does not sell, lease, give–away, disclose or otherwise release your email or other information to other organizations or individuals. Our practice is to send very minimal email, normally 2–3 per month.

In Detail:
The Organic Consumers Association is a non–profit, grassroots organization and receives contact information through various means, such as, online volunteer signup, donations, newsletter subscriptions, and other outreach. This contact information is used by our "individual coordinators" and "coalition partners" (NGO's/ organizations) around the United States and world to achieve our mission:

The Organic Consumers Association is a public interest organization dedicated to promoting health justice and sustainability. A central focus of the OCA is building a healthy, equitable, and sustainable system of food production and consumption. We are a global clearinghouse for information and grassroots technical assistance.

OCA may contact you concerning our work or the work of our coalition partners. We will not give your name to other organizations. You may be notified about participating with outreach educational activities such as: lectures, media interviews, demonstrations, teach–ins, phone trees, newsletters (Organic Bytes), website updates, leaflet distribution, book sales, etc.

Our volunteer management system is designed to allow you to participate with us in areas of your choosing. If you have not submitted/updated your choices, please do so in order for us to best work together.

National Grassroots Network:
We currently have over 850,000 people in our data base, including subscribers to our electronic newsletter, members, volunteers, and supporters, and 3000 cooperating retail coops, natural food stores, CSAs, and farmers markets.

Serves See list below
Eligibility Communities in Need
Service Temporary

Seedco takes a holistic approach to advancing economic opportunity by serving people, businesses, and communities in need around the United States.

In addition to our direct service work, we analyze, assess, and develop best practices to inform our work, as well as that of other practitioners, researchers, and policy makers. We provide technical assistance to federal, state and local governments; funders; and nonprofit agencies.

Seedco's programs serve the following individuals and organizations:

* Job Seekers and Workers
* Families and Individuals
* Businesses
* Government Agencies, Foundations, and Nonprofits
* Community–Based Organizations

Areas served (see updates at the website above):

* Alabama
* Arkansas
* Colorado
* Connecticut
* Florida
* Georgia
* Illinois
* Kentucky
* Louisiana
* Maryland
* Massachusetts
* Mississippi
* New Jersey
* New York

* Oklahoma
* Tennessee

from the website [see live links at the website]:

Seeding Sovereignty; an Indigenous–led collective, works to radicalize and disrupt colonized spaces through land, body, and food sovereignty work, community building, and cultural preservation. By investing in Indigenous folks and communities of the global majority, we cross the threshold of liberation together.

Rise with us. Grow with us.
What we're doing:
FACE THE FUTURE X FEAR THE KIDS MASK CAMPAIGN

FACE THE FUTURE X FEAR THE KIDS MASK CAMPAIGN
We're currently working to provide near 60,000 masks to Indigenous youth across 68 nations and 6 states after receiving a request from a representative at FEMA.

Join our buy one, give one mask drive and help to protect Indigenous students today!
MUTUAL AID artwork by Ade Cruz

MUTUAL AID artwork by Ade Cruz
In response to the escalating COVID–19 global pandemic Seeding Sovereignty has launched a long–term mutual aid program, now in its second phase called:

The Indigenous Impact Community Care Initiative.
LEARN ABOUT TRUTHSGIVING

LEARN ABOUT TRUTHSGIVING
November is recognized as Native American Heritage Month, a time that invites non–Natives to learn through the lived experiences of Indigenous folks throughout the so–called United States.
While many non–Natives celebrate Thanksgiving, our collective recognizes Truthsgiving.

DONATE TO INDIGENOUS IMPACT COMMUNITY CARE INITIATIVE FUND

Vulnerable communities are hit hardest by crises – especially those that purport to affect everyone.

Indigenous communities remaining strong and resilient during this global pandemic despite chronic, deep poverty, a youth suicide epidemic, violence to womxn, and myriad COVID–19 health complicating illnesses. Our communities will be last to receive desperately needed PPE, medical care and support.

Our Indigenous Impact Community Care Initiative works in partnership with Apache, Pueblo, and Navajo communities in New Mexico, in addition to Paiute, Lakota, Dakota, and Ojibwe communities around the country, where need is critical to immediately provide personal protective equipment and reusable masks to communities, distribute healthy food to elders and families, redistribute money to fund essential aid to those in need providing on–the–ground care to LGBTQIA+/Two Spirit and unsheltered relatives, and send Indigenous authored books to quarantined families.

We are committed to our intergenerational knowledge keepers and language bearers who sustain our communities, ways of knowing and provide grandparent and future ancestor medicine. Their Indigenous knowledge can help our global community during this climate crisis.

Indigenous peoples are on the frontlines and protect living forests, waterways and resist extractive projects for us all. During the COVID–19 crisis we are helping them first. Please join us!

from the website (see the site to get the referenced docs):

For just one moment, think of everything that gets flushed or rinsed down the drain in your home. In America, we don't separate our household and industrial waste so all the human waste, cleaners, poisons, soaps, and pharmaceutical combine with the waste of every business, industry, school and hospital to create a toxic stew that collects at one of over 16,000 waste water treatment plants (WWTP). Include in this mix the leachates from landfills, Superfund sites, and other industrial clean–up projects. This is sewage. The role of the WWTP is to separate the sewage solids from the liquids after treating with chemicals, minerals, squeezing and heating in order to release the water back into our communities. The solid by–product remaining after the water is removed from the sewage is called sludge. Sludge is tested for arsenic, cadmium, copper, lead, mercury, molybdenum, nickel, selenium, and zinc – the nine elements that the EPA requires for testing to determine if it is "safe" to apply to the land that supplies our food and the source of our water. Half of the 7 million tons of sewage sludge created annually in America is land applied.

Of the thousands of chemicals, pathogens, heavy metals, pharmaceuticals, and bacteria compressed into sludge, testing varies from once a month to once a year, depending on the size of the WWTP. Although the EPA then classifies Class A sludge as "pathogen free" and Class B sludge as "pathogen–reduced" (based on only nine elements) no substantial studies have EVER been conducted by federal, state, or local officials to determine if sludge is safe to for human use. Municipalities pay a hefty sum for sewage haulers to dispose of the sludge, with some of the largest sewage disposal companies making over five hundred million dollars annually to find a place to throw Americas sewage waste. And by changing their name from 'Federation of Sewage Workers Association" to the cozier, "Water Environmental Federation" and calling sludge "biosolids" the industry who is paid to remove our waste from the communities of American has quietly eased its way onto our open space and farmlands.

So, what happens to all that sludge? Since ocean dumping was stopped in the United States by environmental groups in the 1980's, because of the dead zones the sludge created in our oceans, disposal options most often used in America include landfill, incineration, and "land application". What is "land application"? Because of measurable amounts of elements like nitrogen and phosphorous, the sludge industry and government bodies overlook the toxins in sludge and market the sewage by–product as fertilizer. Class A sludge is spread in our parks, golf courses, playgrounds, and forests and sold to the gardening public as bagged fertilizer. The amount of sludge that is land applied varies from state to state depending on how strict the laws are.

Class A sludge is marketed, and delivered free of charge, to thousands of farmers in 26 states as a fertilizer option. As the price of fuel and petroleum based fertilizers squeeze farm budgets, and farmers are only told of the benefits of free sludge, the temptation to apply sludge to farmland increases. Food crops may be grown in fields treated with Class A sludge without testing the products for levels of pathogens, heavy metals, or pharmaceuticals in spite of the fact that plants uptake nutrients and toxins

from the soil. Meat and dairy animals may graze in fields treated with Class A sludge without testing the product in spite of the fact that heavy metals, hormone mimickers and chemicals collect in muscle and fat tissue.

In most states, the generator of the sludge is required to obtain a permit to spread sludge on farm fields. Farmers or landowners who use the Class B sludge are required to prepare and implement a Farm Conservation Plan with the appropriate Best Management practices approved by the County Conservation District. All of these terms sound great, but “permitting” toxic waste to be poured on our food and water does nothing to protect our health, safety, food or future. If you can farm it, you can sludge it. Depending on the size of the waste water treatment plant, testing of sludge is required once a month to once a year. Food products must maintain a waiting period between the time of sludging and growing, while non–food products may be grown directly on Class B sludged land. Although easily ignored, the nutrient/toxin uptake in products like hay or cotton should not be underestimated. Hay products are fed to meat animals and livestock or used to grow food products and cotton seed is used to create food quality oil. Again, testing is done to “prove” the nutrient value of sludge for plants, but no substantial scientific studies has been done on the hazards or safety of sludge on human health. While towns and cities struggle to control high levels of toxins, bacteria and hormone mimickers in their municipal water supply and homeowner's private wells come up polluted, suspicions turn to the corporate sludging industries, which shrug shoulders and say, "Prove it!" There is no state or national data collection of health or safety concerns from citizens and communities that are forced to accept sewage sludge.

Plants aren't the only thing growing from sludge. Illnesses and health problems –including nausea, vomiting, burning eyes, congestion, various infections, and respiratory problems – have been recorded and continue to grow in communities throughout the country. Three deaths are linked to land application of sludge. When the sludge is dry, and the dust can be inhaled by any resident or passing commuter, the smell is relatively mild. When the rains come or the sludge is wet the smell, akin to rotting flesh, can gag the sturdiest stomach or instigate asthma attacks in adults and children. Every community surrounded by sludged properties, struggles to protect themselves. Elected officials and the Environmental Protection Agency (EPA) are unwilling to change the laws that allow and promote the relentless flinging of Americas toxic goo on lands that provide our food and water. Sludge is not a farm or environmental issue – sludge is a health and safety issue.

Even those who do not live in farm communities question the safety of our food and water supply. When our meats are tainted, our tomatoes are laced with salmonella, our spinach is rife with E. Coli and milk from one Georgia farmer tested 120 higher than legal limit for thallium – a substance found in rat poison – America is beginning to recognize that something is seriously wrong. Scientific studies and warnings are ignored or changed to support a system that encourages pollution transfer on a massive scale, at the detriment of America's health and democracy. Should we be fighting to prove that we are being poisoned by an obvious pollution source or should we be re–evaluating our sewage sludge disposal options as an alternative energy source? Asking serious questions about responsibilities of our disposal system and its connection to our food and water sources is just the beginning of recognizing our role in what happens next to our health, wealth and happiness. Are you ready to get involved? What is your food and water safety worth? What future will our children inherit?
Smart Guide on Sludge Use and Food Production

Institute for Agriculture and Trade Policy's comprehensive, approachable and well–referenced overview about the concerns of land application of sewage sludge: What's in sludge? How can contaminants from sludge end up in our food? What's the concern? What is the Government's role and What Can You Do? The best 'one–stop' paper on the concerns of sewage sludge to the health and safety of our food, water and communities. (pdf)

Potential Health Impact of Certain Persistent and Other Chemicals Detected in Sludge

Institute for Agriculture and Trade Policy chart linking health impacts and the chemically associated with their exposure. (pdf)

Crapshoot: the Gamble with Our Wastes

The National Film Board of Canada has an award–winning 52 minute documentary on sewage and sludge. A hazardous mix of waste is flushed into the sewer every day. The billions of litres of water – combined with unknown quantities of chemicals, solvents, heavy metals, human waste and food – where does it all go? And what does it do to us? The entire film is now available for viewing free on the internet on the NFB website.

The Dirty Work of 'Recycling' America's Sewage Sludge

Cornerstone work by Caroline Snyder, Ph.D., investigating the serious illnesses, including deaths, and adverse environmental impacts linked to land application of sewage sludge. In depth investigation of the link between the US EPA, the wastewater treatment industry and Congress to fund industry–friendly scientists and discouraging independent research, to prevent local governments from restricting land application and to thwart litigation against municipalities and the industry. (pdf)
Sludge Happens

Josh Harkinson of Mother Jones Magazine looks at the issues. In theory, recycling poop is the perfect solution to the one truly unavoidable byproduct of human civilization. But as sludge has spread across the country, so have concerns that it may cause as many environmental problems as it solves. Read article

Crap Happens: A Grist Special Report on How We Dispose of Our Poop – A Grist Special Series

Catherine Price's four–part series on sludge fertilizer. Grab some extra toilet paper and get ready for some straight poop on poop including: "Sludge, farmer's friend or toxic slime?", "Regulating biosolids", "Businesses struggle to profit from sewage sludge", and "For some eco–pioneers, solving the sludge problem means getting their hands dirty." Read articles
Raking through Sludge Exposed a Stink

Jeff Tollefson of Nature News Magazine explores questions that remain about sludge's impact on human and animal health – the program has been the subject of multiple lawsuits for more than a decade – including law suits by an EPA whistleblower and two Georgia dairy farmers who lost their farms. (pdf)

disposing of the billions of gallons of contaminated wastewater the industry???

Each well will produce about 1.2 million gallons of wastewater that can contain chemicals introduced during the drilling process and dredged up from deep within the earth. Using the state's higher estimate, that means the industry will have to find a way to dispose of as much as 3 billion gallons a year, enough to fill 5,000 Olympic–sized swimming pools.

NEWMOA
The Northeast Waste Management Officials' Association (NEWMOA) is a nonprofit, nonpartisan interstate association that has a membership composed of the hazardous waste, solid waste, waste site cleanup, and pollution prevention program directors for the environmental agencies in Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, and Vermont. NEWMOA was established by the Governors of the New England states as an official regional organization to coordinate interstate hazardous and solid waste, pollution prevention, and waste site cleanup activities, and was formally recognized by the U.S. Environmental Protection Agency (EPA) in 1986.

Databases and Tools

EPA makes available numerous databases and tools related to emergency management. These resources are designed to help first responders address emergency situations, assist facilities in complying with emergency management regulations, and give the public an improved understanding of chemicals in their community.
